SYLLABUS

Formal models of concurrent processes

University year 2025-2026

1. Information regarding the programme

1.1. Higher education institution	Babeș-Bolyai University
1.2. Faculty	Faculty of Mathematics and Computer Science
1.3. Department	Department of Computer Science
1.4. Field of study	Computer Science
1.5. Study cycle	Master
1.6. Study programme/Qualification	High performance computing and big data analysis
1.7. Form of education	Full time

2. Information regarding the discipline

2.1. Name of the dis	scipli	ne Formal m	mal models of concurrent processes			Discipline code	MME8094
2.2. Course coordinator Assoc.prof.phd Adrian Sterca							
2.3. Seminar coordinator Assoc.prof.phd Adrian Sterca							
2.4. Year of study	1	2.5. Semester	1	2.6. Type of evaluation	Е	2.7. Discipline regime	Mandatory

3. Total estimated time (hours/semester of didactic activities)

3.1. Hours per week	4	of which: 3.2 course	2	3.3 seminar/laboratory/project	2
3.4. Total hours in the curriculum	56	of which: 3.5 course	28	3.6 seminar/laboratory/project	28
Time allotment for individual study (l	D) and	self-study activities (S	A)		hours
Learning using manual, course support,	bibliogra	aphy, course notes (SA)			30
Additional documentation (in libraries, o	on electr	onic platforms, field doo	cumenta	tion)	30
Preparation for seminars/labs, homework, papers, portfolios and essays					35
Tutorship					
Evaluations					
Other activities:					
3.7. Total individual study hours 119					
3.8. Total hours per semester	nester 175				
3.9. Number of ECTS credits 7					

4. Prerequisites (if necessary)

4.1. curriculum	Distributed operating systems, Concurrent and distributed programming
4.2. competencies	Concurrent and distributed programming

5. Conditions (if necessary)

5.1. for the course	Class room with a video projector device		
5.2. for the seminar /lab activities			
(1 Superification provides a service d 1			

6.1. Specific competencies acquired ¹

¹ One can choose either competences or learning outcomes, or both. If only one option is chosen, the row related to the other option will be deleted, and the kept one will be numbered 6.

Professional/essential competencies	•	Capability of analysis and synthesis; Efficient modeling and solving real-life problems;
Transversal competencies	•	Team work capabilities; able to fulfill different roles; Professional communication skills; concise and precise description, both oral and written, of professional results, negociation abilities;

6.2. Learning outcomes

Knowledge	• The student/graduate knows the most important formalisms for describing concurrent processes
Skills	 The student/graduate is able to use novel algorithms, software infrastructures and methodologies for the purpose of processing (store, retrieve, analyze) large amounts of data The student/graduate is able to coordinate project management activities, using decision-making skills, critical and innovative thinking, as well as digital skills
Responsibility and autonomy:	 The student/graduate manages a workflow and interacts inside a team, makes decisions and manages unforeseen situations, develops creative ideas and innovative techniques The student/graduate assumes responsibility for the product of his / her work, requests feedback and uses it constructively

7. Objectives of the discipline (outcome of the acquired competencies)

7.1 General objective of the discipline	• The course offers a strong theoretical approach in modelling concurrent and distributed systems
7.2 Specific objective of the discipline	• The course presents several formalisms for describing concurrent processes

8. Content

Г

8.1 Course	Teaching methods	Remarks
1. Serialization, concurrency and parallelism	Exposure:description,	
	explanation,examples,	
	discussion of case studies	

2. Concurrent programming paradigms: shared	Exposure:description,	
memory, message passing, transactional	explanation,examples,	
memory	discussion of case studies	
3. Concurrency models for transactional	Exposure:description,	
systems. The Page Model. The Object model	explanation,examples,	
	discussion of case studies	
4. Concurrency control – serializability criteria	Exposure:description,	
(Page Model)	explanation,examples,	
	discussion of case studies	
5. Concurrency control – serializability criteria	Exposure:description,	
(Page Model)	explanation, examples,	
	discussion of case studies	
6. Concurrency control algorithms (Page	Exposure:description.	
Model)	explanation.examples.	
	discussion of case studies	
7 Multiversioning data	Exposure description	
	explanation examples	
	discussion of case studies	
8 Concurrency control – serializability criteria	Fxposure:description	
and algorithms (Object Model)	explanation examples	
	discussion of case studies	
0 Egiluro rocovoru	Evposureidoscription	
9. Failure recovery	exposure:uescription,	
	diaguasion of appointudion	
10. Concurrency control in distributed context	Exposure:description,	
	explanation,examples,	
	discussion of case studies	
11. Process algebra l	Exposure:description,	
	explanation,examples,	
	discussion of case studies	
12. Process algebra II	Exposure:description,	
	explanation,examples,	
	discussion of case studies	
13. CCS – Calculus of Communicating Systems	Exposure:description,	
	explanation,examples,	
	discussion of case studies	
14. Pi-Calculus	Exposure:description,	
	explanation,examples,	
	discussion of case studies

2005.	, , ,	
8.2 Seminar / Jahoratory	Teaching methods	Remarks
1 Discussions related to the project or report's	Dialog debate case	
subject	studies examples	
2 Discussions related to the project or report's	Dialog dobata casa	
2. Discussions related to the project of report s	studios overnles	
2 Diaguagiana valatad ta tha martia ta arrest	Studies, examples	
5. Discussions related to the project or report's	Dialog, debate, case	
subject	studies, examples	
4. Report presentations	Dialog, debate, case	
	studies, examples	
5. Report presentations	Dialog, debate, case	
	studies, examples	

6. Project presentations	Dialog, debate, case studies, examples			
7. Project presentations	Dialog, debate, case studies, examples			
Bibliography Recent articles from ACM Digital Library and IEEE Xplore				

9. Corroborating the content of the discipline with the expectations of the epistemic community, professional associations and representative employers within the field of the program

- The course respects the IEEE and ACM Curriculla Recommendations for Computer Science studies;
- The course exists in the studying programs of all major universities in Romania and abroad;

10. Evaluation

Activity type	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Percentage of final grade		
10.4 Course	Knowing the formalisms for describing concurrency presented during the course	Examination	30%		
10.5 Seminar/laboratory	Ability to understand recent research and relate it to theoretical concepts presented at the course	Project Research report	40% 30%		
10.6 Minimum standard of performance					

• In order to successfully pass this course, students must get at least 5 at each of the 3 examination tasks.

11. Labels ODD (Sustainable Development Goals)²

² Keep only the labels that, according to the *Procedure for applying ODD labels in the academic process*, suit the discipline and delete the others, including the general one for *Sustainable Development* – if not applicable. If no label describes the discipline, delete them all and write *"Not applicable."*.

Not applicable.
