

## SYLLABUS

### 1. Information regarding the programme

1.1 Higher education institution	<b>Babes-Bolyai University</b>
1.2 Faculty	<b>Mathematics and Computer Science</b>
1.3 Department	<b>Computer Science</b>
1.4 Field of study	<b>Computer Science</b>
1.5 Study cycle	<b>Master</b>
1.6 Study programme / Qualification	<b>Data Science for Industry and Society</b>

### 2. Information regarding the discipline

2.1 Name of the discipline			Design of interactive software systems				
2.2 Course coordinator			Ph. D. Assoc. Prof. Adriana-Mihaela Guran				
2.3 Seminar coordinator			Ph. D. Assoc. Prof. Adriana-Mihaela Guran				
2.4. Year of study	1	2.5 Semester	2	2.6. Type of evaluation	E	2.7 Type of discipline	Optional

### 3. Total estimated time (hours/semester of didactic activities)

3.1 Hours per week	3	Of which: 3.2 course	2	3.3 seminar/laboratory	1
3.4 Total hours in the curriculum	42	Of which: 3.5 course	28	3.6 seminar/laboratory	14
Time allotment:					hours
Learning using manual, course support, bibliography, course notes					40
Additional documentation (in libraries, on electronic platforms, field documentation)					45
Preparation for seminars/labs, homework, papers, portfolios and essays					41
Tutorship					5
Evaluations					2
Other activities: .....					
3.7 Total individual study hours	133				
3.8 Total hours per semester	175				
3.9 Number of ECTS credits	7				

### 4. Prerequisites (if necessary)

4.1. curriculum	•
4.2. competencies	•

### 5. Conditions (if necessary)

5.1. for the course	• A room with Internet access and presentation devices
5.2. for the seminar /lab activities	• A room with computers and Internet access

## 6. Specific competencies acquired

<b>Professional competencies</b>	<ul style="list-style-type: none"> <li>• C 3.1. Description of concepts, theories and models used in the field of application</li> <li>• C3.2. Identifying and explaining the basic computer models appropriate to the field of application</li> <li>• C3.3 Use of computer and mathematical models and tools to solve problems specific to the field of application</li> <li>• C3.5 Elaboration of IT components of interdisciplinary projects</li> </ul>
<b>Transversal competencies</b>	<ul style="list-style-type: none"> <li>• CT1 Application of the rules of organized and efficient work, of responsible attitudes towards the didactic-scientific field, for the creative capitalization of one's own potential, respecting the principles and norms of professional ethics</li> <li>• CT2 Efficient development of activities organized in an interdisciplinary group and development of empathic capacities for interpersonal communication, relationships and collaboration with various groups</li> <li>• CT3 The use of efficient methods and techniques for learning, informing, researching and developing the capacities to capitalize on knowledge, to adapt to the requirements of a dynamic society and to communicate in Romanian and in a language of international circulation</li> </ul>

## 7. Objectives of the discipline (outcome of the acquired competencies)

7.1 General objective of the discipline	<ul style="list-style-type: none"> <li>• To understand and approach problems of modeling nature from other sciences</li> <li>• To design/develop usable systems</li> <li>• To be able to evaluate the usability of a system and to be able to find improvement methods regarding the usability of a system</li> <li>• To be aware of accessibility issues in systems design</li> <li>• To be able to develop multiplatform applications</li> </ul>
7.2 Specific objective of the discipline	<p>At the end of the semester students must be able to:</p> <ul style="list-style-type: none"> <li>• understand the human capacities in interaction with software systems</li> <li>• achieve knowledge of psychological aspects of human-computer interaction</li> <li>• understand the importance of real users in the development of interactive systems</li> <li>• indentify the best communication methods with the clients</li> <li>• use knowledge and models form sociological sciences in order to improve the communications with clients</li> <li>• be able to apply user centered design</li> <li>• achieve usability related notions</li> </ul>

	<ul style="list-style-type: none"> <li>• be able to apply automatic usability evaluation methods</li> <li>• design and develop groupware systems</li> <li>• apply interaction design patterns</li> <li>• use interface abstract description languages</li> <li>• develop plastic user interfaces</li> <li>• develop adaptive and adaptative user interfaces</li> </ul>
--	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

## 8. Content

8.1 Course	Teaching methods	Remarks
<b>1. Interaction Design</b> <ul style="list-style-type: none"> <li>• What is ID?</li> <li>• HCI and ID</li> <li>• UCD and ID</li> <li>• Professions in ID</li> </ul>	Presentation, discussions, case studies, problem solving	
<b>2. Basics of Human-Computer Interaction</b> <ul style="list-style-type: none"> <li>• Human factor in HCI</li> <li>• Input/output channels</li> <li>• Capacities, limitations</li> <li>• Computer</li> <li>• Output devices</li> <li>• Virtual reality and 3D devices</li> <li>• Non-conventional interaction devices</li> <li>• Usability</li> <li>• Errors</li> </ul>	Presentation, discussions, case studies, problem solving	
<b>3. Interaction Design Process</b> <ul style="list-style-type: none"> <li>• Interaction design lifecycle models</li> <li>• Needs and requirements</li> <li>• Interaction models</li> <li>• Interaction style</li> </ul>	idem	
<b>4. Task Analysis</b> <ul style="list-style-type: none"> <li>• Fundamentals of task analysis</li> <li>• Task analysis methods: HTA, GTA</li> <li>• Task analysis tools: EUTERPE, CTTE</li> <li>• The Bridge Method</li> </ul>	idem	
<b>5. Interdisciplinary approaches in Usability Engineering – a focus on user needs analysis</b> <ul style="list-style-type: none"> <li>• Qualitative vs quantitative approaches</li> <li>• A framework for early usability integration in the development of interactive software systems</li> </ul>	idem	
<b>6. Conceptual Models in Interaction Design</b> <ul style="list-style-type: none"> <li>• Conceptual models</li> </ul>	idem	

