

Lecture #14

Testing Frameworks & Exam Discussions

Mobile Applications
Fall 2024

Types of Testing Software

- 
- System Testing
 - Smoke testing
 - System Integration Testing
 - Usability testing
 - Unit testing
 - User Acceptance testing
 - Soak Testing
 - Ad-hoc testing
 - Security Testing
 - Performance Testing
 - All Pairs testing
 - Acceptance Testing
 - Sanity Testing
 - Regression Testing
 - Load Testing
 - Beta Testing
 - Glass box Testing
 - Stress Testing
 - Risk-based Testing
 - Black Box testing
 - Accessibility Testing
 - Static Testing
 - Localization Testing
 - Backward Compatibility Testing
 - Agile Testing
 - Stability Testing
 - Negative Testing
 - Boundary Value Testing
 - API Testing
 - Big Bang Integration testing
 - Automated testing
 - Scalability Testing
 - Non-functional testing
 - Bottom up Integration testing
 - Branch Testing
 - Gorilla Testing
 - Volume testing
 - Pair Testing
 - Vulnerability Testing
 - Keyword-driven Testing
 - Browser compatibility Testing
 - Component Testing
 - White box Testing
 - End-to-end Testing
 - Compatibility testing
 - Condition Coverage Testing
 - Dynamic Testing
 - Exploratory Testing
 - Happy path testing
 - Integration Testing
 - Decision Coverage Testing
 - Internationalization Testing
 - Functional Testing
 - Fuzz Testing
 - Interface Testing
 - GUI (Graphical User Interface) testing

<https://www.testingexcellence.com/types-of-software-testing-complete-list/>

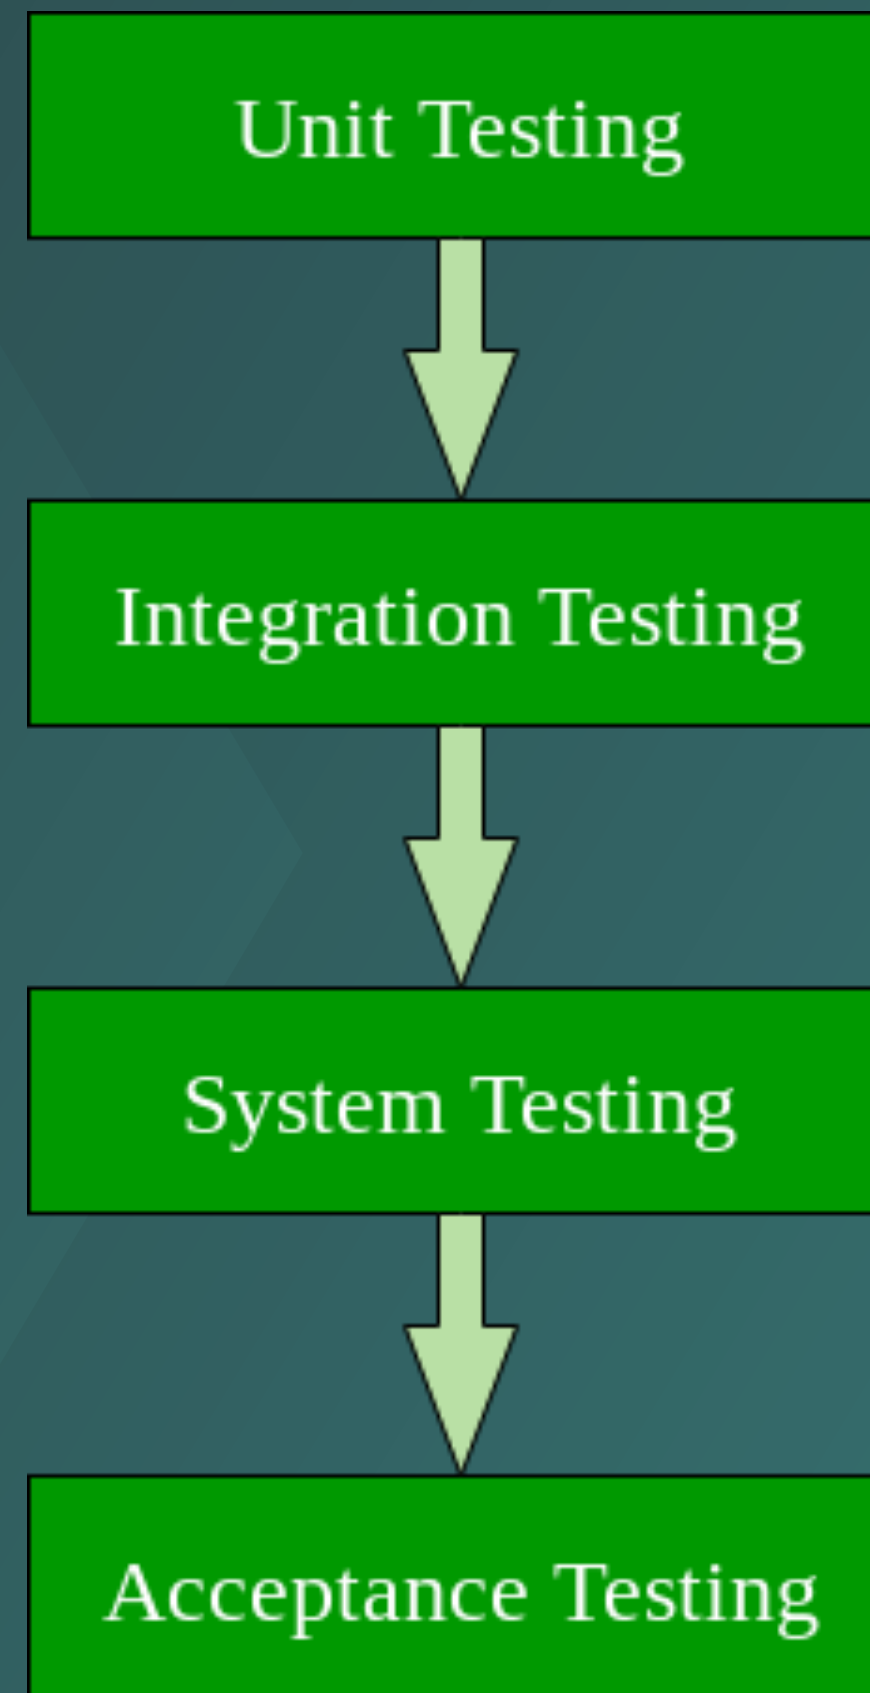

Types of Testing Software

Software Testing can be broadly classified into two types:

