SYLLABUS

1. Information regarding the programme

1.1 Higher education institution	Babeş Bolyai University
1.2 Faculty	Faculty of Mathematics and Computer Science
1.3 Department	Department of Computer Science
1.4 Field of Study	Computer Science
1.5 Study Cycle	Master
1.6 Study Programme/Qualifications	High Performance Computing and Big Data Analytics

2. Information regarding the discipline

2.1 Name of the discipline			Stochastic Simulation Methods with Interdisciplinary Applications					
2.2 Course coordinat			Prof. Dr. Zoltán Néda					
2.3 Seminar coordina	ator							
2.4 Laboratory coord	linat	tor	Prof. Dr. Zoltán Néda					
2.5 year of study	2	2.6 semester	4	2.7 Type of evaluation	E	2.8 Type of Discipline Op		

3. Timpul total estimat (ore pe semestru al activităților didactice)

3.1 Hours per week		Of which:		
3.2 course	3	3.3 seminar	3.4 laboratory	2
3.5 Total hours in the curriculum		Din care:		•
3.6 course		3.7 seminar	3.8 laboratory	
Time allotment:				ore
Learning using manual, course support, bibliography, course notes				
Additional documentation (in libraries, on electronic platforms, field documentation)				14
Preparation for seminars/labs, homework, papers, portfolios and essays				42
Tutorship				3
Evaluations				4
Other activities:				-
3.9 Total individual study hours 10)5			
3.10 Total hours per semester 16	51			

4. Prerequisities

3.11 Number of ECTS credits

4.1 curriculum	Statistical Physics, C Programming, Elements of Probability Theory and Mathematical Statistics
4.2 competencies	Logical thinking, interdisciplinay thinking, communication abilities in English, active participation at the courses and laboratories

5. Conditions

5.1 for the course	Video projector, blackboard
5.2 for the seminars	
5.3 for lab activities	Computers with Linux operating system, Vidoe projector

6. Specific competencies acquired

- C1. Capacities for analyzing and synthetizing physical data, capacities for modelling complex phenomena
- **C2.** Working and mastering with software packages for analyzing and processing experimental data. Using C, Python and Mathematica software for modelling complex phenomena. Capacities for using information technologies in describing complex phenomena from physics, biology, chemistry and social sciences. Advanced programming techniques.
- **C3.** Trans- and Interdisciplinary thinking.
- **C4.** Planning and Performing computer experiments for validating physical models. Abilities for making high performance computations in physics. Capacieties for writing computer codes and running them on modern supercomputers.
- **C5.** Communicating efficiently modern scientific ideas. Presenting in a professional manner results of a research or scientific projects. Capacities for writing scientific publications, to interact and have a scientific debate with Editors and Referees. omunicarea ideilor stiințifice complexe, a concluziilor experimentelor sau a rezultatelor unui proiect științific. Capacities for arguing and defeneding scientific views and ideas.
- **CT1.** To deal with professional duties efficiently and in a responsible manner, keeping in mind the laws and scientific ethics. Being responsible for the published scientific results and taking all actions for their proper use.
- **CT2.** Working in an Interdisciplinar environment respecting the professional hierarchy. Having initiative, new ideas and approaches to classical problems. Promoting the dialogue, cooperation and positive attitude in a group. Respecting multicultural environment and helping the others.
- **CT3.** Efficient use of information tehnology tools and presentation methods in English. Learning and applying autoevaluation methods, f or keeping the professional training up to date, in agreement with the deminds of the market.

7. Objectives of the discipline

7.1 General objective of the discipline	- a rigorous introduction in MC simulation methods, oriented on	
	interdisciplinary applications.	
7.2 Specific objective of the discipline	- mastering stohastic simulation methods and physical modelling	
	- learning to approach modern problems in an interdisciplinary manner	
	- using classical models of physics in approaching interdisciplinary	
	problems.	
	- advance programming in C and C++	
	- an introduction to scientific research	

8. Content

8.1 Course	Teaching methods	Observations	
Computer simulation techniques – an	Problem formulation	-role of Monte Carlo (MC) simulations	
overview	Presentation	in physics	
	Demonstartations	- Monte Carlo simulations versus	
	Software packages Molecular Dynamics (MD) method		
	Discutions	- the interdisciplinar applicability of the	
	Movies	MC methods

9. Corroborating the content of the discipline with the expectations of the epistemic community, professional associations and representative employers within the field of the program

The syllabus and the studied material is in agreement with similar courses from other universities in Romania and abroad. For helping the integration with the deminds of the work-force market, the syllabus was harmonized with the deminds of the pre-university and university educations, of those of research institutes and the business sector.

10. Evaluation

Type of activity	10.1 Evaluation criteria	10.2 Evaluation	10.3 Percent in the final grade
		method	
10.4 Course	knowledge of the tought material	Exam	55%
	application of the tought material		
10.5 Seminar			
10.6 Laboratory	Solving the proposed exercises	Colloquium	25%
	Realization degree and presentation	Colloquium	20%
	of the research project		

10.7 Minimal performance standard

Understanding the methods presented at the course and laboratory. Addressing the laboratory requirements in proportion of at least 75%. Successful Developing a project of medium complexity.
