# **SYLLABUS**

# **Computational Logic**

# University year 2025-2026

# 1. Information regarding the programme

1.1. Higher education institution	Babeş-Bolyai University, Cluj-Napoca
1.2. Faculty	Faculty of Mathematics and Computer Science
1.3. Department	Department of Computer Science
1.4. Field of study	Computer Science
1.5. Study cycle	Bachelor
1.6. Study programme/Qualification	Artificial Intelligence
1.7. Form of education	Full time

## 2. Information regarding the discipline

2.1. Name of the dis	scipli	ne <b>Computat</b>	iona	ll Logic			Discipline code	MLE5055
2.2. Course coordin	nator				Le	ecture	r Ph.D. Lupea Mihaiela	
2.3. Seminar coord	inato	or			Le	ecture	r Ph.D. Lupea Mihaiela	
2.4. Year of study	1	2.5. Semester	1	2.6. Type of evaluation	on	Е	2.7. Discipline regime	Compulsory

## 3. Total estimated time (hours/semester of didactic activities)

3.1. Hours per week	4	of which: 3.2 course	2	3.3 seminar/laboratory/project	2
3.4. Total hours in the curriculum	56	of which: 3.5 course	28	3.6 seminar/laboratory/project	28
Time allotment for individual study (	ID) and	self-study activities (S	A)		hours
Learning using manual, course support,	bibliogr	aphy, course notes (SA)			25
Additional documentation (in libraries,	on electr	onic platforms, field do	cumenta	ition)	10
Preparation for seminars/labs, homewo	rk, pape	rs, portfolios and essays	5		30
Tutorship					9
Evaluations					20
Other activities:					
3.7. Total individual study hours			Ģ	94	
3.8. Total hours per semester			1	50	
3.9. Number of ECTS credits				6	

### 4. Prerequisites (if necessary)

4.1. curriculum	-
4.2. competencies	-

# 5. Conditions (if necessary)

5.1. for the course	-
5.2. for the seminar /lab activities	-

# 6.1. Specific competencies acquired <sup>1</sup>

Professional/essential competencies	<ul> <li>Create data models.</li> <li>Analyze software specifications.</li> </ul>
Transversal competencies	<ul> <li>Think analytically.</li> <li>Show initiative.</li> <li>Assume responsability.</li> </ul>

#### 6.2. Learning outcomes

Knowledge	<ul> <li>The graduate knows and understands the concepts and the techniques of knowledge representation and is able to apply them for problem solving.</li> <li>The graduate knows and understands the mathematical foundations needed to develop intelligent algorithms and is capable of using them for algorithm implementation.</li> </ul>
Skills	<ul> <li>The graduate is able to formally describe issues addressed in various areas, and to model them as problems that can be addressed using Artificial Intelligence techniques.</li> <li>The graduate is able to apply fundamental algorithms of Artificial Intelligence in order to solve real-world problems.</li> </ul>
Responsibility and autonomy:	<ul> <li>The graduate is able to develop strategies for solving learning problems starting from the methods and techniques of Artificial Intelligence, knowing the advantages and limitations of known algorithms in this field.</li> <li>The graduate has the necessary knowledge to review the literature and use international databases and international digital research libraries.</li> </ul>

## 7. Objectives of the discipline (outcome of the acquired competencies)

7.1 General objective of the discipline	<ul> <li>To introduce the logical foundations of computer science: propositional calculus and predicate calculus, theorem proving methods, Boolean algebra and Boolean functions. The connection with logic circuits is presented.</li> <li>To introduce internal representations of integer and real numbers.</li> </ul>
---	---

<sup>&</sup>lt;sup>1</sup> One can choose either competences or learning outcomes, or both. If only one option is chosen, the row related to the other option will be deleted, and the kept one will be numbered 6.

7.2 Specific objective of the discipline	<ul> <li>Understand how integer and real numbers are represented and manipulated internally by a computer.</li> <li>Understand the functionality of some simple logic circuits from the hard component of a computer.</li> <li>Identify and apply appropriate logical (propositional/predicate) models and proof methods to solve real problems in the domain of human and mathematical reasoning.</li> </ul>
--	---

