SYLLABUS

1. Information regarding the programme

1.1 Higher education institution	"Babes_Bolyai" University
1.2 Faculty	Faculty of Mathematics and Computer science
1.3 Department	Department of Computer Science
1.4 Field of study	Informatics(Computer Science)
1.5 Study cycle	Master
1.6 Study programme / Qualification	Component based programming

2. Information regarding the discipline

2.1 Name of the discipline Models in Parallel Programming							
2.2 Course coordinator Assoc.Prof.PhD. Niculescu Virginia							
2.3 Seminar coordinator				Assoc.Prof.PhD. Niculescu Virginia			
2.4. Year of study		2.5 Semester		2.6. Type of evaluation	Е.	2.7 Type of discipline	Compulsory

3. Total estimated time (hours/semester of didactic activities)

3.1 Hours per week	3	Of which: 3.2 course	2	3.3 seminar/laboratory	1 sem.
3.4 Total hours in the curriculum	42	Of which: 3.5 course	28	3.6 seminar/laboratory	14
Time allotment:					hours
Learning using manual, course support, bibliography, course notes					20
Additional documentation (in libraries, on electronic platforms, field documentation)					10
Preparation for seminars/labs, homework, papers, portfolios and essays					23
Tutorship					7
Evaluations					20
Other activities:					-

3.7 Total individual study hours	80
3.8 Total hours per semester	150
3.9 Number of ECTS credits	6

4. Prerequisites (if necessary)

4.1. curriculum	Algorithmics, Object-oriented and functional programming
4.2. competencies	 Programming skills and basic abilities for dealing with abstractions

5. Conditions (if necessary)

5.1. for the course	• projector
5.2. for the seminar	• projector

6. Specific competencies acquired

Professional competencies	•	Knowledge, understanding of the basic concepts of parallel programming. Ability to work independently and/or in a team in order to solve problems in defined professional contexts (models). Knowledge, understanding of the theoretical foundations of parallel algorithms construction.
Transversal	•	Ability to solve problems using parallel programming. Ability to do research work in the domain of the parallel programming by studing a particular model of parallel computation.

7. Objectives of the discipline (outcome of the acquired competencies)

7.1 General objective of the discipline	Each student has to prove that (s)he acquired an acceptable level of knowledge and understanding of the subject, that (s)he is capable of stating these knowledge in a coherent form, that (s)he has correct habits of analysis, design, and implementation using different models of parallel computation.
7.2 Specific objective of the discipline	 To present the basic paradigms of parallel programming . To offer different models of parallel programs development and understanding their necessity and their advantages. To create the ability to correctly develop parallel algorithms using different models of parallel computation (algorithms from linear algebra, numerical analysis, graph, searching and sorting algorithms)

8. Content

8.1 Course	Teaching methods	Remarks
 General Introduction to parallel programming: reasons for using parallel programming; problems and difficulties in parallel programming; the necessity of using models Parallel Computer Architectures - Taxonomies 	Exposure: description, explanation, examples, discussion of case studies	
 2. Types of parallelism Implicit parallelism Explicit Parallelism Data-parallel model Message-passing model Shared-variable model Task Dependency Graph, Task Interaction Graph, 	Exposure: description, explanation, examples, discussion of case studies	

Degree of Concurrency, Granularity, Mapping	
Phases in parallel programs development (PCAM) Partitioning, Communication, Agglomeration, Mapping	Exposure: description, explanation, examples, discussion of case studies
Decomposition - functional (task decomposition) - of the domain(geometrical) - data-distributions	
4. Interconnection networks	Exposure: description, explanation, examples, discussion of case studies
5. Shared Memory Parallel Programming Synchronization problems OpenMP	Exposure: description, explanation, examples, discussion of case studies
6. Distributed Memory Parallel Programming - MPI	Exposure: description, explanation, examples, discussion of case studies
7. PRAM models Computational networks Brent Theorem	Exposure: description, explanation, examples, discussion of case studies
8. Analytical Modeling of Parallel Systems Scalability	Exposure: description, explanation, examples, discussion of case studies
9. Parallel programming paradigms - Master-slaves - Task-Farm - Work-Pool - Divide &Conquer - Pipeline	Exposure: description, explanation, examples, discussion of case studies
Bulk Synchronous Parallel programming - BSP - LogP	Exposure: description, explanation, examples, discussion of case studies
 10. Functional parallel programming Bird-Meertens Formalism (BMF). List Homomorphisms Categorical Data Types Map-Reduce Model 	Exposure: description, explanation, examples, discussion of case studies
 11. Pares – A Model for Parallel Recursive Programs. Special data structures of parallel recursion: PowerLists, ParLists, PLists 	Exposure: description, explanation, examples, discussion of case studies

 12. Interleaving/ Nondeterminancy/ Formal Methods UNITY "Unbounded Nondeterministic Iterative Transformations" model CSP(Communicating Sequential Processes) model 	Exposure: description, explanation, examples, discussion of case studies	
13. General presentation of the parallel computation	Exposure: description, explanation, examples,	
models (PCM).	discussion of case studies	
o Requierements for PCM		
o Classification:		
- implicit parallelism		
- implicit decomposition		
- explicit decomposition		
- explicit mapping		
-explicit communication		
- everything explicit		
Main Categories of Models		
Classification/Comparison of the models for		
parallel computation.

8.2 Seminar	Teaching methods	Remarks
Simple examples of parallel programs.	Explanation, dialogue, case studies	The seminar is structured as 2 hours classes every second week

Tehniques used in parallel programs construction.	Dialogue, debate, case studies, examples, proofs
3. PRAM - examples	Dialogue, debate, case studies, examples, proofs
4. MPI and OpenMP examples	Dialogue, debate, explanation, examples
5. Student presentations	Dialogue, debate, explanation, examples
6. Student presentations	Dialogue, debate, explanation, examples
7. Student presentations	Dialogue, debate, explanation, examples

9. Corroborating the content of the discipline with the expectations of the epistemic community, professional associations and representative employers within the field of the program

- The course respects the IEEE and ACM Curricula Recommendations for Computer Science studies;
- The course exists in the studying program of all major universities in Romania and abroad;

10. Evaluation

Type of activity	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Share in the grade (%)
10.4 Course	- know the basic principles and paradigms of the domain;	Written exam	50%

10.5 Seminar	- a research paper (referat) that presents a model of parallel computation	-presentation -discussion	50%			
10.6 Minimum performance standards						
➤ At least grade 5 (from a scale of 1 to 10) at both written exam and research paper.						
Date	•	gnature of course coordinator Signature of seminar coordinatorNiculescu VirginiaNiculescu Virginia				
Date of approval		Signature of the head of department
