#### **SYLLABUS**

#### **1. Information regarding the programme**

·				
1.1 Higher education institution	Babeş Bolyai University			
1.2 Faculty	Faculty of Mathematics and Computer Science			
1.3 Department	Department of Computer Science			
1.4 Field of study	Computer Science			
1.5 Study cycle	Bachelor			
1.6 Study programme / Qualification	Computer Science			

### 2. Information regarding the discipline

2.1 Name of the discipline				Functional and Logic Programming			
2.2 Course coordinator <b>Prof.Dr. Horia F. Pop</b>							
2.3 Seminar coordinator				Prof.Dr. Horia F. Po	эр		
2.4. Year of	2	2.5	3	2.6. Type of	С	2.7 Type of	Compulsory
study		Semester		evaluation		discipline	

#### 3. Total estimated time (hours/semester of didactic activities)

3.1 Hours per week	4	Of which: 3.2 course	2	3.3 seminar/laboratory	2
3.4 Total hours in the curriculum	56	Of which: 3.5 course	28	3.6 seminar/laboratory	28
Time allotment:					hours
Learning using manual, course support, bibliography, course notes					22
Additional documentation (in libraries, on electronic platforms, field documentation)					18
Preparation for seminars/labs, homework, papers, portfolios and essays					27
Tutorship					11
Evaluations					16
Other activities:			-		
3.7 Total individual study hours		94			

5.7 Total mulvidual study nouis	74
3.8 Total hours per semester	150
3.9 Number of ECTS credits	6

#### 4. Prerequisites (if necessary)

4.1. curriculum	<ul> <li>Fundamentals of Programming</li> <li>Mathematical Foundations of Computer Science</li> </ul>
4.2. competencies	• Average programming skills in a high level programming language

#### 5. Conditions (if necessary)

5.1. for the course	<ul> <li>Students will attend the course with their mobile phones shut down</li> <li>Students will attend the course with their laptops shut down; students with special needs will discuss these at the beginning of the semester</li> </ul>
5.2. for the seminar /lab activities	<ul> <li>Students will attend the lab with their mobile phones shut down</li> <li>Laboratory with computers; high level declarative programming language environment (CLisp, SWIProlog)</li> </ul>

## 6. Specific competencies acquired

II SS	C1.1 Adequate description of programming paradigms and specific language mechanisms, as
na icie	well as identification of differences between semantic and syntactic aspects.
sio	C1.3 Elaboration of adequate source codes and unitary testing of some components in a known
ofessional npetencies	programming language, based on given design specifications.
Pro com	C1.5 Development of program units and elaboration of corresponding documentations.
<b>H</b> 3	

	CT1 Application of efficient and organized work rules, of responsible attitudes towards the
l ies	didactic-scientific domain, to creatively value one's own potential, with the respect towards the
Irsa	principles and norms of professional etic.
sve ete	CT3 Use of efficient methods and techniques to learn, inform, research and develop the abilities
ans	to value the knowledge, to adapt to requirements of a dynamic society and to communicate in
Transversal competencies	Romanian language and in a language of international circulation.

# 7. Objectives of the discipline (outcome of the acquired competencies)

7.1 General objective of the discipline	• Get accustomed with basic notions, concepts, theories and models of new programming paradigms (functional and logic programming)
7.2 Specific objective of the discipline	• Get accustomed with a programming language for each of these paradigms (Common Lisp and Turbo Prolog)
	• Acquire the idea of using these programming paradigms based on the applications' necessities
	• Assure the necessary base for approaching certain advanced courses
	• Ability to apply declarative programming techniques to different real life problems
	• Ability to model phenomena using declarative techniques
	• Improved programming abilities using the declarative paradigm

