

## SYLLABUS

### 1. Information regarding the programme

1.1 Higher education institution	<b>Babeş-Bolyai University, Cluj-Napoca</b>
1.2 Faculty	<b>Faculty of Mathematics and Computer Science</b>
1.3 Department	<b>Department of Computer Science</b>
1.4 Field of study	<b>Computer Science</b>
1.5 Study cycle	<b>Bachelor</b>
1.6 Study programme / Qualification	<b>Computer Science</b>

### 2. Information regarding the discipline

2.1 Name of the discipline (en) (ro)	<b>Data Structures and Algorithms</b>						
2.2 Course coordinator	<b>Lect. PhD. Marian Zsuzsanna</b>						
2.3 Seminar coordinator	<b>Lect. PhD. Marian Zsuzsanna</b>						
2.4. Year of study	<b>1</b>	2.5 Semester	<b>2</b>	2.6. Type of evaluation	<b>E</b>	2.7 Type of discipline	<b>Compulsory</b>
2.8 Code of the discipline	MLE5022						

### 3. Total estimated time (hours/semester of didactic activities)

3.1 Hours per week	3	Of which: 3.2 course	2	3.3 seminar/laboratory	1 sem
3.4 Total hours in the curriculum	42	Of which: 3.5 course	28	3.6 seminar/laboratory	14
Time allotment:					hours
Learning using manual, course support, bibliography, course notes					16
Additional documentation (in libraries, on electronic platforms, field documentation)					8
Preparation for seminars/labs, homework, papers, portfolios and essays					14
Tutorship					6
Evaluations					14
Other activities: .....					
3.7 Total individual study hours	58				
3.8 Total hours per semester	100				
3.9 Number of ECTS credits	4				

### 4. Prerequisites (if necessary)

4.1. curriculum	<ul style="list-style-type: none"> <li>• Fundamentals of programming</li> </ul>
4.2. competencies	<ul style="list-style-type: none"> <li>•</li> </ul>

## 5. Conditions (if necessary)

5.1. for the course	<ul style="list-style-type: none"> <li>• Class room with projector</li> </ul>
5.2. for the seminar /lab activities	<ul style="list-style-type: none"> <li>•</li> </ul>

## 6. Specific competencies acquired

<b>Professional competencies</b>	<p>C4.1. Definition of concepts and basic principles of computer science, and their mathematical models and theories.</p> <p>C4.3. Identification of adequate models and methods for solving real problems</p> <p>C4.5. Adoption of formal models in specific applications from different domains</p>
<b>Transversal competencies</b>	<p>CT1. Apply rules to: organized and efficient work, responsibilities of didactical and scientific activities and creative capitalization of own potential, while respecting principles and rules for professional ethics</p> <p>CT3. Use efficient methods and techniques for learning, knowledge gaining, and research and develop capabilities for capitalization of knowledge, accommodation to society requirements and communication in English.</p>

## 7. Objectives of the discipline (outcome of the acquired competencies)

7.1 General objective of the discipline	<ul style="list-style-type: none"> <li>• Study of data structures that can be used to implement abstract data types (arrays, linked lists, heaps, hash tables, binary trees).</li> </ul>
7.2 Specific objective of the discipline	<ul style="list-style-type: none"> <li>• Study of the concept of abstract data type and the most frequently used abstract data types in application development.</li> <li>• Study of the data structures that can be used to implement these abstract data types.</li> <li>• Develop the ability to work with data stored in different data structures and to compare the complexities of their operations.</li> <li>• Develop the ability to choose the appropriate data structure in order to model and solve real world problems.</li> <li>• Acquire knowledge necessary to work with existing data structure libraries.</li> </ul>

## 8. Content

8.1 Course	Teaching methods	Remarks
<b>1. Introduction. Data structures. Abstract Data Types</b> <ul style="list-style-type: none"> <li>• Data abstractization and encapsulation</li> <li>• Pseudocode conventions</li> <li>• Complexities</li> </ul>	<ul style="list-style-type: none"> <li>- Exposure</li> <li>- Description</li> <li>- Examples</li> <li>- Didactical demonstration</li> </ul>	
<b>2. Arrays. Iterators</b> <ul style="list-style-type: none"> <li>• Dynamic array</li> <li>• Amortized analysis</li> </ul>	<ul style="list-style-type: none"> <li>- Exposure</li> <li>- Description</li> <li>- Conversation</li> <li>- Didactical</li> </ul>	

