SYLLABUS

1. Information regarding the programme

1.1 Higher education institution	**Babeş-Bolyai University Cluj-Napoca**
1.2 Faculty	**Faculty of Mathematics and Computer Science**
1.3 Department	**Department of Mathematics**
1.4 Field of study	**Mathematics**
1.5 Study cycle	**Master**
1.6 Study programme / Qualification	**Advanced Mathematics (Matematici avansate)**

2. Information regarding the discipline

2.1 Name of the discipline	**Geometric function theory in several complex variables (Teoria geometricã a funcţiilor de mai multe variabile complexe)**						
2.2 Course coordinator	**Professor Gabriela KOHR**						
2.3 Seminar coordinator	**Professor Gabriela KOHR**						
2.4. Year of study	**2**	2.5 Semester	**3**	2.6. Type of evaluation	**C**	2.7 Type of discipline	**Optional/DS**

3. Total estimated time (hours/semester of didactic activities)

3.1 Hours per week	**3**	Of which: 3.2 course	**2**	3.3 seminar/laboratory	**1 sem**
3.4 Total hours in the curriculum	**42**	Of which: 3.5 course	**28**	3.6 seminar/laboratory	**14**
Time allotment:					hours
Learning using manual, course support, bibliography, course notes					42
Additional documentation (in libraries, on electronic platforms, field documentation)					32
Preparation for seminars/labs, homework, papers, portfolios and essays					42
Tutorship					9
Evaluations					8
Other activities:					-

3.7 Total individual study hours	133
3.8 Total hours per semester	175
3.9 Number of ECTS credits	7

4. Prerequisites (if necessary)

4.1. curriculum	• Complex analysis; Real functions; Functional analysis.
4.2. competencies	• The are useful logical thinking and mathematical notions and results from the above mentioned fields

5. Conditions (if necessary)

5.1. for the course	• Classroom with blackboard/video projector
5.2. for the seminar /lab activities	• Classroom with blackboard/video projector

6. Specific competencies acquired

Professional competencies	• Ability to understand and manipulate concepts, individual results and advanced mathematical theories. • Ability to use scientific language and to write scientific reports and papers.
Transversal competencies	• Ability to inform themselves, to work independently or in a team in order to carry out studies and to solve complex problems. • Ability to use advanced and complementary knowledge in order to obtain a PhD in Pure Mathematics, Applied Mathematics, or in other fields that use concepts of complex analysis. • Ability for continuous self-perfecting and study.

7. Objectives of the discipline (outcome of the acquired competencies)

7.1 General objective of the discipline	• Knowledge, understanding and use of main concepts and results of geometric function theory of several complex variables. • Knowledge, understanding and use of methods of complex analysis in one or higher dimensions in the study of special problems in pure and applied mathematics. • Ability to use and apply concepts and fundamental results of advanced mathematics in the study of specific problems of function theory in $\mathbf{C}^n$.
7.2 Specific objective of the discipline	• Acquiring basic and advanced knowledge in geometric function theory in $\mathbf{C}^n$. • Understanding of main concepts and results in the theory of holomorphic mappings on the unit ball in $\mathbf{C}^n$. • Knowledge, understanding and use of advanced topics in mathematics in the study of special problems in several complex variables. • Ability student involvement in scientific research.

8. Content

8.1 Course	Teaching methods	Remarks
1. The Carathéodory family *M* of holomorphic mappings in several complex variables. Growth and distortion results, coefficient bounds. Compactness of the family *M*.	Lectures, modeling, didactical demonstration, conversation. Presentation of alternative explanations.	
2. Starlike mappings on the unit ball in $\mathbf{C}^n$. Necessary and sufficient conditions for starlikeness. Growth, distortion and coefficient bounds.	Lectures, modeling, didactical demonstration, conversation. Presentation of alternative explanations.	
3. Convex mappings on the unit ball in $\mathbf{C}^n$. Necessary and sufficient conditions for convexity on the Euclidean unit ball and the unit polydisc in $\mathbf{C}^n$.	Lectures, modeling, didactical demonstration, conversation. Presentation	

	of alternative explanations.	
4. Growth, distortion and coefficient bounds for convex mappings on the unit ball in $\mathbf{C}^n$.	Lectures, modeling, didactical demonstration, conversation. Presentation of alternative explanations.	
5. Loewner chains and transition mappings (evolution families) in $\mathbf{C}^n$.	Lectures, modeling, didactical demonstration, conversation. Presentation of alternative explanations.	
6. Loewner chains, Herglotz vector fields and the generalized Loewner differential equation in $\mathbf{C}^n$.	Lectures, modeling, didactical demonstration, conversation. Presentation of alternative explanations.	
7. Kernel convergence and biholomorphic mappings on the unit ball in $\mathbf{C}^n$. Applications in the theory of Loewner chains.	Lectures, modeling, didactical demonstration, conversation. Presentation of alternative explanations.	
8. The solutions of the generalized Loewner differential equation in $\mathbf{C}^n$.	Lectures, modeling, didactical demonstration, conversation. Presentation of alternative explanations.	
9. The family $S^0(B^n)$ of biholomorphic mappings with parametric representation on the unit ball in $\mathbf{C}^n$. Characterizations in terms of Loewner chains. Compactness of the family $S^0(B^n)$. Open problems.	Lectures, modeling, didactical demonstration, conversation. Presentation of alternative explanations.	
10. Extreme points and support points associated with the family $S^0(B^n)$. Open problems and conjectures.	Lectures, modeling, didactical demonstration, conversation. Presentation of alternative explanations.	
11. Univalence criteria on the unit ball in $\mathbf{C}^n$ via the theory of Loewner chains. Parametric representation and asymptotic starlikeness in higher dimensions.	Lectures, modeling, didactical demonstration, conversation. Presentation of alternative explanations.	
12. Extension operators that preserve analytic and geometric properties (starlikeness, convexity, Loewner chains, parametric representation) (I).	Lectures, modeling, didactical demonstration, conversation. Presentation of alternative explanations.	
13. Extension operators that preserve analytic and geometric properties (starlikeness, convexity, Loewner chains, parametric representation) (II).	Lectures, modeling, didactical demonstration, conversation. Presentation of alternative explanations.	
14. Radii of univalence (starlikeness, convexity, parametric representation) in higher dimensions.	Lectures, modeling, didactical demonstration, conversation. Presentation of alternative explanations.

