1. Information regarding the programme

1.1 Higher education	Babes-Bolyai University
institution	
1.2 Faculty	Mathematics and Computer Science
1.3 Department	Computer Science
1.4 Field of study	Computer Science
1.5 Study cycle	Bachelor
1.6 Study programme /	Computer Science, Information Engineering
Qualification	

2. Information regarding the discipline

2.1 Name of the	e dis	scipline	Kr	owledge Processi	ng		
2.2 Course coor	2.2 Course coordinator Lect. Christian Sacarea, PhD						
2.3 Seminar coo	ordi	nator		Lect. Christian Sad	carea	, PhD	
2.4. Year of	3	2.5	6	2.6. Type of	Ε	2.7 Type of	Optional
study		Semester		evaluation		discipline	

3. Total estimated time (hours/semester of didactic activities)

3.1 Hours per week	3	Of which: 3.2 course	2	3.3	1 lab
				seminar/laboratory	
3.4 Total hours in the curriculum	42	Of which: 3.5 course	28	3.6	14
				seminar/laboratory	
Time allotment:					hours
Learning using manual, course support, bibliography, course notes					20
Additional documentation (in libraries, on electronic platforms, field documentation)					20
Preparation for seminars/labs, homework, papers, portfolios and essays					50
Tutorship					10
Evaluations					8
Other activities:					-
3.7 Total individual study hours		108			•
3.8 Total hours per semester		150			

4. Prerequisites (if necessary)

3.9 Number of ECTS credits

4.1. curriculum	•
4.2. competencies	Programming skills

6

5. Conditions (if necessary)

5.1. for the course	•
5.2. for the seminar /lab	Laboratory with computers
activities	

6. Specific competencies acquired

_	or opeen	te competencies acquired
		C3.1 Description of concepts, theories and models in Knowledge Processing
	Professional competencies	C3.3 Use of models for the formalization of human reasoning.
	ofess npet	C3.4 Data analysis and logical models for solving different tasks of Knowledge Processing
	Pre	C3.5 Development of interdisciplinary projects.
		CT1. Application of organized and efficient working rules, of responsible attitudes
		concerning scientific teaching, for creative exploitation of their own potential with respect
	ies	to the principles and rules of professional ethics.
	Transversal competencies	CT2. Efficient conduct of activities organized in an inter-disciplinary group and the empathic capacity development of inter-personal communication and collaboration with diverse groups.
	Transversa	CT3.Use of effective methods and techniques of learning, information, research and capacity development to exploit knowledge, to adapt to a dynamic society and to communicate in Romanian language and in a foreign language.

7. Objectives of the discipline (outcome of the acquired competencies)

7.1 General objective of the discipline	 This course aims to give students a basic understanding about the fundamental principles, concepts and challenges underlying knowledge processing and management. At the end of this course, students will have a thorough theoretical understanding of these issues, and the ability to relate and apply knowledge processing and management theories in the light of simple examples.
7.2 Specific objective of the discipline	 Selected case studies are used to illustrate the utility of knowledge processing and management theories in specific situations, but also to highlight current gaps between knowledge processing and management theory and practice.

8. Content

8.1 Course	Teaching methods	Remarks
 Overview and Motivation (Week 1): Basic motivation and introduction to this course. 	Lectures, presentations, conversations	
 Knowledge Types. Can Knowledge Be Processed? (Week 2): What is knowledge? What forms of knowledge can we identify? We will discuss some basic distinctions and characterizations. 	Lectures, presentations, conversations	
3. From Knowledge Processing to Knowledge Management. (Week 3): What is Knowledge Processing. How can knowledge be processed? We will discuss a series of knowledge management perspectives and their implications.	Lectures, presentations, conversations	
4. Knowledge Organization (Week 4): How can knowledge be organized? We will discuss some basic principles of knowledge organization, such as	Lectures, presentations, conversations	

	categorization, taxonomies and concept systems.	
5.	Knowledge Bases (Week 5): What kinds of broad	Lectures, presentations,
	knowledge bases exist? We will discuss different	conversations
	forms of knowledge bases and representations,	
	such as metadata, wordnet, framenet, cyc,	
	openmind and others.	
6.	Formal Concept Analysis (Week 6): An	Lectures, presentations,
	introduction to the basic model of FCA. We discuss	conversations
	the main representation of a data set as a formal	
	concept and the knowledge clustering called	
	concept hierarchy and its importance to	
	knowledge processing.	
7		
/.	Formal Concept Analysis (Week 7): Many valued	Lectures, presentations,
	contexts, conceptual scaling, logical scaling.	conversations
	Examples.	
8.	Formal Concept Analysis (Week 8): The	Lectures, presentations,
	conceptual hierarchy as a knowledge map.	conversations
9.	Knowledge Acquisition (Week 9): How can	Lectures, presentations,
	knowledge be acquired in a way that is amenable	conversations
	to computation and/or analysis? We also discuss	
	implications in data sets and algorithm to	
	determine the stem base.	
10.	Knowledge Transfer (Week 10): How can	Lectures, presentations,
	knowledge transfer be characterized and what	conversations
	factors can influence knowledge transfer?	
11.	Knowledge Repositories (Week 11): How can	Lectures, presentations,
	knowledge repositories be designed and	conversations
	deployed? We will discuss concepts such as	
	knowledge reuse, discretionary databases,	
	experience factories and selected concepts from	
	case based reasoning.	
12	Bussiness Oriented Knowledge Management	Lectures, presentations,
	(Week 12): In this class, we will discuss different	conversations
	approaches aimed at integrating knowledge	
	management into an organization's business	
	processes.	
13	Knowledge Based Analysis (Week 13-14): How	Lectures, presentations,
13.	can socio-technological systems be organized from	conversations
	a knowledge perspective? We will discuss an	
	agent-oriented modeling approach for analyzing	
	knowledge transfer instruments.	
1.4		
14.	Knowledge Based Analysis (Week 13-14): How	Lectures, presentations,
	can socio-technological systems be organized from	conversations
	a knowledge perspective? We will discuss an	
	agent-oriented modeling approach for analyzing	
D	knowledge transfer instruments.

9. Corroborating the content of the discipline with the expectations of the epistemic community, professional associations and representative employers within the field of the program

Knowledge processing is an interdisciplinary area which is broadly needed by all actors from science, economy, industry or research.
