SYLLABUS

1. Information regarding the programme

1.1 Higher education	Babeş-Bolyai University of Cluj-Napoca		
institution			
1.2 Faculty	Faculty of Mathematics and Computer Science		
1.3 Department	Departament of Computer Science		
1.4 Field of study	Computer Science		
1.5 Study cycle	Master		
1.6 Study programme /	Applied Computational Intelligence		
Qualification			

2. Information regarding the discipline

2.1 Name of the discipline Machine Learning								
2.2 Course coordinator Prof. PhD Czibula Gabriela								
2.3 Seminar coordinator				Prof. PhD Czibula Gabriela				
2.4. Year of	1	2.5	1	2.6. Type of E 2.7 Type of Compulsory				
study		Semester		evaluation discipline				

3. Total estimated time (hours/semester of didactic activities)

3.1 Hours per week	4	Of which:	3.2 course	2	3.3	1	
					seminar/laboratory	sem+	
						1pr	
3.4 Total hours in the curriculum	56	Of which:	3.5 course	28	3.6	28	
					seminar/laboratory		
Time allotment:						hours	
Learning using manual, course support, bibliography, course notes						26	
Additional documentation (in libraries, on electronic platforms, field documentation)						36	
Preparation for seminars/labs, homework, papers, portfolios and essays					35		
Tutorship						12	
Evaluations						10	
Other activities:							
27 T . 1 . 1 . 1 . 1 . 1 . 1 . 1 . 1 . 1 .							

3.7 Total individual study hours	119
3.8 Total hours per semester	175
3.9 Number of ECTS credits	7

4. Prerequisites (if necessary)

4.1. curriculum	
4.2. competencies	

5. Conditions (if necessary)

5.1. for the course	
5.2. for the seminar /lab	Laboratory with computers; high level programming language
activities	environment (.NET or any Java environement a.s.o.)

6. Specific competencies acquired

Professional competencies	 Advanced ability to approach, model and solve phenomena and problems from nature and economy using fundamental knowledge from mathematics and computer science. Ability to approach and solve complex problems using various techniques of computational intelligence.
Transversal competencies	 Ethic and fair behavior, commitment to professional deontology Team work capabilities; able to fulfill different roles Professional communication skills; concise and precise description, both oral and written, of professional results, negotiation abilities. Entrepreneurial skills; working with economical knowledge; continuous learning Good English communication skills

7. Objectives of the discipline (outcome of the acquired competencies)

7.1 General objective of the discipline	To provide an introduction to the basic principles, techniques, and applications of Machine Learning.
7.2 Specific objective of the discipline	 To cover the principles, design, implementation and validation of learning programs which improve their performance on some set of tasks by experience. To offer a broad understanding of machine learning algorithms and their use in data-driven knowledge discovery and program synthesis. To offer an understanding of the current state of the art in machine learning in order to conduct original research in machine learning.

8. Content

8.1 Course	Teaching methods	Remarks
1. Introduction in Machine Learning.	Interactive exposure	
 Issues in Machine Learning 	Explanation	
 Designing a learning system 	Conversation	
• Example	Didactical	
	demonstration	
2. Statistical foundations	Interactive exposure	
 Event space and Probability function 	Explanation	
Elementary Information Theory	Conversation	
• Examples	Didactical	
	demonstration	
3. Decision Tree learning	Interactive exposure	
 Decision tree representation 	Explanation	
 ID3 learning algorithm 	• Conversation	
 Statistical measures in decision tree 	Didactical	
learning: entropy, information gain	demonstration	
 Issues in DT learning 		
 Applications 		