#### 8. Content

r	Course	Teaching methods	Remarks
1.	Basic elements of Prolog. Facts and rules in Prolog. Goals. The control strategy in Prolog. Variables and composed propositions. Anonymous variables. Rules for matching. The flow model. Sections of a Prolog program. Examples	Exposure: description, explanation, examples, discussion of case studies	
	The Prolog program. Predefined domains. Internal and external goals. Multiple arity predicates. The IF symbol (Prolog) and the IF instruction (other languages). Compiler directives. Arithmetic expressions and comparisons. Input/output operations. Strings	Exposure: description, explanation, examples, discussion of case studies	
3.	Backtracking. The backtracking control. The "fail" and "!"(cut) predicates. Using the "!" predicate. Type of cuts. The "not" predicate. Lists in Prolog. Recursion. Examples for backtracking in Prolog. Finding all solutions in the same time. Examples of predicates in Prolog. Non-deterministic predicates	Exposure: description, explanation, examples, discussion of case studies	
4.	<b>L</b>	Exposure: description, explanation, examples, discussion of case studies	
5.	Recursive data structures. Trees as data structures. Creating and traversing a tree. Search trees. The internal database of Prolog. The "database" section. Declaration of the internal	Exposure: description, explanation, examples, discussion of case studies	

database. Predicates concerning operations with the internal database.		
<ol> <li>6. Advanced issues of Backtracking in Prolog. Files</li> </ol>	Exposure: description,	
management in Prolog.	explanation, examples,	
management in Protog.	proofs, debate, dialogue	
7. Programming and programming languages.	Exposure: description,	
Imperative programming vs. declarative	explanation, examples,	
programming. Introduction. The importance of	discussion of case studies	
the functional programming as a new	discussion of case studies	
programming methodology. History and		
presentation of LISP		
8. Basic elements in Lisp. Dynamic data structures.	Exposure: description,	
Syntactic and semantic rules. Functions'	explanation, examples,	
classification in Lisp. Primitive functions in	discussion of case studies	
Lisp. Basic predicates in Lisp.	discussion of case studies	
9. Predicates for lists; for numbers. Logic and	Exposure: description,	
arithmetic functions. Defining user functions.	explanation, examples,	
The conditional form. The collecting variable	discussion of case studies	
method. Examples		
10. Symbols' managing. Other functions for lists'	Exposure: description,	
accessing. OBLIST and ALIST. Destructive	explanation, examples,	
functions. Comparisons. Other interesting	discussion of case studies	
functions. Examples		
11. Definitional mechanisms. The EVAL form.	Exposure: description,	
Functional forms; the functions FUNCALL and	explanation, examples,	
APPLY. LAMBDA expressions, LABEL	discussion of case studies	
expressions. Generators, functional arguments.		
MAP functions. Iterative forms. Examples		
12. Other elements in Lisp. Data structures. Macro-	Exposure: description,	
definitions. Optional arguments. Examples	explanation, examples,	
	discussion of case studies	
1314. Graded paper in Logic and Functional	Written test	
Programming

8.3 Laboratory	Teaching methods	Remarks	
Lab 1: Recursive algorithms in Pseudocode	Explanation, dialogue,	Problem given at lab 1	
	testing data discussion,	and submitted at lab 1	
	case studies		
Lab 2: Lists in Prolog	Explanation, dialogue,	Problem given at lab 1	
	testing data discussion,	and submitted at lab 2	
	case studies		
Lab 3: Trees in Prolog. Lists management in Prolog.	Explanation, dialogue,	Problem given at lab 2	
	testing data discussion,	and submitted at lab 3	
	case studies		
Lab 4: Backtracking in Prolog	Explanation, dialogue,	Problem given at lab 3	
	testing data discussion,	and submitted at lab 4	
	case studies		
Lab 4: Practical test in Prolog	Practical test	One hour	
Lab 5: Recursive programming in Lisp	Explanation, dialogue,	Problem given at lab 4	
	testing data discussion,	and submitted at lab 5	
	case studies		
Lab 6: Using MAP functions in Lisp.	Explanation, dialogue,	Problem given at lab 5	
	testing data discussion,	and submitted at lab 6	
	case studies		
Lab 7: Practical test in Lisp	Practical test	One hour

# **9.** Corroborating the content of the discipline with the expectations of the epistemic community, professional associations and representative employers within the field of the program

- The course respects the IEEE and ACM Curricula Recommendations for Computer Science studies;
- The course exists in the studying program of all major universities in Romania and abroad;
- The content of the course is concordant with partial competencies for possible occupations from the Grid 1 RNCIS.