8.2 Seminar	Teaching methods	Remarks
1. Examples of mappings in the Carathéodory family *M*. Special subclasses of *M*. Distortion and coefficient bounds.	Applications of course concepts. Description of arguments and proofs for solving problems. Homework assignments. Direct answers to students.	1 hour/week
2. Sufficient conditions of starlikeness on the unit ball in $\mathbf{C}^n$. Examples of starlike mappings.	Applications of course concepts. Description of arguments and proofs for solving problems. Homework assignments. Direct answers to students.	1 hour/week
3. Sufficient conditions of convexity on the unit ball in $\mathbf{C}^n$. Examples of convex mappings.	Applications of course concepts. Description of arguments and proofs for solving problems. Homework assignments. Direct answers to students.	1 hour/week
4. Starlike mappings of order α on the Euclidean unit ball in $\mathbf{C}^n$, $0\leq \alpha<1$. Growth and coefficient bounds. Examples.	Applications of course concepts. Description of arguments and proofs for solving problems. Homework assignments. Direct answers to students.	1 hour/week
5. Loewner chains and transition mappings (evolution families) in several complex variables. Examples.	Applications of course concepts. Description of arguments and proofs for solving problems. Homework assignments. Direct answers to students.	1 hour/week
6. Loewner chains and the associated Loewer PDE in higher dimensions. Applications.	Applications of course concepts. Description of arguments and proofs for solving problems. Homework assignments. Direct answers to students.	1 hour/week
7. The analytical characterizations of starlikeness and spirallikeness of type α on the unit ball in $\mathbf{C}^n$ in terms of Loewner chains.	Applications of course concepts. Description of arguments and proofs for solving problems. Homework assignments. Direct answers to students.	1 hour/week
8. Variation of Loewner chains in $\mathbf{C}^n$.	Applications of course	1 hour/week

Applications.	concepts. Description of arguments and proofs for solving problems. Homework assignments. Direct answers to students.	
9. Bounded mappings with parametric representation on the unit ball in $\mathbf{C}^n$. Growth and coefficient bounds. Applications to extremal problems.	Applications of course concepts. Description of arguments and proofs for solving problems. Homework assignments. Direct answers to students.	1 hour/week
10. Univalence criteria on the unit ball in $\mathbf{C}^n$ via the theory of Loewner chains (I).	Applications of course concepts. Description of arguments and proofs for solving problems. Homework assignments. Direct answers to students.	1 hour/week
11. Univalence criteria on the unit ball in $\mathbf{C}^n$ via the theory of Loewner chains (II).	Applications of course concepts. Description of arguments and proofs for solving problems. Homework assignments. Direct answers to students.	1 hour/week
12. Extension operators that preserve analytic and geometric properties (I).	Applications of course concepts. Description of arguments and proofs for solving problems. Homework assignments. Direct answers to students.	1 hour/week
13. Extension operators that preserve analytic and geometric properties (II).	Applications of course concepts. Description of arguments and proofs for solving problems. Homework assignments. Direct answers to students.	1 hour/week
14. Radii of univalence on the Euclidean unit ball and the unit polydisc in $\mathbf{C}^n$.	Applications of course concepts. Description of arguments and proofs for solving problems. Homework assignments. Direct answers to students.	1 hour/week

9. Corroborating the content of the discipline with the expectations of the epistemic community, professional associations and representative employers within the field of the program

- The content of this discipline is in accordance with the curricula of the most important universities in Romania and abroad, where the advanced mathematics plays an essential role. This discipline is useful in preparing future researchers in pure and applied mathematics, as well as those who use mathematical models and advanced methods of study in other areas.

10. Evaluation

Type of activity	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Share in the grade (%)
10.4 Course	Knowledge of concepts and basic results	Final written test (colloquium) at the end the semester.	60%
	Ability to justify by proofs theoretical results		
10.5 Seminar/lab activities	Ability to apply concepts and results acquired in the course in mathematical modeling and analysis of problems in fluid mechanics	Evaluation of reports and homework during the semester, and active participation in the seminar activity. A midterm written test.	15% 25%
	There are valid the official rules of the faculty concerning the attendance of students to teaching activities.		
10.6 Minimum performance standards			
➢ At least grade 5 (from a scale of 1 to 10) at both final written test and seminar activity during the semester.			

Date — Signature of course coordinator — Signature of seminar coordinator

2.05.2016 — Professor PhD Gabriela KOHR — Professor PhD Gabriela KOHR

Date of approval — Signature of the head of department

Professor Octavian AGRATINI
