SYLLABUS

1.1 Higher education institution Babeş Bolyai University 1.2 Faculty Faculty of Mathematics and Computer Science 1.3 Department Department of Mathematics 1.4 Field of study **Computer Science** 1.5 Study cycle Master 1.6 Study programme / Qualification High Performance Computing and Big Data Analytics

1. Information regarding the programme

2. Information regarding the discipline

2.1 Name of the discipline			Optimization models					
2.2 Course coordinator			As	Assoc. Prof. Nicolae Popovici, Ph.D.				
2.3 Seminar coordinator			As	Assoc. Prof. Nicolae Popovici, Ph.D.				
2.4. Year of study	1	2.5 Semester		2.6. Type of evaluation	Exam	2.7 Type of discipline	Optional	

3. Total estimated time (hours/semester of didactic activities)

3.1 Hours per week	3	Of which: 3.2 course	2	3.3 seminar	1
3.4 Total hours in the curriculum		Of which: 3.5 course	28	3.6 seminar	14
Time allotment:					
Learning using manual, course support, bibliography, course notes 56					
Additional documentation (in libraries, on electronic platforms, field documentation)					
Preparation for seminars/labs, homework, papers, portfolios and essays					28
Tutorship					
Evaluations					
Other activities:					-
3.7 Total individual study hours		133			•
3.8 Total hours per semester		175			

4. Prerequisites (if necessary)

3.9 Number of ECTS credits

4.1. curriculum	Mathematical foundations of decision-making process	
	Mathematical Analysis	
	Dynamical Systems	
4.2. competencies	Basic knowledge of linear optimization, convex analysis, differential	
	calculus, and dynamical systems	

7

5. Conditions (if necessary)

5.1. for the course	
5.2. for the seminar /lab	
activities	

6. Specific competencies acquired

Professional competencies	•	Ability to understand and manipulate advanced concepts and results in the field of optimization theory. Ability to use mathematical methods and implementable algorithms for solving optimization problems.
Transversal competencies	•	Ability to model and analyze from a mathematical point of view practical optimization processes from other sciences, economics and engineering.

7. Objectives of the discipline (outcome of the acquired competencies)

7.1 General objective of the discipline	The aim of this course is to present classical as well as modern optimization models, from both theoretical and practical points of view	
7.2 Specific objective of the	Students should acquire knowledge about:	
discipline	Integer programming	
	Multicriteria optimization	
	Transportation problems.	
	• Nonlinear optimization models; numerical methods for solving unconstrained or constrained optimization problems (gradient methods, penalty and barrier functions methods).	
	• Dynamic programming models; applications to economics and network-type problems.	
	Optimization models via calculus of variations.	

8. Content

8.1 Course	Teaching methods	Remarks
1. Classical models of optimization	Direct instruction,	
	mathematical proof,	
	exemplification	
2. Special instances of linear optimization; integer	Direct instruction,	
programming; the Gomory algorithm	mathematical proof,	
	exemplification	
3. Multicriteria linear optimization; the weighted-	Direct instruction,	
sum scalarization method	mathematical proof,	
	exemplification	
4. Bicriteria linear optimization; the parametric	Direct instruction,	
scalarization method	mathematical proof,	
	exemplification	
5. Transportation problems; statement of the	Direct instruction,	
problem and existence of solutions	mathematical proof,	
	exemplification	
6. Graphs associated to a transportation problem	Direct instruction,	
	mathematical proof,	
	exemplification	
7. Numerical solution of transportation problems	Direct instruction,	
	mathematical proof,	
	exemplification	

	I	
8. Nonlinear optimization problems; optimality	Direct instruction,	
conditions	mathematical proof,	
	exemplification	
9. Gradient methods for solving unconstrained	Direct instruction,	
optimization problems	mathematical proof,	
	exemplification	
10. The penalty function method for solving	Direct instruction,	
constrained optimization problems	mathematical proof,	
	exemplification	
11. The barrier function method for solving	Direct instruction,	
constrained optimization problems	mathematical proof,	
	exemplification	
12. Dynamic optimization models; the Bellman's	Direct instruction,	
principle of dynamic optimization and	mathematical proof,	
applications to economics and network-type	exemplification	
problems.		
13. Optimization models via calculus of variations:	Direct instruction,	
preliminary results concerning integrals	mathematical proof,	
depending on parameters; the fundamental	exemplification	
Lemma in variational calculus		
14. The fundamental problem of the calculus of	Direct instruction,	
variations; the Euler equation and some of its	mathematical proof,	
special cases; applications.	exemplification

9. Corroborating the content of the discipline with the expectations of the epistemic community, professional associations and representative employers within the field of the program

The course ensures a solid theoretical background, according to national and international standards

10. Evaluation

Type of activity	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Share in the grade (%)
10.4 Course	 Knowledge of theoretical concepts and capacity to rigorously prove the main theorems; Ability to solve practical exercises and theoretical problems 	Written exam	70%
10.5 Seminar/lab activities	- Attendance and active class participation	Continuous evaluation	30%
10.6 Minimum performance	ce standards		
The grade [as weighted av	erage (70 * Written exam +30) * Continuous evaluation)/10	0] should be greater
than or equal to 5.