A A 4'0" . 1 NT 1 NT . 4 1	
4. Artificial Neural NetworksNeural Network representations	Interactive exposureExplanation
Appropriate problems for Neural Network	• Conversation
Learning	B11 1 1
Perceptrons	
<u> </u>	demonstration
Multilayer Networks and the Real propagation algorithm	
Backpropagation algorithm	
 Advanced topics in Artificial Neural Networks 	
5. Support Vector machines	• Interactive expenses
Main idea	• Interactive exposure
Main ideaLinear SVMs	• Explanation
	• Conversation
Non-linear SVMs	• Didactical
• Applications	demonstration
6. Bayesian learning (1)	• Interactive exposure
Specific problems	• Explanation
Bayes theorem On the control of the control o	• Conversation
Naive Bayes Classifier	Didactical
	demonstration
7. Bayesian learning (2)	• Interactive exposure
Bayesian Belief Networks	Explanation
EM algorithm	Conversation
• Examples	Didactical
	demonstration
8. Instance based learning (1)	Interactive exposure
• <i>k</i> -Nearest Neighbor learning	Explanation
Locally weighted regression	Conversation
 Applications 	Didactical
	demonstration
9. Instance based learning (2)	Interactive exposure
Radial basis functions	Explanation
Case based reasoning	Conversation
	Didactical
	demonstration
10. Unsupervised Learning (1)	Interactive exposure
Cluster analysis	Explanation
 Self organizing maps 	Conversation
	Didactical
	demonstration
11. Unsupervised Learning (2)	Interactive exposure
Hebbian learning	Explanation
 Applications 	Conversation
	Didactical
	demonstration
12. Reinforcement Learning	Interactive exposure
The reinforcement learning task Madaga Parising Paragasata	Explanation
Markov Decision Processes	Conversation
Q-learning Tomporal Difference learning	Didactical
Temporal Difference learningApplications	demonstration
13. ML research reports presentation	Interactive exposure
20.1.22 research reports presentation	Conversation
14 MI research reports presentation	
14. ML research reports presentation	Interactive exposure

Conversation

8.2 Seminar / laboratory	Teaching methods	Remarks
		The lab is structured as
		2 hours classes every
		second week
1. Administration of labs. Survey of the sources of	• Interactive exposure	
information available on Internet and Intranet	Explanation	
	 Conversation 	
2. Survey of the sources of information available on	 Documentation 	
Internet and Intranet; chosing the paper topic and	Explanation	
scheduling the presentation.	Conversation	
The first software project (Project 1) will be		
developed using an open source ML software. The		
second project (Project 2) will be fully implemented,		
without using existing ML environments.		
3. Installation of ML software; description of the	Lab assignment	
programming software used, including used features	Explanation	
	Conversation	
4. Problem definition	Lab assignment	
	Explanation	
	 Conversation 	
5. Project 1 demonstration and comments about the	Lab assignment	
solution; problem definition for Project 2	Explanation	
	• Conversation	
6. Comments about the solution and problem analysis	Lab assignment	
for Project 2	Explanation	
	• Conversation	
7. Design documentation; the electronic version of the	Lab assignment	
source code, test files and any other files required to	Explanation	
test Project 2. Project 2 demonstration	Conversation	

Bibliography

9. Corroborating the content of the discipline with the expectations of the epistemic community, professional associations and representative employers within the field of the program

The content of the discipline is consistent with the similar disciplines from other romanian universities and

universities from abroad, as well as with the requirements that potential employers would have in the machine learning field.

10. Evaluation

Type of activity	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Share in the grade (%)
10.4 Course	A theoretical research report on a learning technique, based on some recent research papers should be prepared and presented	Evaluation of the research report (a written paper of about 10 pages and an oral presentation)	20%
	The correctness and completeness of the accumulated knowledge.	Written exam (in the regular session)	30%
	Class attendance	4 unmotivated absences are accepted, but each unmotivated absence other than those specified above are penalised	10%
10.5 Seminar/lab activities	A software project developed using an open source ML software	Evaluation of the project (documentation and demonstration)	20%
10.6 Minimum performance	A software project fully implemented, without using existing ML environments.	Evaluation of the project (software implementation, documentation and demonstration)	20%

10.6 Minimum performance standards

- Each student has to prove that (s)he acquired an acceptable level of knowledge and understanding of the Machine Learning domain, that (s)he is capable of stating these knowledge in a coherent form, that (s)he has the ability to establish certain connections and to use the knowledge in solving different problems.
- Successful passing of the exam is conditioned by the final grade that has to be at least 5.
