#### **SYLLABUS**

## 1. Information regarding the programme

| 1.1 Higher education institution    | Babeş-Bolyai University                     |
|-------------------------------------|---|
| 1.2 Faculty                         | Faculty of Mathematics and Computer Science |
| 1.3 Department                      | Department of Mathematics                   |
| 1.4 Field of study                  | Computer Science                            |
| 1.5 Study cycle                     | Master                                      |
| 1.6 Study programme / Qualification | Distributed Systems in Internet             |

# 2. Information regarding the discipline

| 2.1 Name of the discipline |      |          | Modular Arithmetics and Cryptography |                           |   |             |    |
|----------------------------|------|----------|--------------------------------------|---------------------------|---|-------------|----|
| 2.2 Course coor            | rdin | ator     |                                      | Prof.PhD. Septimiu Crivei |   |             |    |
| 2.3 Seminar coordinator    |      |          |                                      | Prof.PhD. Septimiu Crivei |   |             |    |
| 2.4. Year of               | 1    | 2.5      | 1                                    | 2.6. Type of              | E | 2.7 Type of | DC |
| study                      |      | Semester |                                      | evaluation                |   | discipline  |    |

# 3. Total estimated time (hours/semester of didactic activities)

| 3.1 Hours per week                  | 3        | Of which: 3.2 course      | 2      | 3.3 seminar/laboratory | 1     |
|-------------------------------------|----------|---------------------------|--------|------------------------|-------|
| 3.4 Total hours in the curriculum   | 42       | Of which: 3.5 course      | 28     | 3.6 seminar/laboratory | 14    |
| Time allotment:                     | •        |                           | ,      |                        | hours |
| Learning using manual, course sup   | pport, b | oibliography, course not  | es     |                        | 28    |
| Additional documentation (in libra  | aries, o | n electronic platforms, f | ield d | ocumentation)          | 28    |
| Preparation for seminars/labs, home | nework   | , papers, portfolios and  | essays | 5                      | 28    |
| Tutorship                           |          |                           |        |                        | 10    |
| Evaluations                         |          |                           |        |                        | 14    |
| Other activities:                   |          |                           |        |                        | 0     |
| 3.7 Total individual study hours    |          | 108                       |        |                        |       |
| 3.8 Total hours 150                 |          |                           |        |                        |       |
| per semester                        |          |                           |        |                        |       |
| 3.9 Number of 6                     |          |                           |        |                        |       |
| ECTS credits                        |          |                           |        |                        |       |

### **4. Prerequisites** (if necessary)

| 4.1. curriculum   |  |
|-------------------|--|
| 4.2. competencies |  |

# **5. Conditions** (if necessary)

| 5.1. for the course                  |  |
|--------------------------------------|--|
| 5.2. for the seminar /lab activities |  |

## 6. Specific competencies acquired

| Professional competencies | <ul> <li>Understanding and use of basic algorithms and mathematical concepts related to cryptography</li> <li>Ability to understand and approach problems and projects of information security</li> </ul> |
|---------------------------|---|
| Transversal competencies  | Ability to work independently and/or in a team in order to solve problems<br>and realize projects in defined professional contexts  |

#### 7. Objectives of the discipline (outcome of the acquired competencies)

| 7.1 General objective of the  | ≤ Study of the main algorithms in cryptography |
|-------------------------------|--|
| discipline                    |  |
| 7.2 Specific objective of the |  |
| discipline                    | applications                                   |

#### 8. Content

|   |                              | 1       |
|---|------------------------------|---------|
| 8.1 Course                                | Teaching methods             | Remarks |
| Algorithm complexity, modular arithmetics | exposition, algorithmization |         |
| 2. Primality and factorization            | exposition, algorithmization |         |
| 3. Finite fields and discrete logarithms  | exposition, algorithmization |         |
| 4. Classical cryptography                 | exposition, algorithmization |         |
| 5. DES, AES                               | exposition, algorithmization |         |
| 6. Stream ciphers                         | exposition, algorithmization |         |
| 7. Block ciphers                          | exposition, algorithmization |         |
| 8. RSA cryptosystem                       | exposition, algorithmization |         |
| 9. ElGamal cryptosystem                   | exposition, algorithmization |         |
| 10. Hash functions                        | exposition, algorithmization |         |
| 11. Digital signatures                    | exposition, algorithmization |         |
| 12. Key-related protocols                 | exposition, algorithmization |         |
| 13. Practical aspects                     | exposition, algorithmization |         |
| 14. Quantum cryptography                  | exposition, algorithmization |         |

# 9. Corroborating the content of the discipline with the expectations of the epistemic community, professional associations and representative employers within the field of the program

The content is directed towards applications of cryptography. The topic is present in many master programs from other universities and has special interest for prospective employers.

#### 10. Evaluation

| Type of activity                   | 10.1 Evaluation criteria              | 10.2 Evaluation methods | 10.3 Share in the |  |
|------------------------------------|---------------------------------------|-------------------------|-------------------|--|
|                                    |                                       |                         | grade             |  |
| 10.4 Course                        | Use of basic concepts in examples     | Presentation            | 1/3               |  |
| 10.5 Seminar/lab                   | Problem solving, project presentation | Test, project           | 2/3               |  |
| 10.6 Minimum performance standards |                                       |                         |                   |  |
| ⇒ Grade 5                          |                                       |                         |                   |  |