- Manual Testing
- Automation Testing

Automation Testing Levels

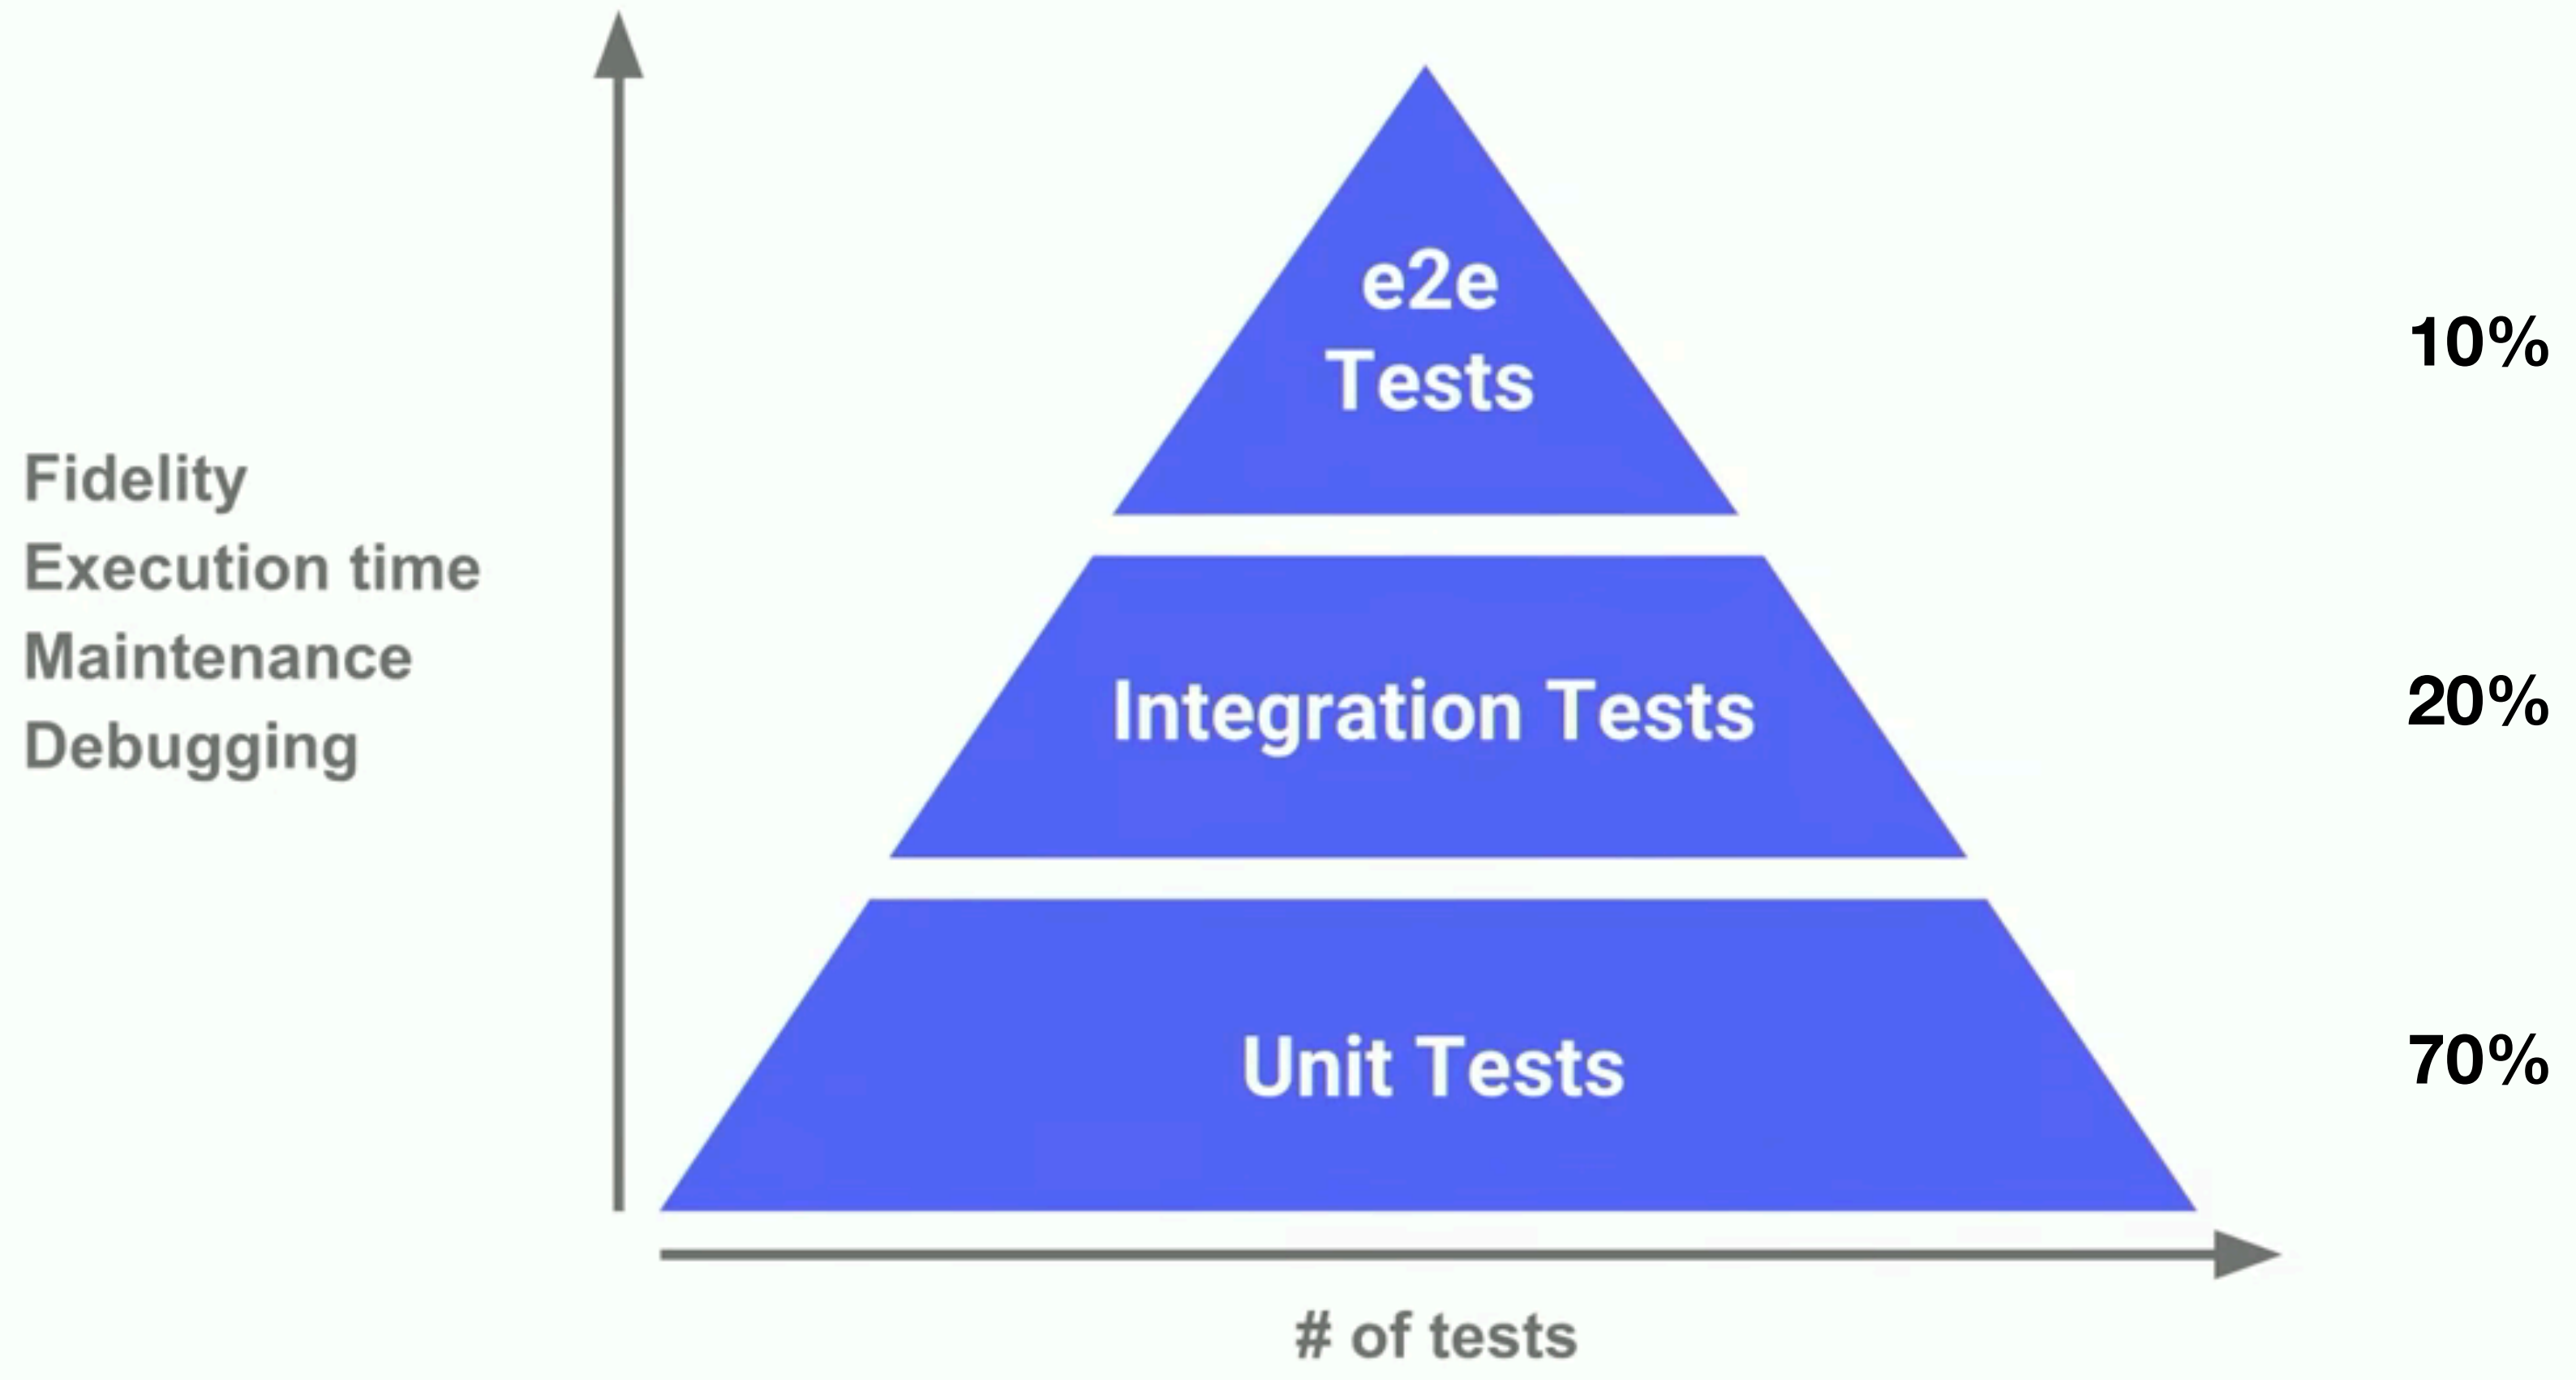

Advantages