<ul style="list-style-type: none"> <li>• Interface of an iterator</li> </ul>	demonstration	
<b>3. Linked Lists</b> <ul style="list-style-type: none"> <li>• Singly linked list: representation and operations</li> <li>• Doubly linked list: representation and operations</li> <li>• Iterator for linked lists</li> </ul>	<ul style="list-style-type: none"> <li>- Exposure</li> <li>- Description</li> <li>- Conversation</li> <li>- Didactical demonstration</li> <li>- Case study</li> </ul>	
<b>4. Linked Lists II</b> <ul style="list-style-type: none"> <li>• Sorted linked lists: representation and operations</li> <li>• Circular linked lists: representation and operations</li> <li>• Linked lists on arrays: representation and operations</li> </ul>	<ul style="list-style-type: none"> <li>- Exposure</li> <li>- Description</li> <li>- Conversation</li> <li>- Didactical demonstration</li> </ul>	
<b>5. Abstract Data Types</b> <ul style="list-style-type: none"> <li>• ADT Set: description, domain, interface and possible representations</li> <li>• ADT Map: description, domain, interface and possible representations</li> <li>• ADT Matrix: description, domain, interface and possible representations</li> </ul>	<ul style="list-style-type: none"> <li>- Exposure</li> <li>- Description</li> <li>- Conversation</li> <li>- Didactical demonstration</li> </ul>	
<b>6. Binary Heap</b> <ul style="list-style-type: none"> <li>• Definition, representations, specific operations</li> <li>• HeapSort</li> </ul> <b>ADT List</b> <ul style="list-style-type: none"> <li>• Description, domain, interface and possible representations</li> <li>•</li> </ul>	<ul style="list-style-type: none"> <li>- Exposure</li> <li>- Description</li> <li>- Conversation</li> <li>- Didactical demonstration</li> </ul>	
<b>7. ADT Stack</b> <ul style="list-style-type: none"> <li>• Description, domain, interface and possible representations on arrays and linked lists</li> </ul> <b>ADT Queue</b> <ul style="list-style-type: none"> <li>• Description, domain, interface and possible representations on arrays, circular arrays and linked lists.</li> </ul> <b>Problems solved with stacks and queues</b>	<ul style="list-style-type: none"> <li>- Exposure</li> <li>- Description</li> <li>- Conversation</li> <li>- Didactical demonstration</li> <li>- Case studies</li> </ul>	
<b>8. ADT Deque</b> <ul style="list-style-type: none"> <li>• Description and possible representations</li> </ul> <b>ADT Priority Queue</b> <ul style="list-style-type: none"> <li>• Description, domain, interface and possible representations on arrays, linked lists and heaps</li> </ul>	<ul style="list-style-type: none"> <li>- Exposure</li> <li>- Description</li> <li>- Conversation</li> <li>- Didactical demonstration</li> <li>- Case studies</li> </ul>	
<b>9. Hash Table</b> <ul style="list-style-type: none"> <li>• Direct address tables</li> <li>• Hash tables: description, properties</li> <li>• Collision resolution through separate chaining</li> </ul>	<ul style="list-style-type: none"> <li>- Exposure</li> <li>- Description</li> <li>- Conversation</li> <li>- Didactical demonstration</li> </ul>	

