syllabus

1. Information regarding the programme

1.1 Higher education institution	**"Babes_Bolyai" University**
1.2 Faculty	**Faculty of Mathematics and Computer science**
1.3 Department	**Department of Computer Science**
1.4 Field of study	**Informatics(Computer Science)**
1.5 Study cycle	**Master**
1.6 Study programme / Qualification	**Component based programming**

2. Information regarding the discipline

2.1 Name of the discipline	**Models in Parallel Programming**						
2.2 Course coordinator	**Assoc.Prof.PhD. Niculescu Virginia**						
2.3 Seminar coordinator	**Assoc.Prof.PhD. Niculescu Virginia**						
2.4. Year of study	**1**	2.5 Semester	**1**	2.6. Type of evaluation	**E.**	2.7 Type of discipline	**Compulsory**

3. Total estimated time (hours/semester of didactic activities)

3.1 Hours per week	3	Of which: 3.2 course	2	3.3 seminar/ laboratory	1 sem.
3.4 Total hours in the curriculum	42	Of which: 3.5 course	28	3.6 seminar/ laboratory	14

Time allotment:	hours
Learning using manual, course support, bibliography, course notes	46
Additional documentation (in libraries, on electronic platforms, field documentation)	40
Preparation for seminars/labs, homework, papers, portfolios and essays	46
Tutorship	14
Evaluations	12
Other activities:	-

3.7 Total individual study hours	158
3.8 Total hours per semester	200
3.9 Number of ECTS credits	8

4. Prerequisites (if necessary)

4.1. curriculum	• Algorithms construction and evaluation, Data Structures, Object-oriented and functional programming
4.2. competencies	• Programming skills and basic abilities for dealing with abstractions

5. Conditions (if necessary)

5.1. for the course	• Projector, blackboard
5.2. for the seminar	• Projector, blackboard, computers(laptops)

6. Specific competencies acquired

Professional competencies	• Knowledge, understanding of the basic concepts of parallel programming. • Ability to work independently and/or in a team in order to solve problems in defined professional contexts (models). • Knowledge, understanding of the theoretical foundations of parallel algorithms construction.
Transversal competencies	• Ability to solve problems using parallel programming. • Ability to do research work in the domain of the parallel programming by studing a particular model of parallel computation.

7. Objectives of the discipline (outcome of the acquired competencies)

7.1 General objective of the discipline	• Each student has to prove that (s)he acquired an acceptable level of knowledge and understanding of the subject, that (s)he is capable of stating these knowledge in a coherent form, that (s)he has correct habits of analysis, design, and implementation using different models of parallel computation.
7.2 Specific objective of the discipline	• To present the basic paradigms of parallel programming . • To offer different models of parallel programs development and understanding their necessity and their advantages. • To create the ability to correctly develop parallel algorithms using different models of parallel computation (algorithms from linear algebra, numerical analysis, graph, searching and sorting algorithms)..

8. Content

8.1 **Course**	Teaching methods	Remarks
1. General Introduction to parallel programming: - reasons for using parallel programming; - problems and difficulties in parallel programming; - the necessity of using models Parallel Computer Architectures - *Taxonomies*	Exposure: description, explanation, examples, discussion of case studies	

2. Types of parallelism
 	
  ¥ Implicit parallelism
  ¥ Explicit Parallelism
- Data-parallel model
- Message-passing model
- Shared-variable model
Task Dependency Graph, Task Interaction Graph, Degree of Concurrency, Granularity, Mapping
	Exposure: description, explanation, examples, discussion of case studies	

3. Phases in parallel programs development (PCAM)
 	
  - Partitioning, Communication, Agglomeration, Mapping
 	
Decomposition
  - functional (task decomposition)
  - of the domain(geometrical)
  -       data-distributions
	Exposure: description, explanation, examples, discussion of case studies	

4. Interconnection networks	Exposure: description, explanation, examples, discussion of case studies	
5. Shared Memory Parallel Programming Synchronization problems OpenMP	Exposure: description, explanation, examples, discussion of case studies	
6. Distributed Memory Parallel Programming - MPI	Exposure: description, explanation, examples, discussion of case studies	
7. PRAM models Computational networks Brent Theorem	Exposure: description, explanation, examples, discussion of case studies	
8. Analytical Modeling of Parallel Systems Scalability	Exposure: description, explanation, examples, discussion of case studies	
9. Parallel programming paradigms - Master-slaves - Task-Farm - Work-Pool - Divide &Conquer - Pipeline	Exposure: description, explanation, examples, discussion of case studies	
Bulk Synchronous Parallel programming - BSP - LogP	Exposure: description, explanation, examples, discussion of case studies	

10. Functional parallel programming
 	
Bird-Meertens Formalism (BMF).
 	
  - List Homomorphisms
  - Categorical Data Types
Map-Reduce Model
	Exposure: description, explanation, examples, discussion of case studies	

11. Pares – *A Model for Parallel Recursive Programs*. - Special data structures of parallel recursion: PowerLists, ParLists, PLists	Exposure: description, explanation, examples, discussion of case studies	

12. Interleaving/ Nondeterminancy/ Formal Methods - UNITY *"Unbounded Nondeterministic Iterative Transformations"* model - CSP(Communicating Sequential Processes) model	Exposure: description, explanation, examples, discussion of case studies	

13.
General presentation of the parallel computation models (PCM).
  o   Requierements for PCM
  o   Classification:
    - implicit parallelism
    - implicit decomposition
    - explicit decomposition
    - explicit mapping
    -explicit communication
    - everything explicit
Main Categories of Models
Classification/Comparison of the models for parallel computation.
	Exposure: description, explanation, examples, discussion of case studies

8.2 Seminar	Teaching methods	Remarks
1. Simple examples of parallel programs.	Explanation, dialogue, case studies	The seminar is structured as 2 hours classes every second week
2. Tehniques used in parallel programs construction.	Dialogue, debate, case studies, examples, proofs	
3. PRAM - examples	Dialogue, debate, case studies, examples, proofs	
4. MPI and OpenMP examples	Dialogue, debate, explanation, examples	
5. Student presentations	Dialogue, debate, explanation, examples	
6. Student presentations	Dialogue, debate, explanation, examples	
7. Student presentations	Dialogue, debate, explanation, examples

5. Parallel Programming Model Watch [http://view.eecs.berkeley.edu/wiki/ Parallel_Programming_Model_Watch]

9. Corroborating the content of the discipline with the expectations of the epistemic community, professional associations and representative employers within the field of the program

- The course respects the IEEE and ACM Curricula Recommendations for Computer Science studies;
- The course exists in the studying program of all major universities in Romania and abroad;

10. Evaluation

Type of activity	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Share in the grade (%)
10.4 Course	- know the basic principles and paradigms of the domain;	Written exam	50%
10.5 Seminar	- a research paper (*referat)* that presents a model of parallel computation	-presentation -discussion	50%
10.6 Minimum performance standards			
✶ At least grade 5 (from a scale of 1 to 10) at both written exam and research paper.
