SYLLABUS

1. Information regarding the programme

1.1 Higher education institution	Babeş Bolyai University
1.2 Faculty	Faculty of Mathematics and Computer Science
1.3 Department	Department of Mathematics
1.4 Field of study	Computer Science
1.5 Study cycle	Master
1.6 Study programme / Qualification	Software Engineering

2. Information regarding the discipline

	-	-					
2.1 Name of the dis	Ethe disciplineMathematical foundations of decision-making process						
2.2 Course coordinator		Assoc. Prof. Nicolae Popovici, Ph.D.					
2.3 Seminar coordi	nato	r	As	soc. Prof. Nicolae	Popovici, P	h.D.	
2.4. Year of study	1	2.5 Semester		2.6. Type of evaluation	Exam	2.7 Type of discipline	Compulsory

3. Total estimated time (hours/semester of didactic activities)

3.1 Hours per week	3	Of which: 3.2 course	2	3.3 seminar	1
3.4 Total hours in the curriculum	42	Of which: 3.5 course	28	3.6 seminar	14
Time allotment:					hours
Learning using manual, course support, bibliography, course notes					
Additional documentation (in libraries, on electronic platforms, field documentation)					
Preparation for seminars/labs, homework, papers, portfolios and essays					
Tutorship					
Evaluations					
Other activities:					-
3.7 Total individual study hours		133			1
3.8 Total hours per semester		175			

4. Prerequisites (if necessary)

3.9 Number of ECTS credits

4.1. curriculum	Algebra
	• Geometry
	Mathematical Analysis
4.2. competencies	Basic notions of linear algebra, analytical geometry and differential
	calculus in the n-dimensional Euclidean space

7

5. Conditions (if necessary)

5.1. for the course	•
5.2. for the seminar /lab	•
activities	

6. Specific competencies acquired

Professional competencies	optimization theory.	vanced concepts and results in the field of plementable algorithms for solving optimization
Transversal competencies	• Ability to model and analyze from a mather processes from other sciences, economics and	natical point of view practical decision-making engineering.

7. Objectives of the discipline (outcome of the acquired competencies)

7.1 General objective of the	The study of fundamental mathematical concepts and practical methods		
discipline	relevant to the study of decision-making processes as optimization problems.		
7.2 Specific objective of the	Students should acquire knowledge about:		
discipline	• Partially ordered spaces;		
	• Preference relations induced by utility functions; optimality concepts;		
	decisional processes as scalar or vector optimization problems;		
	• Elements of convex analysis;		
	• Linear optimization; the Simplex algorithm in primal and dual form;		
	• Matrix games and their solution by means of linear programming;		
	• The cutting planes algorithm for nonlinear constrained optimization.		

8. Content

8.1 Course	Teaching methods	Remarks
1. Preference relations induced by utility	Direct instruction,	
functions; decisional processes modeled as	mathematical proof,	
scalar or vector (multicriteria) optimization	exemplification	
problems		
2. Optimality concepts: ideal efficiency, Pareto	Direct instruction,	
efficiency, weak efficiency, proper efficiency.	mathematical proof,	
	exemplification	
3. Level sets and their role in the study of optimal	Direct instruction,	
solutions; the existence and the unicity of	mathematical proof,	
optimal solutions	exemplification	
4. Convex sets and cones; the characterization of	Direct instruction,	
convex cones and their relationship with linear	mathematical proof,	
order relations	exemplification	
5. Convex functions; characterizations; local	Direct instruction,	
versus global minimal points; properties of the	mathematical proof,	
level sets	exemplification	
6. Mathematical foundations of linear	Direct instruction,	
programming; duality theorems.	mathematical proof,	
	exemplification	
7. The Simplex algorithm in primal form	Direct instruction,	
	mathematical proof,	
	exemplification	
8. The Simplex algorithm in dual form	Direct instruction,	

	mathematical proof,	
	exemplification	
9. Methods for solving the dual problem via the	Direct instruction,	
primal problem	mathematical proof,	
	exemplification	
10. Solution of some extended optimization	Direct instruction,	
problems obtained by adding a new constraint	mathematical proof,	
	exemplification	
11. Mathematical foundations of game theory.	Direct instruction,	
Two-player zero-sum matrix games.	mathematical proof,	
	exemplification	
12. Characterizations of optimal strategies.	Direct instruction,	
Geometrical solution of certain matrix games.	mathematical proof,	
	exemplification	
13. Numerical solution of matrix games by means	Direct instruction,	
of linear optimization problems	mathematical proof,	
	exemplification	
14. Optimization problems involving a linear	Direct instruction,	
objective function and nonlinear constraints;	mathematical proof,	
the cutting hyperplanes algorithm	exemplification
