

SYLLABUS

1. Information regarding the programme

1.1 Higher education institution	Babeş Bolyai University
1.2 Faculty	Faculty of Mathematics and Computer Science
1.3 Department	Department of Computer Science
1.4 Field of study	Computer Science
1.5 Study cycle	Bachelor
1.6 Study programme / Qualification	Computer Science

2. Information regarding the discipline

2.1 Name of the discipline (en)	Parallel and Distributed Programming		
(ro)	Programare Paralelă și Distribuită		
2.2 Course coordinator	Lect. PhD. Radu Lupşa		
2.3 Seminar coordinator	Lect. PhD. Radu Lupşa		
2.4. Year of study	3	2.5 Semester	5
2.6. Type of evaluation	E	2.7 Type of discipline	Compulsory
2.8 Code of the discipline	MLE5077		

3. Total estimated time (hours/semester of didactic activities)

3.1 Hours per week	5	Of which: 3.2 course	2	3.3 seminar/laboratory	1/2
3.4 Total hours in the curriculum	70	Of which: 3.5 course	28	3.6 seminar/laboratory	42
Time allotment:					hours
Learning using manual, course support, bibliography, course notes					20
Additional documentation (in libraries, on electronic platforms, field documentation)					10
Preparation for seminars/labs, homework, papers, portfolios and essays					30
Tutorship					10
Evaluations					10
Other activities:					-
3.7 Total individual study hours	80				
3.8 Total hours	150				

per semester	
3.9 Number of ECTS credits	6

4. Prerequisites (if necessary)

4.1. curriculum	<ul style="list-style-type: none"> Programming Fundamentals, Object Oriented Programming, Data Structures and Algorithms, Operating Systems
4.2. competencies	<ul style="list-style-type: none"> Programming abilities

5. Conditions (if necessary)

5.1. for the course	<ul style="list-style-type: none"> Lecture room with videoprojector
5.2. for the seminar /lab activities	<ul style="list-style-type: none"> Laboratory with workstations

6. Specific competencies acquired

Professional competencies	The student should prove that he has a good level of knowledge understanding of the field and he is capable of showing the knowledge and can use them in problem solving using parallel and distributing programming.
Transversal competencies	<p>CT1 Application of organized and efficient work rules, of responsible attitudes towards the didactic and scientific domain, for the creative exploitation of their own potential according to the principles and rules of professional ethics</p> <p>CT3 Use of effective methods and techniques of learning, information, research and development of the capacity to exploit knowledge, to adapt to the requirements of a dynamic</p>

7. Objectives of the discipline (outcome of the acquired competencies)

7.1 General objective of the discipline	<ul style="list-style-type: none"> Acquire the main concepts of concurrent, parallel and distributed programming; Basics of communication between processes and threads, on the same machine or on distinct machines; Knowing basic techniques of parallel programming; Knowing and using parallel application design patterns Knowing and using the existing frameworks for developing parallel and distributed applications
7.2 Specific objective of the	<ul style="list-style-type: none"> Parallel architectures and parallel programming systems

discipline	<ul style="list-style-type: none"> • Know how to use parallel programming techniques in problem solving • Know how to evaluate the performance increase obtained by parallelization • Ability to work independent or in a team in order to solve problems in a parallel and/or distributed context
------------	---

8. Content

8.1 Course	Teaching methods	Remarks
1. General introduction: <ul style="list-style-type: none"> • necessity to use parallelism • concurrent vs. parallel vs. distributed computing • levels of parallelism 	Exposition, concepts, examples, case study.	
2. Parallel architectures: <ul style="list-style-type: none"> • Pipeline • Vectorial machines • Grid and cluster computers • Supercomputers 	Exposition, concepts, examples, case study.	
3. : <ul style="list-style-type: none"> • Processes vs threads • Managing the processes/threads 	Exposition, concepts, examples, case study.	
4. Concurrency concepts: <ul style="list-style-type: none"> • race conditions, critical sections, mutual exclusion, deadlock • synchronizations: monitors, semaphores 	Exposition, concepts, examples, case study.	
5. Models of parallelism: <ul style="list-style-type: none"> • Implicit vs. explicit parallelism • data parallelism • message-passing • shared memory 	Exposition, concepts, examples, case study.	
6. Parallel programming in shared memory: C pthreads, C++ threads, Java threads, OpenMP	Exposition, concepts, examples, case study.	
7. Performance evaluation for parallel programs: PRAM (Parallel Random Access Machine). Efficiency, cost, scalability.	Exposition, concepts, examples, case study.	
8. Parallel programming patterns: <ul style="list-style-type: none"> • master-slaves • task farm / work pool • divide et impera • pipeline 	Exposition, concepts, examples, case study.	

9. Message passing parallel programs. MPI	Exposition, concepts, examples, case study.	
10. Phases in a parallel program: PCAM (Partition, Communication, Aggregation, Mapping): <ul style="list-style-type: none"> • task decomposition • domain (geometrical) decomposition • granularity • degree of parallelism • task dependency 	Exposition, concepts, examples, case study.	
11. Parallel programs construction techniques: <ul style="list-style-type: none"> • divide et impera • binary tree • recursive double-back 	Exposition, concepts, examples, case study.	
12. Data parallel programming	Exposition, concepts, examples, case study.	
13. GPGPU (General Processing on the Graphical Processing Unit): OpenCL, CUDA	Exposition, concepts, examples, case study.	
14. Distributed file systems	Exposition, concepts, examples, case study.

Albastra, grupul Microinformatica, Cluj, 2002 .

11. ***, OpenMP Tutorials

12. ***, MPI Tutorials

13. ***, CUDA Tutorials

8.2 Seminar / laboratory	Teaching methods	Remarks
S1 Threads vs processes		
S2 Concurrent programming		
S3 OpenMP		
S4 Parallel design patterns		
S5-S6 MPI		
S7 CUDA/OpenCL		
L1 Threads vs processes		
L2-L5 Concurrent programming C++, Java, C#		
L6-L7 OpenMP		
L8-L10 MPI		
L11-L14 CUDA/OpenCL

9. Corroborating the content of the discipline with the expectations of the epistemic community, professional associations and representative employers within the field of the program

- The course follows ACM and IEEE recommendations for computer science studies
- The course is part of the curricula in all major universities, both local and abroad
- The software companies consider the course content important for acquiring advanced programming abilities.

10. Evaluation

Type of activity	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Share in the grade (%)
10.4 Course	Knowing basic concepts	written exam	40%
	Applying theoretical knowledge in problem solving	project	30%
10.5 Seminar/lab activities	Applying theoretical knowledge in problem solving	evaluation of lab assignments	30%
10.6 Minimum performance standards			
<ul style="list-style-type: none"> ➤ At least 4.5 out of 10 for the written exam ➤ At least 4.5 out of 10 the average