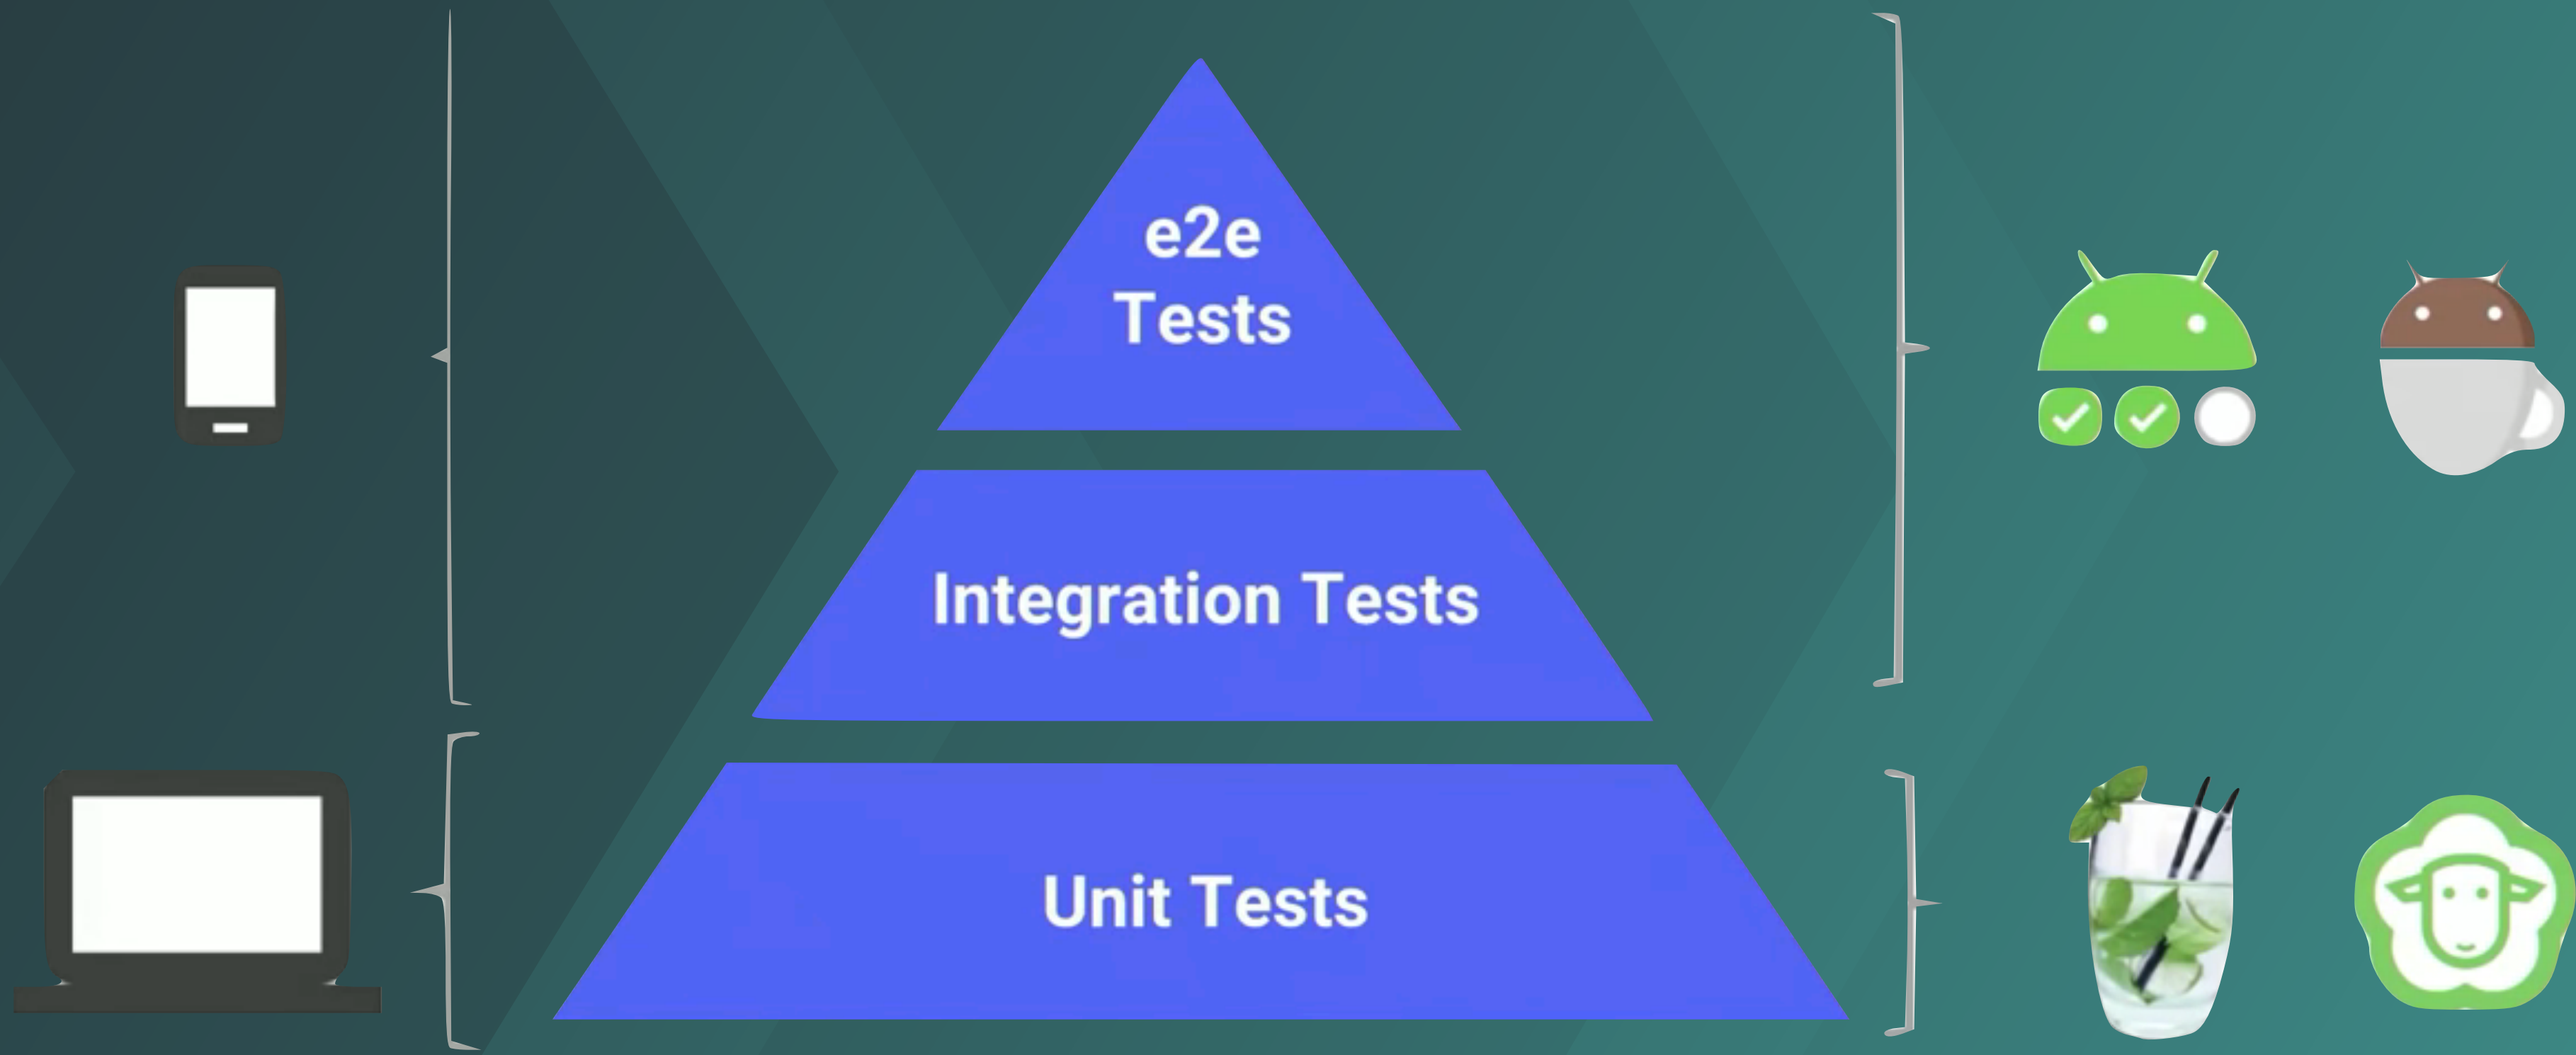

- Rapid feedback.
- Early failure detection.
- Safer code refactoring.
- Stable development velocity.