<b>10. Hash Table</b> <ul style="list-style-type: none"> <li>Collision resolution through coalesced hashing</li> <li>Collision resolution through open addressing</li> <li>Containers represented over hash tables</li> </ul>	<ul style="list-style-type: none"> <li>- Exposure</li> <li>- Description</li> <li>- Conversation</li> <li>- Didactical demonstration</li> </ul>	
<b>11. Trees</b> <ul style="list-style-type: none"> <li>Concepts related to trees</li> <li>Applications of trees</li> </ul> <b>Binary Trees</b> <ul style="list-style-type: none"> <li>Description, properties</li> <li>Domain and interface of ADT Binary Tree</li> <li>Operations for ADT Binary Tree: search, add, remove elements</li> <li>Tree traversals: recursive/non recursive algorithms.</li> </ul>	<ul style="list-style-type: none"> <li>- Exposure</li> <li>- Description</li> <li>- Conversation</li> <li>- Didactical demonstration</li> </ul>	
<b>12. Binary Search Trees</b> <ul style="list-style-type: none"> <li>Description, properties</li> <li>Representation</li> <li>Operations: recursive and non-recursive algorithms</li> <li>Containers represented over binary search tables</li> </ul>	<ul style="list-style-type: none"> <li>- Exposure</li> <li>- Description</li> <li>- Conversation</li> <li>- Didactical demonstration</li> </ul>	
<b>13. Balanced Binary Search Trees</b> <ul style="list-style-type: none"> <li>AVL Trees</li> <li>Red-black trees</li> </ul>	<ul style="list-style-type: none"> <li>- Exposure</li> <li>- Description</li> <li>- Conversation</li> <li>- Didactical demonstration</li> </ul>	
<b>14. Applications and data structure libraries in different programming languages (Python, C++, Java, C#)</b>	<ul style="list-style-type: none"> <li>- Examples</li> <li>- Exposure</li> <li>- Description</li> <li>- Conversation</li> <li>- Didactical demonstration</li> </ul>	
<b>Bibliography</b> <ol style="list-style-type: none"> <li>T. Cormen, C. Leiserson, R. Rivest, C. Stein: Introduction to algorithms, Third Edition, The MIT Press, 2009</li> <li>S. Skiena: The algorithms design manual, Second Edition, Springer, 2008</li> <li>N. Karumanchi: Data structures and algorithms made easy, CareerMonk Publications, 2016</li> <li>M. A. Weiss: Data structures and algorithm analysis in Java, Third Edition, Pearson, 2012</li> <li>R. Sedgewick: Algorithms, Addison-Wesley Publishing, 1984</li> </ol>		
<b>8.2 Seminar</b>	<b>Teaching methods</b>	<b>Remarks</b>
		Seminar is structured as 2 hour classes every second week.
1. Complexities	<ul style="list-style-type: none"> <li>- Exposure</li> <li>- Conversation</li> <li>- Examples</li> </ul>	

	- Debate	
2. ADT Bag with a generic elements. Representations and implementations on an array. Iterator for ADT Bag.	- Exposure - Examples - Debate - Conversation	
3. Sorted Multi Map – representation and implementation on a singly linked list.	- Exposure - Examples - Debate - Conversation	
4. Bucket sort, Lexicographic sort, radix sort. Merging two singly linked lists	- Exposure - Examples - Debate - Conversation	
5. Written test and project theme allocation.	- Written test	The test takes 1 hour
6. Hash tables. Collision resolution through coalesced chaining.	- Exposure - Examples - Debate - Conversation	
7. Binary Trees	- Exposure - Examples - Debate - Conversation	

#### Bibliography

1. T. Cormen, C. Leiserson, R. Rivest, C. Stein: Introduction to algorithms, Third Edition, The MIT Press, 2009
2. S. Skiena: The algorithms design manual, Second Edition, Springer, 2008
3. N. Karumanchi: Data structures and algorithms made easy, CareerMonk Publications, 2016
4. M. A. Weiss: Data structures and algorithm analysis in Java, Third Edition, Pearson, 2012
5. R. Sedgwick: Algorithms, Addison-Wesley Publishing, 1984

#### 9. Corroborating the content of the discipline with the expectations of the epistemic community, professional associations and representative employers within the field of the program

- The content of this discipline is consistent with the content of the Data structures and algorithms courses from other universities in Romania and abroad.
- The content of the discipline ensures the necessary fundamental knowledge needed for using abstract data types and data structures in application design.

#### 10. Evaluation

Type of activity	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Share in the grade (%)
10.4 Course	<ul style="list-style-type: none"> <li>• Correctness and completeness of the assimilated knowledge</li> <li>• Knowledge of applying the course concepts</li> </ul>	Written evaluation (in the exam session): written exam	60%

	Realization of a project – design, development and documentation of an application that uses an ADT and a given data structure as representation for the ADT. Project allocation will be done in Seminar 5.	Correctness of the documentation (specifications, algorithms, complexities).	20%
10.5 Seminar activities	<ul style="list-style-type: none"> <li>• Written test from seminar 5.</li> <li>• Seminar activity</li> <li>• Project stage</li> </ul>	Written test (50% from the seminar grade)	20%
		Seminar activity (40% from the seminar grade)	
		Project stage (10% from seminar grade)	
10.6 Minimum performance standards			
<ul style="list-style-type: none"> <li>• Knowledge of basic concepts. Each student has to prove that he/she has acquired an acceptable level of knowledge and understanding of the domain, that he/she is capable of expressing the acquired knowledge in a coherent form, that he/she has the ability of using this knowledge for problem solving.</li> <li>• For participating at the written exam, a student must have at least 5 seminar attendances.</li> <li>• For successfully passing the examination, a student must have at least 5 for the project and as a final grade.</li> </ul>
