

SYLLABUS

1. Information regarding the programme

1.1 Higher education institution	Babeş Bolyai University
1.2 Faculty	Faculty of Mathematics and Computer Science
1.3 Department	Department Mathematics
1.4 Field of study	Mathematics
1.5 Study cycle	Bachelor
1.6 Study programme / Qualification	Computer Science

2. Information regarding the discipline

2.1 Name of the discipline	Geometry						
2.2 Course coordinator	Assoc.Prof.PhD. Cornel Pintea						
2.3 Seminar coordinator	Assoc.Prof.PhD. Cornel Pintea						
2.4. Year of study	1	2.5 Semester	2	2.6. Type of evaluation	VP	2.7 Type of discipline	Compulsory

3. Total estimated time (hours/semester of didactic activities)

3.1 Hours per week	4	Of which:	2	3.3 seminar	2 sem
3.4 Total hours in the curriculum	5	Of which:	2	3.6 seminar	28
	2	3.5 course	4		
Time allotment:	hours				
Learning using manual, course support, bibliography, course notes	20				
Additional documentation (in libraries, on electronic platforms, field documentation)	10				
Preparation for seminars/labs, homework, papers, portfolios and essays	15				
Tutorship	15				
Evaluations	13				
Other activities:	-				
3.7 Total individual study hours	73				
3.8 Total hours per semester	125				
3.9 Number of ECTS credits	5				

4. Prerequisites (if necessary)

4.1. curriculum	<ul style="list-style-type: none"> Elementary abstract algebra
4.2. competencies	<ul style="list-style-type: none"> Competencies of logic reasonings and in using the knowledges of the above mentioned curricula.

5. Conditions (if necessary)

5.1. for the course	<ul style="list-style-type: none"> The classroom should be gifted with a board and video projector. The attendance is strongly recommended.
5.2. for the seminar /lab activities	<ul style="list-style-type: none"> The classroom should be gifted with a board and . The attendance is strongly recommended.

6. Specific competencies acquired

Professional competencies	<ul style="list-style-type: none"> ● Knowledge, understanding and use of basic objects and concepts of analytic geometry. ● Ability for elementary algebraic calculations to be used for vector algebra. ● Ability to work independently and/or in a team in order to solve problems in defined professional contexts.
Transversal competencies	<ul style="list-style-type: none"> ● Ability to distinguish the objects of analytic geometry in other contexts, such as other courses and real life problems. ● Ability to apply the knowledge acquired within the course of analytic geometry to understand other courses which require such knowledge. ● Ability to model phenomena using the objects of analytic geometry.

7. Objectives of the discipline (outcome of the acquired competencies)

7.1 General objective of the discipline	<ul style="list-style-type: none"> ● Ability to distinguish the objects of analytic geometry in different contexts. ● To get hold of the fundamental theoretical results of analytic geometry.
7.2 Specific objective of the discipline	<ul style="list-style-type: none"> ● The students are expected to acquire the ability to recognize the objects of analytic geometry in different contexts such as other courses studied by themselves which require such knowledge. ● The students are expected to cultivate their abilities acquired within the course of analytic geometry in order to connect and apply them within some other courses studied by themselves which require such knowledge. ● To use the knowledge acquired within the course of analytic geometry in order to apply them in real life problems which lend oneself to analytic approaches.

8. Content

8.1 Course	Teaching methods	Remarks
1. Vectors and operations with vectors.	Exposure: description, explanation, examples	One lecture
2. Reference systems. Systems of coordinates	Exposure: description, explanation, examples	One lecture
3. Various equations of lines and planes	Exposure: description, explanation, examples	Two lectures
4. Vector products (dot product, cross product, triple scalar product)	Exposure: description, explanation, examples	Two lectures
5. Conics	Exposure: description, explanation, examples, proofs, debate, dialogue	Two lectures
6. Quadrics	Exposure: description, explanation, examples, proofs,	Two lectures

	debate, dialogue	
7. Generated surfaces (cylindrical surfaces, conic surfaces, conoidal surfaces, revolution surfaces)	Exposure: description, explanation, examples.	Two lectures
8. Geometric Transformations (reflexions, translations, scalings, projections)	Exposure: description, explanation, examples, proofs	Two lectures

Bibliography

1. Andrica, D., Țopan, L., Analytic Geometry, Cluj University Press, 2004.
2. Eggerton, P.A., Hall, W.S., Computer Graphics. Mathematical First Steps, Prentice Hall, 1999.
3. Pinte, C., Geometrie. Elemente de geometrie analitică. Elemente de geometrie diferențială a curbelor și suprafețelor, Presa universitară clujeană, 2001.
4. Smaranda, D., Soare, N., Transformări geometrice, Editura Academiei RSR, București, 1988.

8.2 Seminar	Teaching methods	Remarks
1. Problems on vector algebra with applications in classical geometry.	Explanation, dialogue, solving problems	One tutorial
2. Problems involving various equations of lines and planes	Dialogue, debate, examples, solving problems	Two tutorials
3. Problems on vector products (dot product, cross product, triple scalar product)	Dialogue, debate, case studies, examples, solving problems	Two tutorials
4. Problems on angles distances and projections		Two tutorials
5. Problems on associated geometric objects to conics, such as tangent lines and normal lines.	Dialogue, debate, examples, solving problems	Two tutorials
6. Problems on associated geometric objects to quadrics, such as tangent plane, normal line and rectilinear generatrices.	Dialogue, debate, examples, solving problems	Two tutorials
7. Examples of cylindrical surfaces, conic surfaces, conoidal surfaces and of revolution surfaces.	Dialogue, debate, examples, solving problems	One tutorial
8. Problems on reflexions, translations, scalings, projections with applications to classical geometry.	Dialogue, debate, examples, solving problems	Two tutorials