**e2e
Tests**

Integration Tests

Unit Tests

Test writing crisis

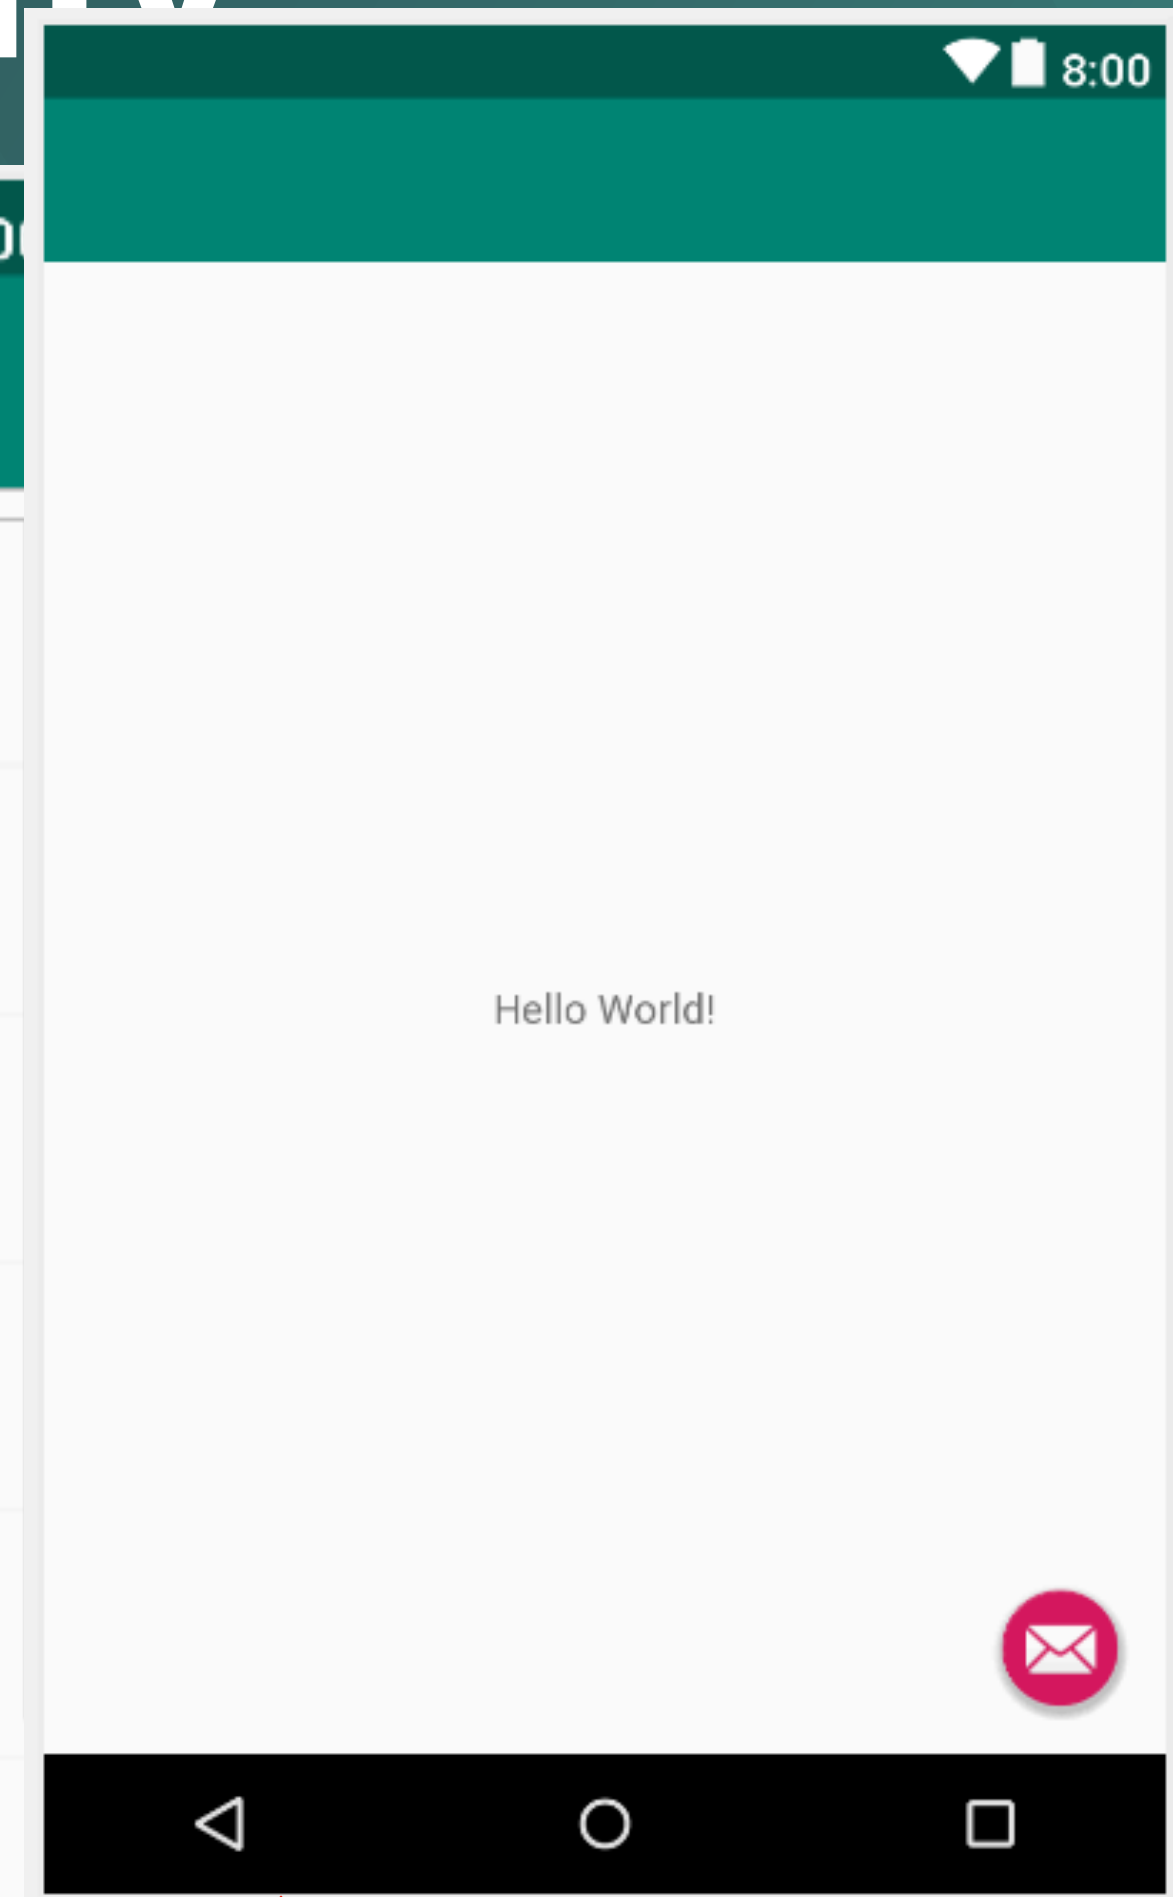

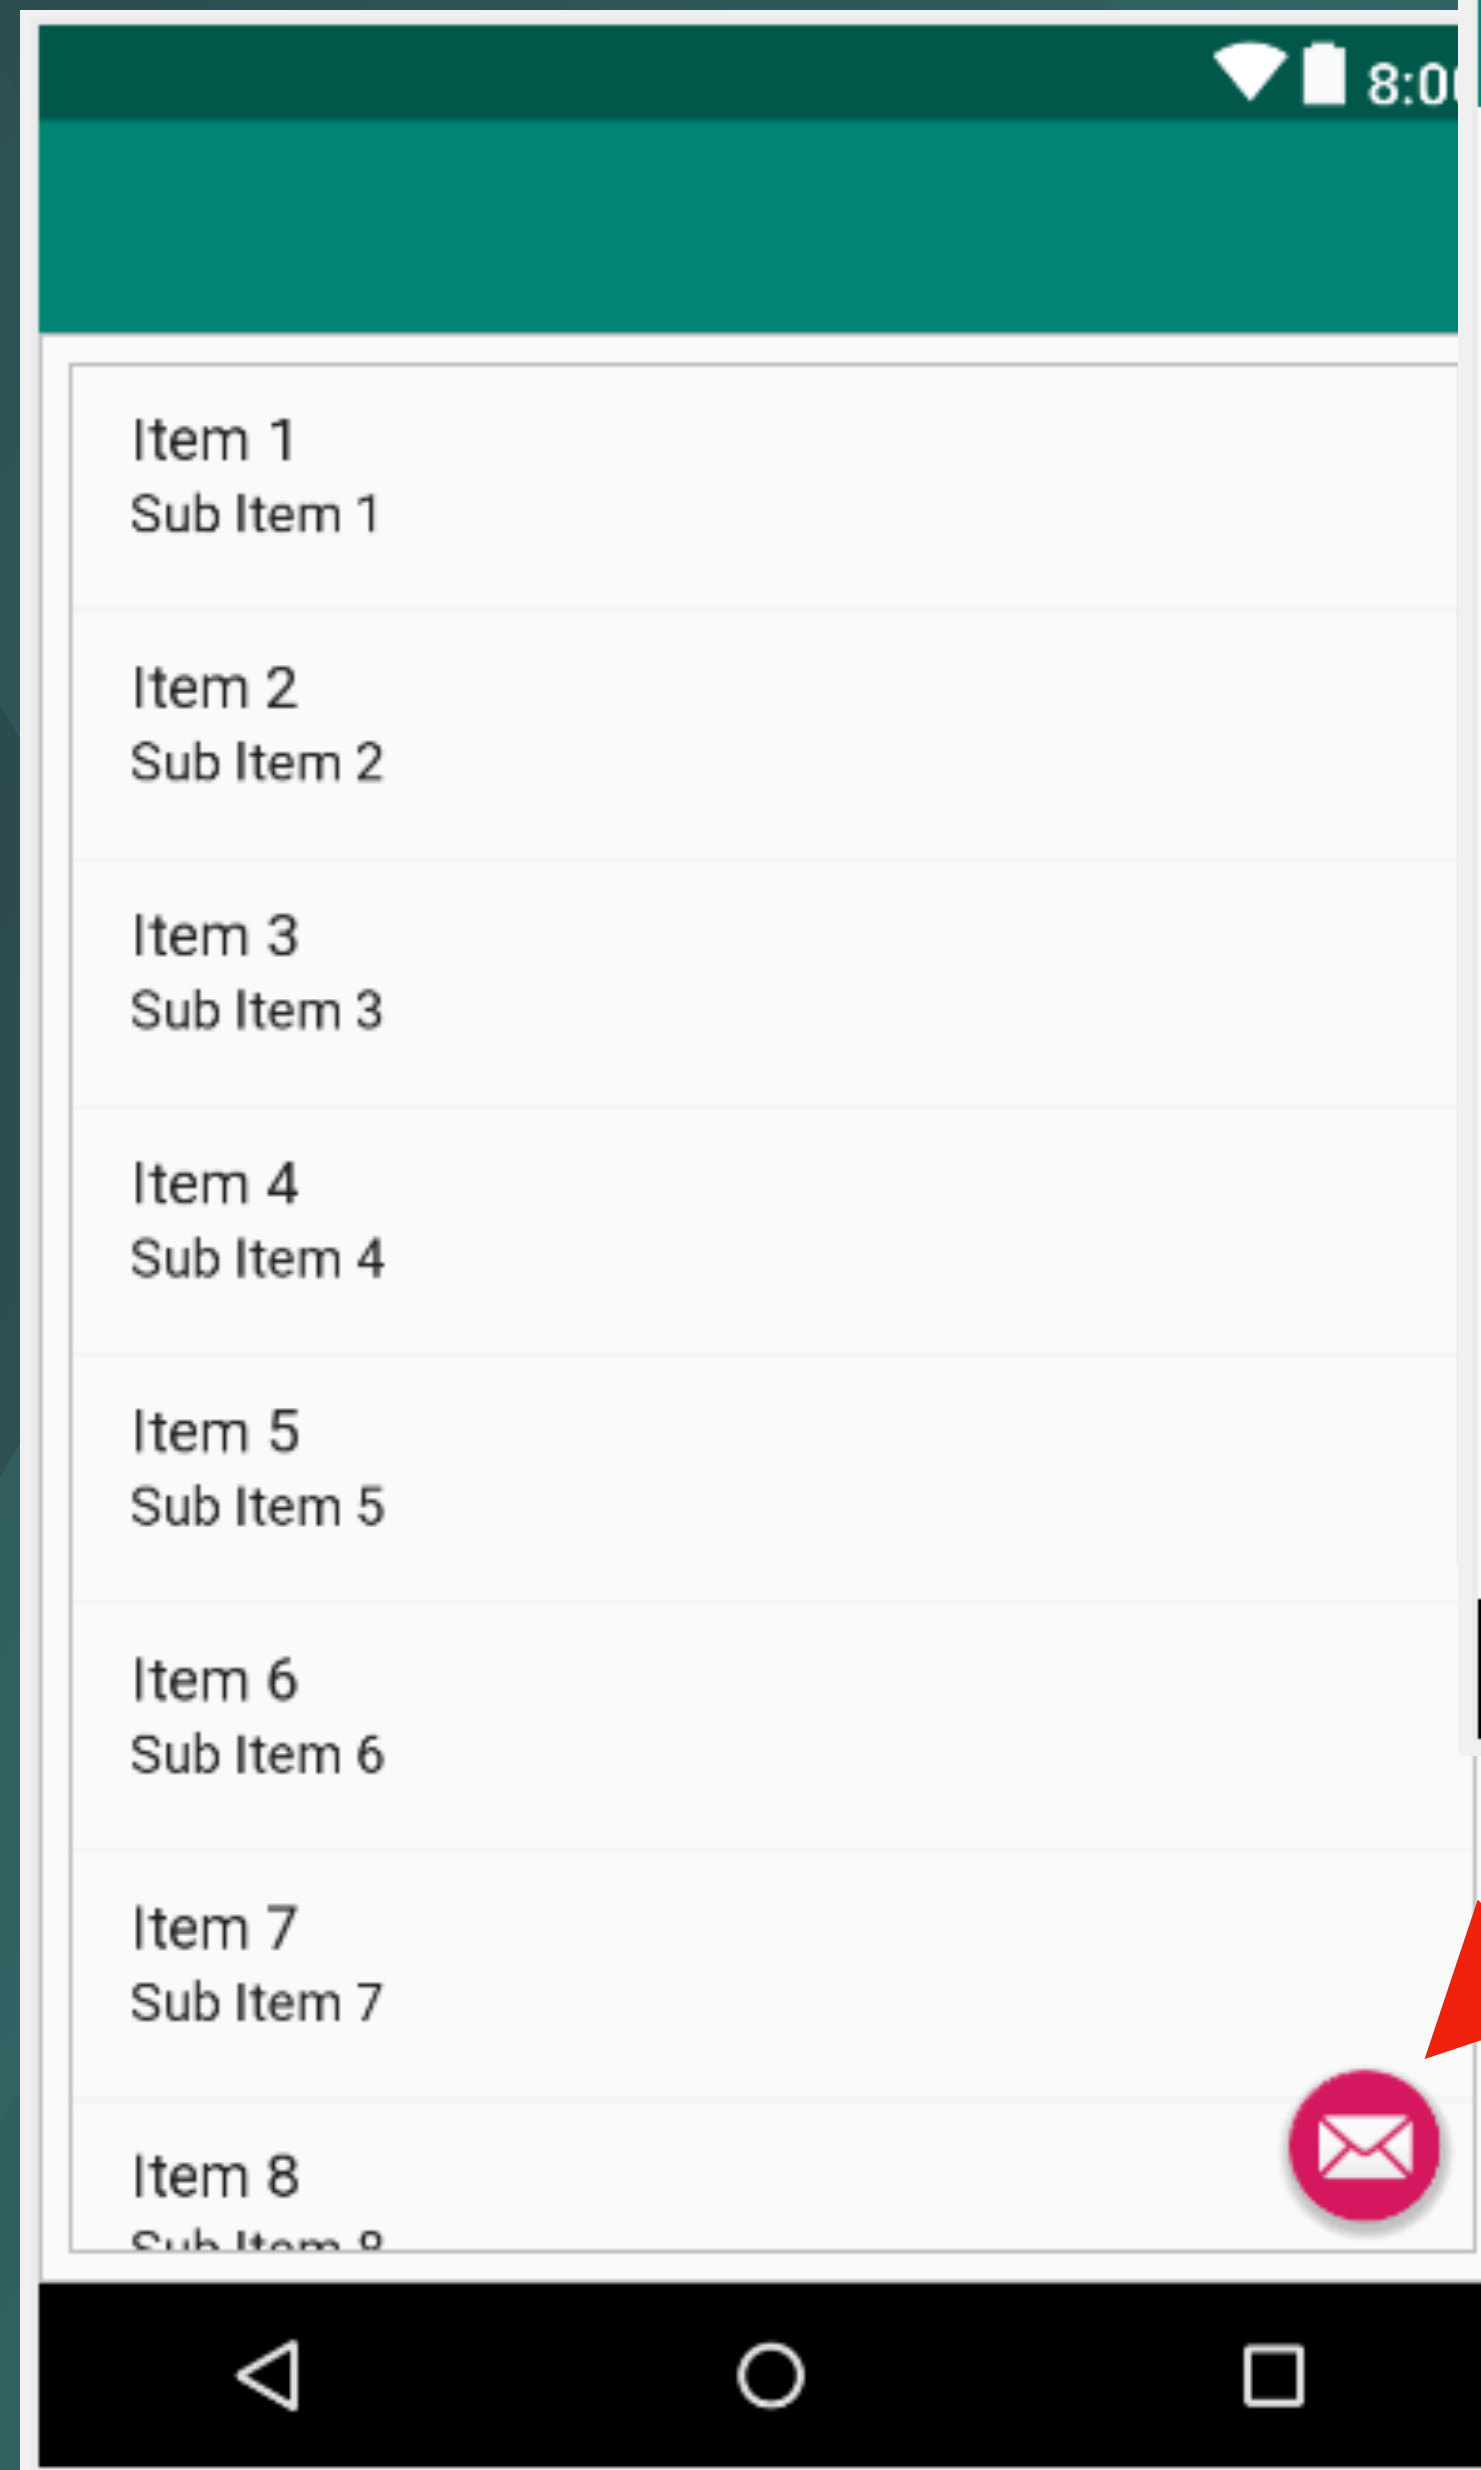

Test Structure

```
class WellStructuresTest{  
    //..  
    fun givenCondition_whenAction_thenShoulDo(){  
        // GIVEN - Setup condition  
  
        // WHEN - The tested action  
  
        // THEN - An assertion to validate the action  
    }  
    //..  
}
```

- Focus on specific behavior.
- Test behaviors independently.
- LESS is MORE. Keep tests understandable and in isolation.