<ul style="list-style-type: none"> <li>• Metaphors</li> <li>• Interaction modes</li> </ul>		
<b>7. Prototyping vs. Pretotyping</b> <ul style="list-style-type: none"> <li>• prototyping</li> <li>• pretotyping</li> <li>• case studies</li> </ul>	idem	
<b>8. Graphic elements in user interfaces</b> <ul style="list-style-type: none"> <li>• Basic graphic elements in UIs</li> <li>• Criteria and recommendations for graphic elements</li> <li>• Focus, flow and layout in UI design</li> </ul>	idem	
<b>9. Usability engineering &amp; User experience</b> <ul style="list-style-type: none"> <li>• What is usability?</li> <li>• Designing for usability</li> <li>• Usability engineering lifecycle</li> <li>• Usability metrics</li> <li>• Measuring user experience</li> </ul>	idem	
<b>10. Web Usability&amp; Mobile Usability</b> <ul style="list-style-type: none"> <li>• Designing for web</li> <li>• Designing for mobile</li> </ul>	idem	
<b>11. Designing for accessibility</b> <ul style="list-style-type: none"> <li>• Disabilities</li> <li>• Accessibility</li> <li>• Accessibility APIs</li> <li>• Accessibility evaluation</li> <li>• </li> </ul>	idem	
<b>12. Designing Gestural Interfaces</b> <ul style="list-style-type: none"> <li>• Gesture definition</li> <li>• Gesture in everyday life</li> <li>• Designing interactive gestures</li> <li>• Interface conventions</li> </ul>	idem	
<b>13. Designing Social Interfaces</b> <ul style="list-style-type: none"> <li>• History of computer mediated interaction</li> <li>• Social network vs. social media</li> </ul>	idem	
<b>14. User Interface Testing</b> <ul style="list-style-type: none"> <li>• <b>GUI Testing</b></li> <li>• <b>Model-based testing</b></li> <li>• <b>Web applications testing</b></li> </ul>	idem	

#### Bibliography:

2. Donald A. Norman - Emotional Design - Why we love (or hate) everyday things, 2004
3. Martijn van Welie - Task-based User Interface Design, 2001
4. Donald A Norman - The design of everyday things, basic Books, 1988
5. Fabio Paterno - Model-based design and evaluation of interactive applications, Springer, 1999
6. Jennifer Tidwell - Designing Interfaces: Patterns for Effective Interaction Design, O'Reilly, 2005
7. Jacob Nielsen - Usability Engineering, Academic Press, 1993
8. Marc Hassenzahl- Experience Design: Technology For All The Right Reason, Morgan & Claypool, 2010
9. Alberto Savoya – Prototyping IT, 2011
10. Tom Tullis, William Albert – Measuring the User Experience: Collecting, Analyzing, and Presenting Usability Metrics. Morgan Kaufmann Publishers Inc., San Francisco, CA, USA, 2008

8.2 Seminar / laboratory	Teaching methods	Remarks
Students will have to choose a project subject referring a medium size application that will be developed using a user centered approach (week 4). The project will be developed in teams of 3-5 members	Discussions, case studies, problem solving	
<p>Project design and development :</p> <ol style="list-style-type: none"><li>1. Users identification</li><li>2. Justify the need for the proposed product</li><li>3. Functionalities identification (Week 4-Week 6)</li><li>4. Building the conceptual model</li><li>5. Creating prototypes</li><li>6. Evaluating prototypes (Week 8)</li><li>7. Applying the required changes to the prototype</li><li>8. Usability testing (Week 11)</li><li>9. Applying changes to the developed product in order to be used by people with disabilities/ designing an non-conventional interaction method to the product (Week 14)</li></ol>		

#### **9. Corroborating the content of the discipline with the expectations of the epistemic community, professional associations and representative employers within the field of the program**

- Students will be able to design interaction based on a user centred approach and to evaluate the quality of their prototypes, enhancing the quality of the developed products

--

## 10. Evaluation

Type of activity	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Share in the grade (%)
10.4 Course		Technical Report	10%
10.5 Seminar/lab activities	Project – students will be graded based on the quality of their projects	Grading will be done for every stage in project development.	70%
	Laboratory	Completion in time of each step in the UCD process	20%
10.6 Minimum performance standards			
➤ Students have to deliver a working software product that satisfies the client requirements.
