1. Information regarding the programme

| 1.1 Higher education | Babeş Bolyai University |
|-----------------------|---|
| institution | |
| 1.2 Faculty | Faculty of Mathematics and Computer Science |
| 1.3 Department | Department of Computer Science |
| 1.4 Field of study | Computer Science |
| 1.5 Study cycle | Bachelor |
| 1.6 Study programme / | Computer Science |
| Qualification | |

2. Information regarding the discipline

| 2.1 Name of the discipline Numerical Calculus | | | | | | | |
|---|---|----------|---|--------------|---|-------------|------------|
| 2.2 Course coordinator Lecturer Ph.D. Teodora Catinas | | | | | | | |
| 2.3 Seminar coordinatorLecturer Ph.D. Teodora Catinas | | | | | | | |
| 2.4. Year of | 3 | 2.5 | 6 | 2.6. Type of | Ε | 2.7 Type of | Compulsory |
| study | | Semester | | evaluation | | discipline | |

3. Total estimated time (hours/semester of didactic activities)

| 3.1 Hours per week | 4 | Of which: 3.2 course | 2 | 3.3 | 2 lab |
|---|----|----------------------|----|--------------------|-------|
| | | | | seminar/laboratory | |
| 3.4 Total hours in the curriculum | 48 | Of which: 3.5 course | 24 | 3.6 | 24 |
| | | | | seminar/laboratory | |
| Time allotment: | | | | | |
| Learning using manual, course support, bibliography, course notes | | | | | |
| Additional documentation (in libraries, on electronic platforms, field documentation) | | | | | |
| Preparation for seminars/labs, homework, papers, portfolios and essays | | | | | 20 |
| Tutorship | | | | | 7 |
| Evaluations | | | | | 20 |
| Other activities: | | | | | - |
| 3.7 Total individual study hours77 | | | | | |

| | •• |
|------------------------------|-----|
| 3.8 Total hours per semester | 125 |
| 3.9 Number of ECTS credits | 5 |

4. Prerequisites (if necessary)

| 4.1. curriculum | • |
|-------------------|---|
| 4.2. competencies | • Knowledge of main notions and procedures of numerical analysis and the ability to work with them. Programming skills in MATLAB for implementing numerical algorithms. |

5. Conditions (if necessary)

| 5.1. for the course | • |
|--------------------------------------|------------------------------|
| 5.2. for the seminar /lab activities | • Laboratory with computers. |

6. Specific competencies acquired

| Professional competencies | Cl.1 Description of specific programming paradigms and language mechanisms, as well as the identification of the differences between the semantic and syntactic aspects. C3.3 Utilization of informatical and mathematical models and instruments for solving specific problems from the aplicability domain. |
|------------------------------------|--|
| Transversal competencies | • CT3. Utilization of some efficient methods and techniques of learning, information, research and development of capacities of exploitation of knowledge, of adaptation to the requirements of a dynamical society and communication in Romanian and English. |

7. Objectives of the discipline (outcome of the acquired competencies)

| 7.1 General objective of the discipline | Be able to understand and use basic concepts of Numerical Analysis Be able to implement numerical algorithms in order to solve practical problems. |
|--|---|
| 7.2 Specific objective of the discipline | Acquire theoretical and practical knowledge about the basic numerical algorithms regarding approximation of functions, numerical integration of functions, numerical solving of linear/nonlinear systems of equations and differential equations. Ability to apply numerical algorithms to solve practical and real life problems. |

8. Content

| 8.1 Course | Teaching methods | Remarks | | | | |
|---|------------------------|---------|--|--|--|--|
| 1. Introductive notions. Finite and divided | Exposure: description, | | | | | |
| differences (definitions and properties). | explanation, examples. | | | | | |
| 2. Lagrange interpolation: interpolation | Exposure: description, | | | | | |
| polynomial, interpolation formula, study of the | explanation, examples, | | | | | |
| error. | proofs. | | | | | |
| 3. Lagrange interpolation: Aitken's algorithm and | Exposure: description, | | | | | |
| Newton's formula. | explanation, examples. | | | | | |
| 4. Hermite interpolation: interpolation | Exposure: description, | | | | | |
| polynomial, interpolation formula, study of the | explanation, examples, | | | | | |
| error. Hermite interpolation with double nodes. | proofs. | | | | | |
| 5. Birkhoff interpolation: interpolation | Exposure: description, | | | | | |
| polynomial, interpolation formula, study of the | explanation, examples, | | | | | |
| error. Least square approximation. | proofs. | | | | | |
| 6. Numerical differentiation and integration | Exposure: description, | | | | | |
| (introductive notions). Newton-Cotes | explanation, examples, | | | | | |
| quadrature formulas. Repeated quadrature | proofs, dialogue. | | | | | |
| formulas. | | | | | | |
| 7. General quadrature formulas. Romberg's | Exposure: description, | | | | | |
| algorithm. Adaptive quadratures formulas. | explanation, examples. | | | | | |
| Gauss type quadrature formulas (definition, | | | | | | |
| rectangle formula, Romberg's algorithm). | | | | | | |
| 8. Numerical methods for solving linear systems - | Exposure: description, | | | | | |
| direct methods (Gauss, Gauss-Jordan, LU- | explanation, examples. | | | | | |

| methods). Perturbations of a linear system. | | | | | | | |
|---|--|-------------------------------------|--|--|--|--|--|
| 9. Numerical methods for solving linear systems - | Exposure: description, | | | | | | |
| iterative methods (Jacobi, Gauss-Seidel, SOR). | explanation, examples. | | | | | | |
| 10. Methods for solving nonlinear equations in R: | Exposure: description, | | | | | | |
| one-step methods (Newton (tangent) method) | explanation, examples. | | | | | | |
| and multi-step methods (secant, bisection and | | | | | | | |
| false position methods). | | | | | | | |
| 11. Methods for solving nonlinear equations in R: | Exposure: description, | | | | | | |
| Lagrange, Hermite and Birkhoff inverse | explanation, examples, | | | | | | |
| interpolation. Methods for solving nonlinear | proofs. | | | | | | |
| systems: successive approximation and | Process. | | | | | | |
| Newton methods. | | | | | | | |
| 12. Numerical methods for solving differential | Exposure: description, | | | | | | |
| equations: Taylor interpolation, Euler and | explanation, examples. | | | | | | |
| | explanation, examples. | | | | | | |
| Runge-Kutta methods. | | | | | | | |

9. Corroborating the content of the discipline with the expectations of the epistemic community, professional associations and representative employers within the field of the program

- The course exists in the studying program of all major universities in Romania and abroad;
- The content of the course is important for seeing the application of mathematical knowledge in solving practical and real life problems.

10. Evaluation

| Type of activity | 10.1 Evaluation criteria | 10.2 Evaluation methods | 10.3 Share in the grade (%) | | | |
|--|--|---|-----------------------------|--|--|--|
| 10.4 Course | know the basic principles of Numerical Analysis; apply the course concepts problem solving | Written exam | 70% | | | |
| 10.5 Seminar/lab activities | be able to implement course concepts and algorithms apply techniques for different practical problems | Evaluation and continuous observations during the semester. | 30% | | | |
| 10.6 Minimum performance standards | | | | | | |
| At least grade 5 (from a scale of 1 to 10) at both written exam and laboratory work. | | | | | | |