NoteListActivity

Mockito

```
@RunWith(MockitoJUnitRunner::class)
class MockitoTest {
    @Spy var spyActivity = NoteListActivity()
    @Captor lateinit var intentCaptor: ArgumentCaptor<Intent>
    @Captor lateinit var clickCaptor:
        ArgumentCaptor<NoteListActivity.ClickHandler>

    fun testTitle() {
        `when` (spyActivity.findViewById(R.id.title))
            .thenReturn(mock<TextView>())

        clickCaptor.value.click()

        verify(spyActivity).startActivity(intentCaptor.capture())
    }
}
```

Robolectric

```
@RunWith(RobolectricTestRunner::class)
class RobolectricTest {
```

```
    @Test
```

```
    fun testTitle() {
```

```
        val activity =
```

```
            Roboelectric.setupActivity(NoteListActivity::class.java)
```

```
            ShadowView.clickOn(activity.findViewById(R.id.title))
```

```
            assertEquals(
```

```
                ShadowApplication.getInstance()
```

```
                    .peekNextStartedActivity().action,
```

```
                    "android.intent.action.EDIT"
```

```
            )
```

```
        }
```

```
    }
```

Espresso

```
@RunWith(AndroidJUnit4::class)
class OnDeviceTest {
```

```
    @get:Rule
    val rule = ActivityTestRule(NoteListActivity::class.java)
```

```
    @Test
```

```
    fun testTitle() {
```

```
        onView(withId(R.id.fab)).perform(click())
```

```
        intended(hasAction(equalTo("android.intent.action.EDIT")))
    }
```

```
    }
```

THIS WAY

THE OTHER WAY

THAT WAY

Android Test

Part of Jetpack

- Includes existing libraries.
- New APIs and Kotlin.
- Available on/off device.
- Open source.

Test Runner
JUnit

```
//SCAFFOLDING
```

```
@RunWith(AndroidJUnit4::class)
```

```
class SimpleUnifiedTest {
```

```
    @Before
```

```
    fun setup() {
```

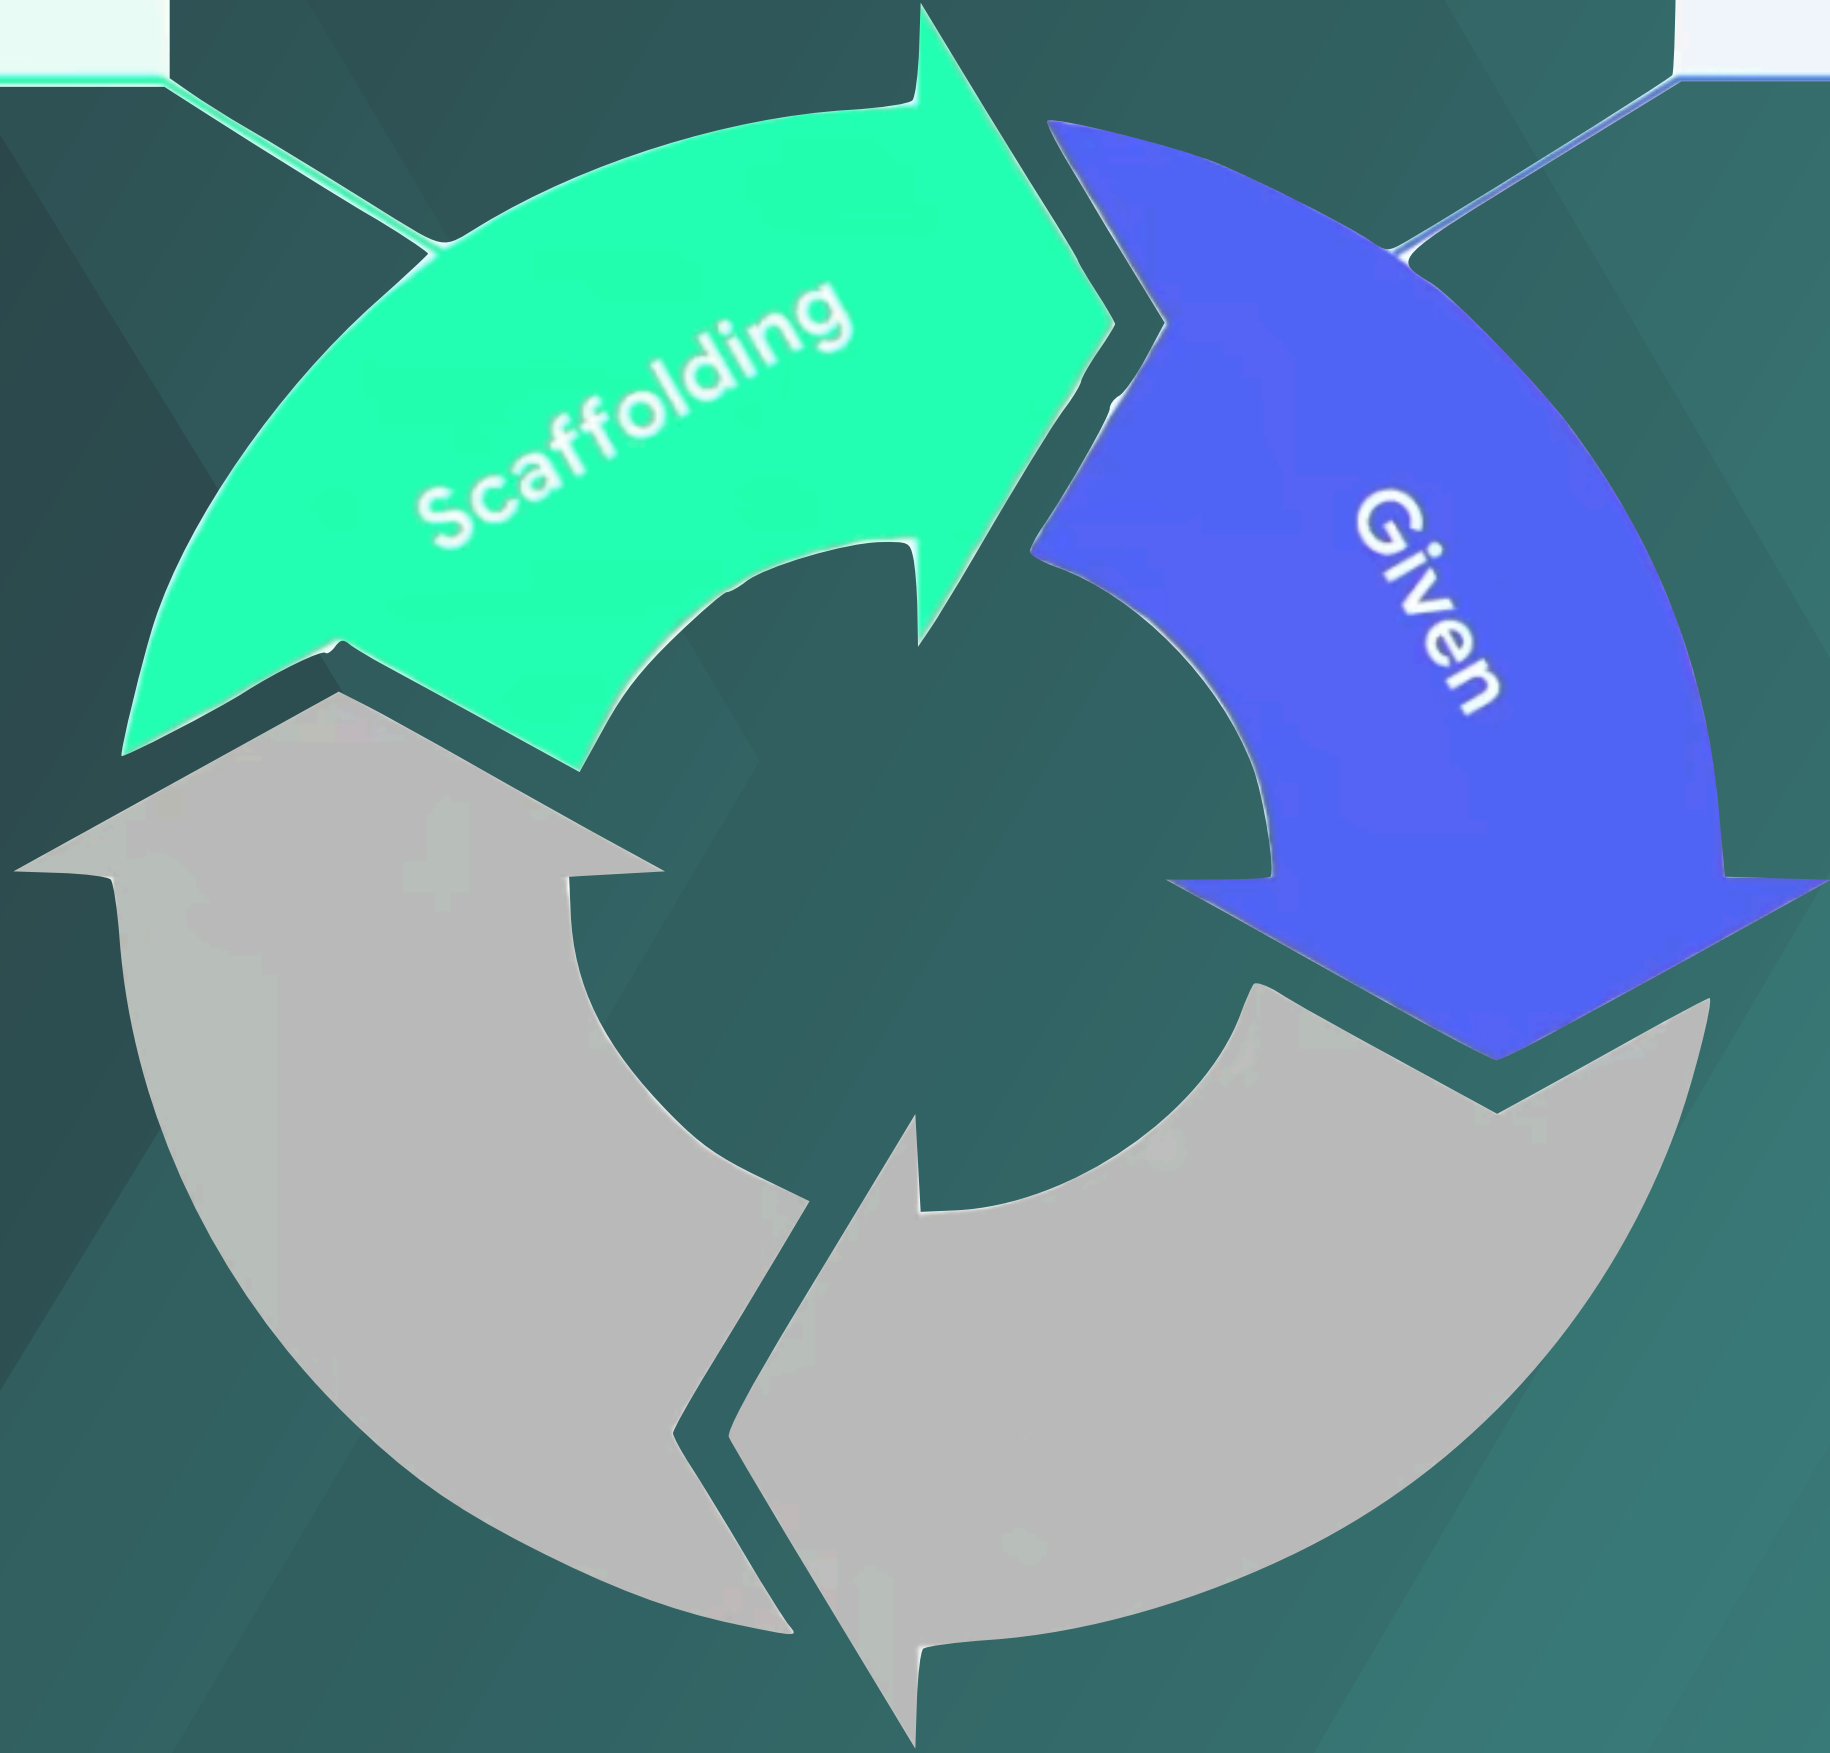

```
        val context = InstrumentationRegistry.getTargetContext()
```

```
    }
```

```
}
```

Test Runner
JUnit

Test rules

```
//GIVEN
```

```
@RunWith(AndroidJUnit4::class)
```

```
class SimpleUnifiedTest {
```

```
    @get:Rule
```

```
    val rule = ActivityTestRule(NoteListActivity::class.java)
```

```
}
```

```
//GIVEN
```

```
@RunWith(AndroidJUnit4::class)  
class SimpleUnifiedTest {  
    @Test  
    fun testMotionEvents() {  
        val motionEvent =  
            buildMotionEvent().setAction(MotionEvent.ACTION_DOWN)  
    }  
}
```

Test Runner
JUnit

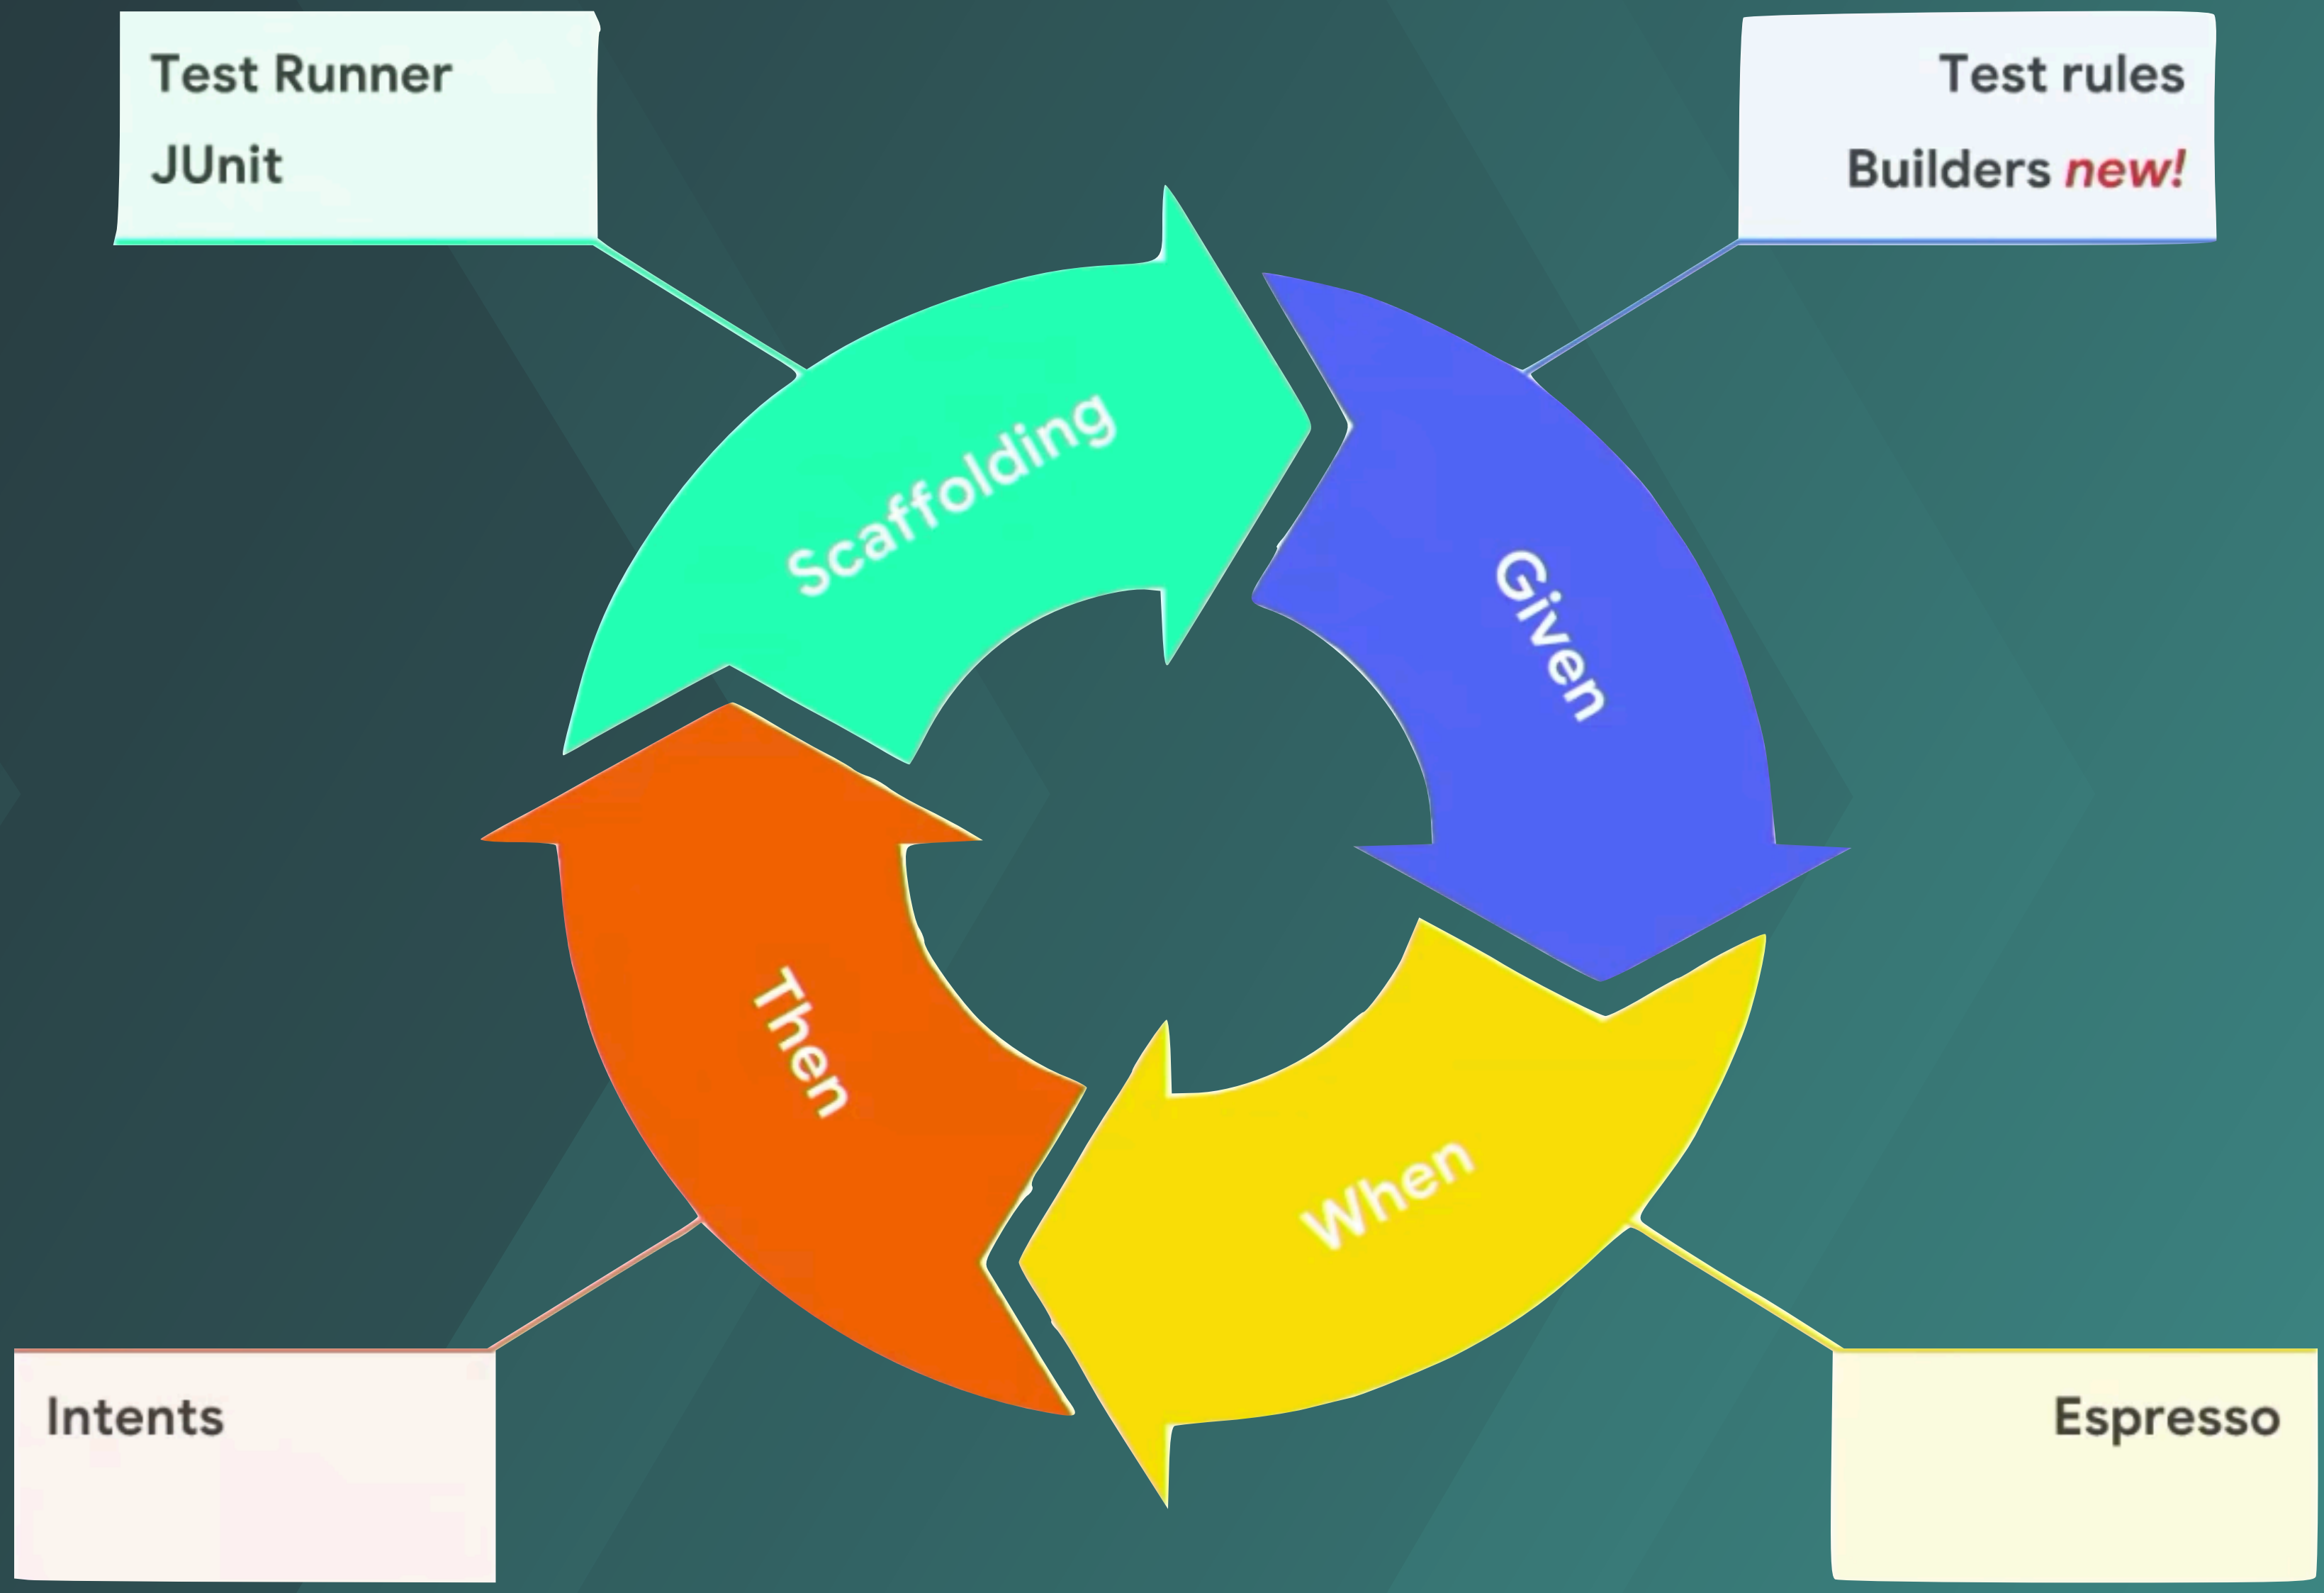

Test rules
Builders *new!*

Espresso

```
//WHEN
```

```
@RunWith(AndroidJUnit4::class)  
class SimpleUnifiedTest {  
    @Test  
    fun testButtonClickSendsIntent() {  
        onView(withId(R.id.fab)).perform(click())  
    }  
}
```

Test Runner
JUnit

Test rules
Builders *new!*

Scaffolding

Given

Then

When

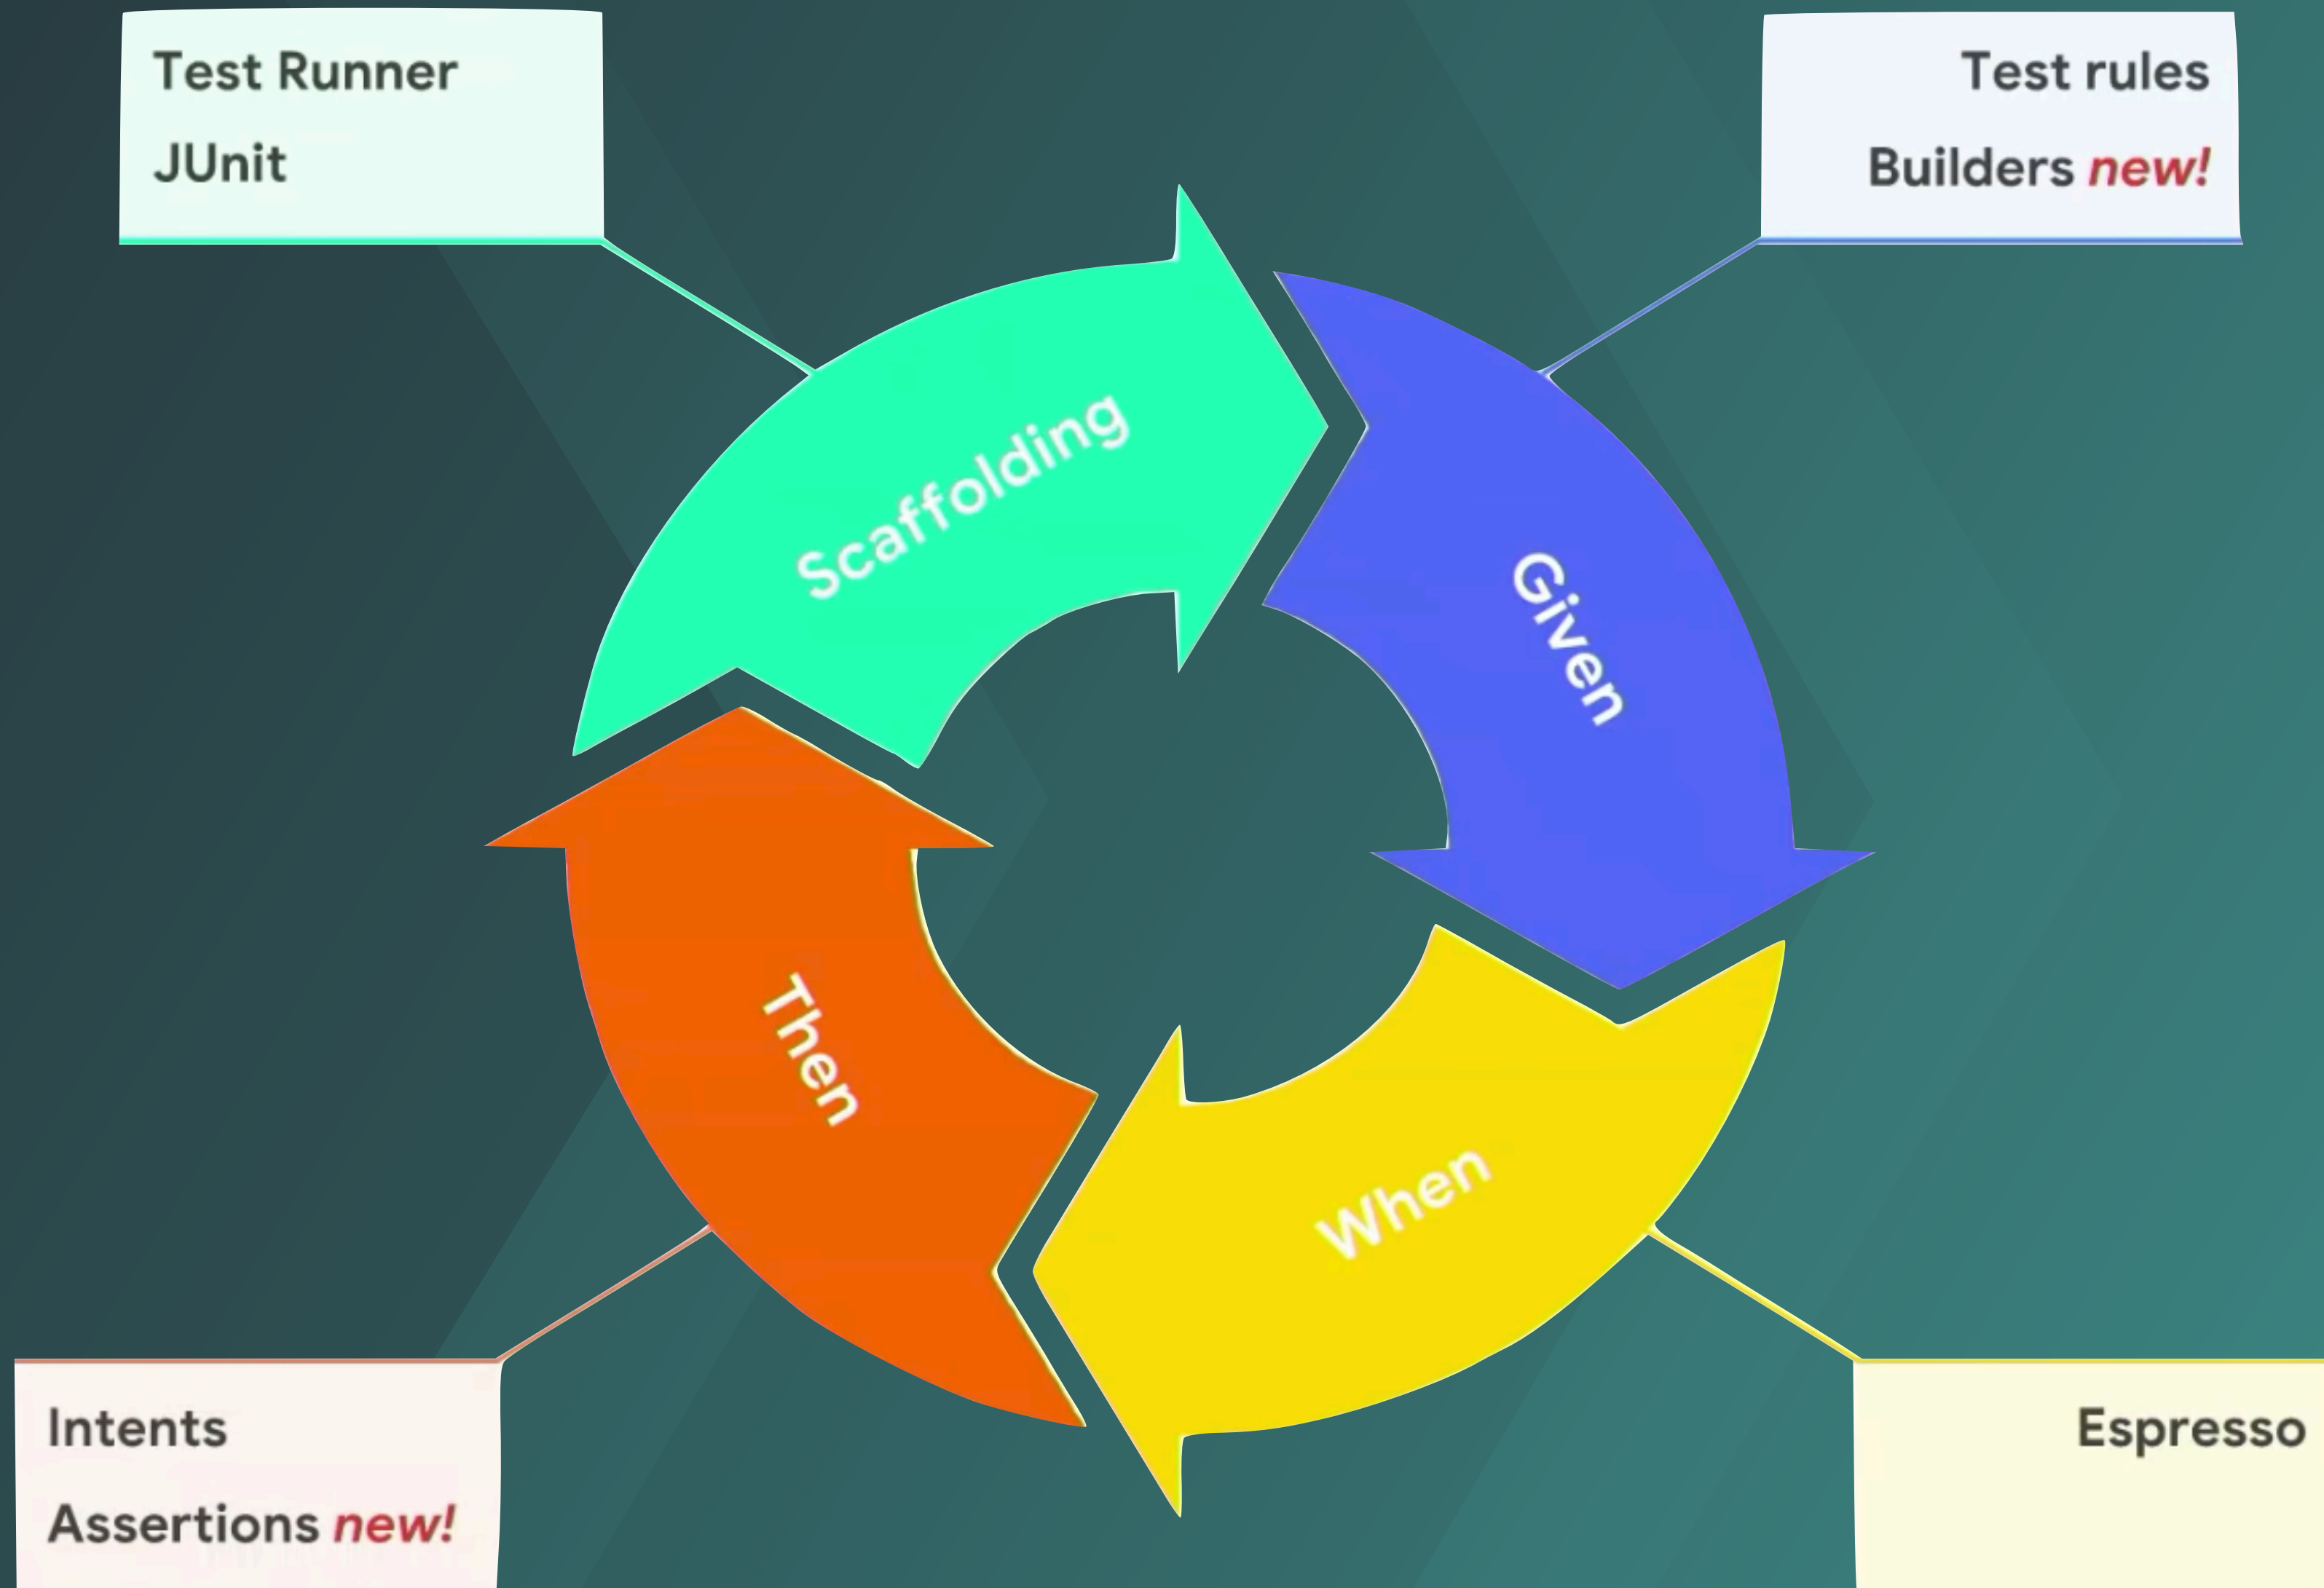

Intents

Espresso

```
//THEN
```

```
@RunWith(AndroidJUnit4::class)  
class SimpleUnifiedTest {  
    @Test  
    fun testButtonClickSendsIntent() {  
        onView(withId(R.id.fab)).perform(click())  
        intended(hasAction(equalTo("android.intent.action.EDIT")))  
    }  
}
```

```
//THEN
```

```
@RunWith(AndroidJUnit4::class)
```

```
class SimpleUnifiedTest {
```

```
    @Test
```

```
    fun testVisibleView() {
```

```
        assertEquals(view.visibility, View.VISIBLE)
```

```
    }
```

```
}
```

Failed:

Expected 0 but was 16

```
//THEN  
  
@RunWith(AndroidJUnit4::class)  
class SimpleUnifiedTest {  
    @Test  
    fun testVisibleView() {  
        assertThat(view).isVisible()  
    }  
}
```

Failed:
View was not visible

Practical Exam

- **IMPORTANT!** Obey the exam scheduler.
- Request, by email/chat, attendance reschedule in the secondary date if something **major** is not allowing you to attend the primary date.

Software Requirements

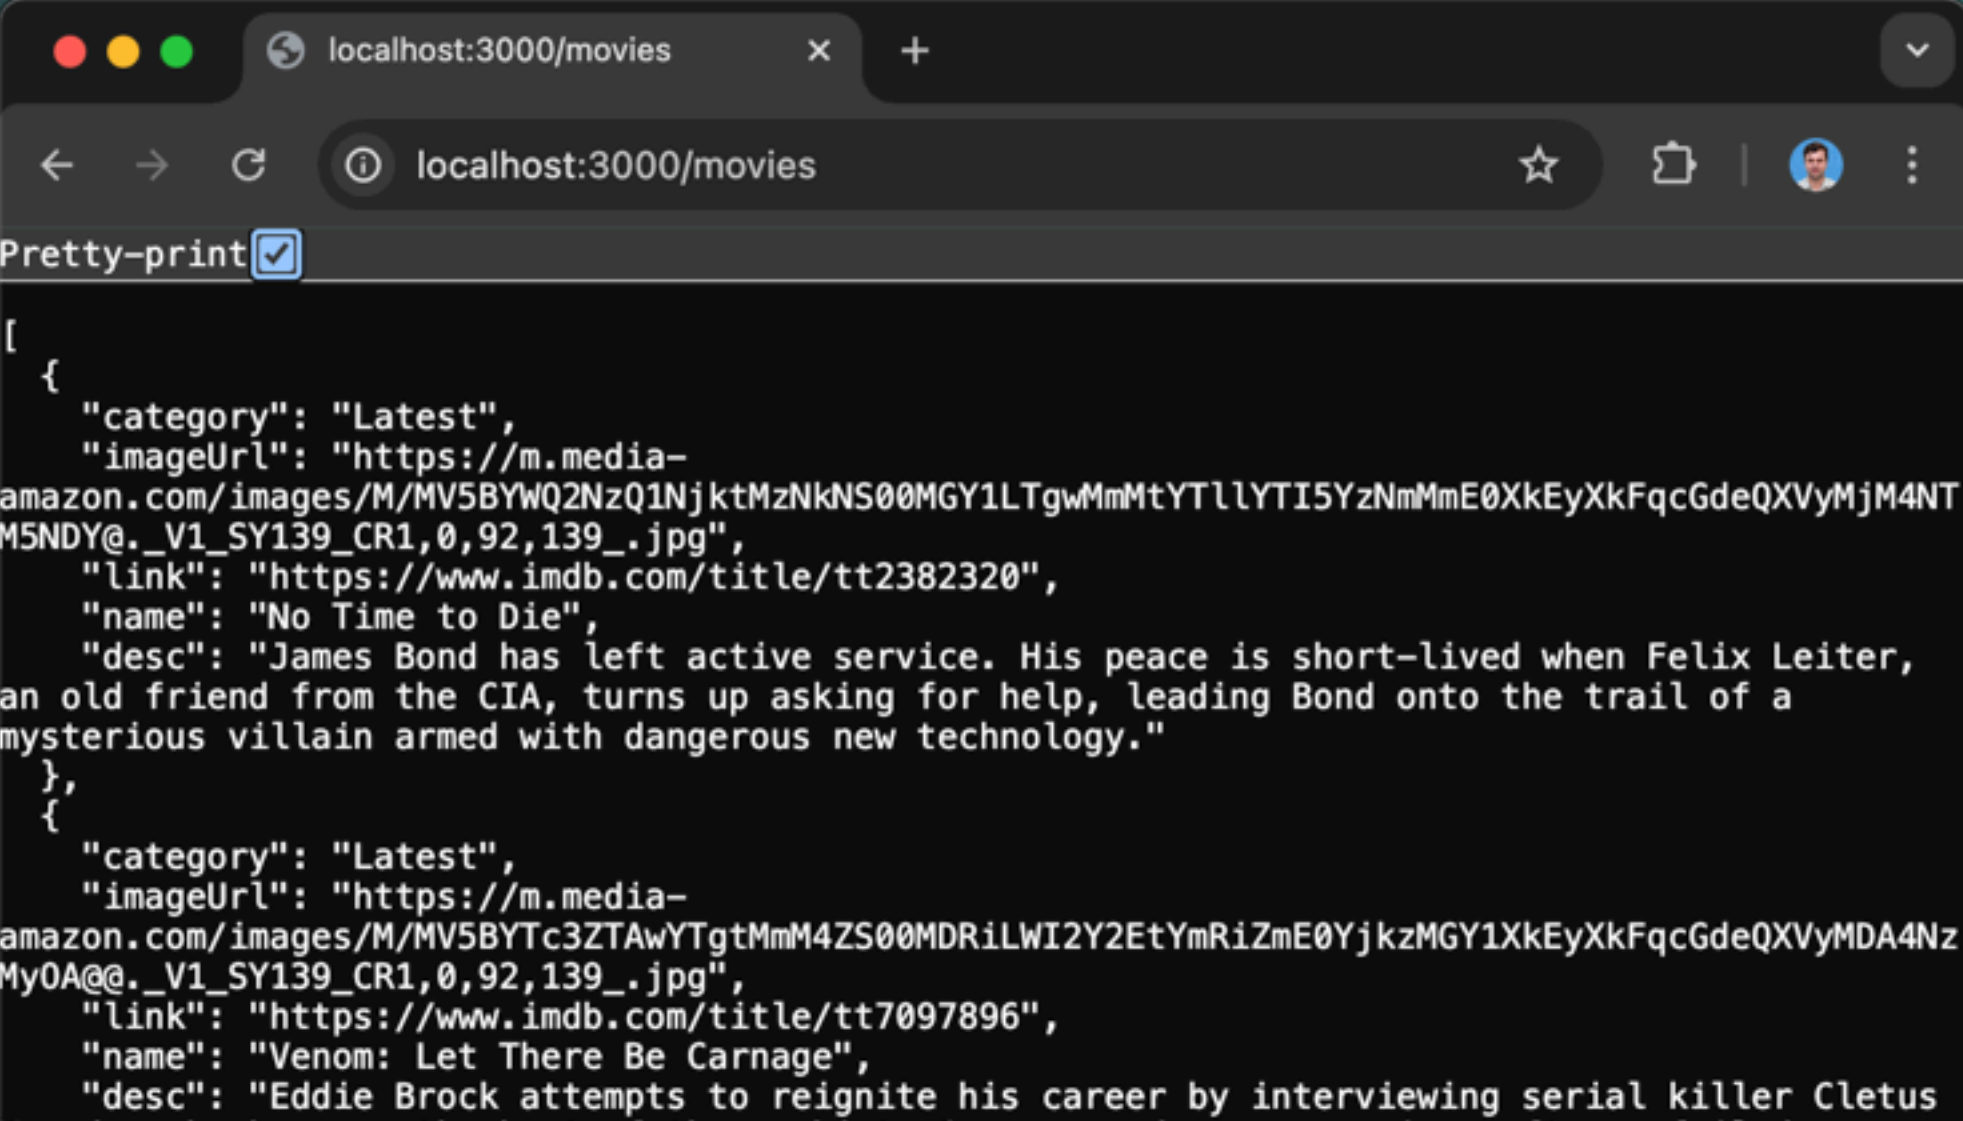

- Ensure that you have installed on your machine, the latest versions for:
 - Git
 - nodeJs
 - NPM
- ~~Are able to share your camera and desktop.~~

Execute the Server

- Ensure that you are able to execute the server from:
 - <https://github.com/dancojocar/MA/tree/master/lectures/14/server>
- Steps to execute the server:
 1. Update the dependencies: **npm install**
 2. Start the server: **npm start**
- The above two commands are executed under the **server** directory!
- **Note:** You should be running the latest version of node (v22.13.0) and npm (v10.9.2).

Verify the Server

- Using the browser of your choice go to:
 - <http://localhost:3000/movies>
- If everything is working properly you should receive a JSON similar to:

```
[
  {
    "category": "Latest",
    "imageUrl": "https://m.media-amazon.com/images/M/MV5BYWQ2NzQ1NjktMzNkNS00MGY1LTgwMmMtYTllYTl5YzNmMmE0XkEyXkFqcGdeQXVyMjM4NTM5NDY@._V1_SY139_CR1,0,92,139_.jpg",
    "link": "https://www.imdb.com/title/tt2382320",
    "name": "No Time to Die",
    "desc": "James Bond has left active service. His peace is short-lived when Felix Leiter, an old friend from the CIA, turns up asking for help, leading Bond onto the trail of a mysterious villain armed with dangerous new technology."
  },

    "name": "Venom: Let There Be Carnage",
    "desc": "Eddie Brock attempts to reignite his career by interviewing serial killer Cletus"
  }
]
```

Practical Exam

- Two hours to solve the requirements.
- In this time:
 - You are **NOT** allowed to:
 - Discuss with anyone!
 - Disturb others!
 - You are allowed to:
 - Use all the materials available on your local machine or on the Internet. So, ensure that you are well prepared!
 - Request clarifications only from the exam supervisor.
- If found breaking at least one of the above rules you will be denied to take the current exam and the following ones held this year!

Lecture outcomes

- Introduction to the concepts and tools for building Android tests.
- Build complex unit tests with Android dependencies that cannot be satisfied with mock objects.
- Create tests to verify that the user interface behaves correctly for user interactions within a single app or for interactions across multiple apps.
- Create a stable and reusable testing harness to run performance tests.