#### 8. Content

8.1 Course	Teaching methods	Remarks
<ul> <li>Course 1. Numeration systems</li> <li>1. Definitions, representation of numbers in a base b.</li> <li>2. Conversions between bases using the <i>substitution method</i> and the <i>method of successive divisions/multiplications</i> for integer and rational numbers.</li> <li>3. Rapid conversions (bases 2,4,8,16).</li> </ul>	Exposure: description, explanation, examples, discussion of case studies	
<ul> <li>Course 2. Internal representations of numbers</li> <li>1. Representation of unsigned integers, operations.</li> <li>2. Representation of signed integers: direct code, inverse code, complementary code, operations.</li> <li>3. Fixed-point and floating-point representations of real numbers.</li> </ul>	Exposure: description, explanation, examples, discussion of case studies	
<ul> <li>Course 3.</li> <li>Propositional logic - syntax and semantics</li> <li>1. Syntax: connectives, formulas.</li> <li>2. Semantics: interpretation, model, consistent formula, inconsistent formula, tautology, logical consequence, truth table for a formula.</li> <li>3. Laws (logical equivalences): DeMorgan, absorption, commutativity, associativity, distributivity, idempotency.</li> <li>4. Clauses and normal forms: conjunctive normal form (CNF) and disjunctive normal form (DNF), algorithm for transformation of a formula into DNF and CNF.</li> </ul>	Exposure: description, explanation, examples, discussion of case studies, debate, dialog	
<ul> <li>Course 4. Propositional logic - formal system</li> <li>1. Formal (axiomatic) system associated to propositional logic, deduction, theorem.</li> <li>2. Theorem of deduction and its consequences.</li> <li>3. Properties of propositional logic.</li> </ul>	Exposure: description, explanation, examples, discussion of case studies, proofs, dialog	
<ol> <li>Course 5. Predicate (first-order) logic</li> <li>Syntax: connectives, quantifiers, terms, atoms, formula, clause, literal, closed formula, free formula, the formal (axiomatic) system.</li> <li>Semantics of predicate logic: interpretation, model, valid formula, consistent formula, inconsistent formula, logical consequence.</li> <li>Properties of predicate logic.</li> </ol>	Exposure: description, explanation, examples, discussion of case studies, dialog	

<ul> <li>Course 6. Semantic tableaux method - a refutation proof method for propositional/predicate logic.</li> <li>1. Classes of formulas, decomposition rules, branch (open, closed), construction of a semantic tableau.</li> <li>2. Build the models and anti-models of a propositional/predicate formula from its semantic tableau.</li> </ul>	Exposure: description, explanation, examples, discussion of case studies, proofs	
<ol> <li>Course 7. Resolution in propositional logic</li> <li>Resolution as a formal system.</li> <li>Strategies of resolution: level saturation, set-of-support.</li> <li>Refinements of resolution: lock resolution, linear resolution.</li> </ol>	Exposure: description, explanation, examples, discussion of case studies	
<ul> <li>Course 8. Resolution in predicate logic</li> <li>Prenex normal form, Skolem theorem, Skolemization algorithm, clausal normal form.</li> <li>Substitutions and unifications.</li> <li>Predicate resolution – formal system.</li> <li>Refinements of predicate resolution.</li> </ul>	Exposure: description, explanation, examples, discussion of case studies, proofs	
Course 9. Modeling the common-sense human reasoning and mathematical reasoning using propositional and predicate logics.	Exposure: explanation, examples, discussion of case studies	
<ol> <li>Course 10. Boolean algebras and Boolean functions</li> <li>Boolean algebras: definitions, properties, principle of duality, examples;</li> <li>Boolean functions: definitions, maxterms, minterms, the canonical disjunctive/conjunctive forms, transformation.</li> <li>Maximal and central monoms, factorization.</li> </ol>	Exposure: description, explanation, examples, discussion of case studies, dialog, debate	
<ul> <li>Course 11. Simplification of Boolean functions (I)</li> <li>1. Veitch-Karnaugh diagrams method for functions of 2-3-4 variables.</li> <li>2. The dual simplification algorithm for the canonical conjunctive form.</li> </ul>	Exposure: description, explanation, examples	
<ul> <li>Course 12. Simplification of Boolean functions (II)</li> <li>1. Quine's analytical method.</li> <li>2. Moisil's algebraic method.</li> </ul>	Exposure: description, explanation, examples, discussion of case studies	
<ul> <li>Course 13. Logic circuits</li> <li>1. Definitions, representations for basic gates and derived gates.</li> <li>2. Logic circuit analysis and synthesis.</li> <li>3. Comparator, adder, subtractor, encoder, decoder.</li> </ul>	Exposure: description, explanation, examples, discussion of case studies	
Course 14. Combinational logic circuits - examples	Exposure: description, explanation, examples

8.2 Seminar / laboratory	Teaching methods	Remarks
<b>Seminar 1. Exercises - operations</b> Operations (addition, subtraction, division, multiplication) in different numeration bases.	Dialogue, case studies, examples	Attendance to seminars is mandatory for at least 75%.
<ul> <li>Seminar 2: Exercises - conversions</li> <li>1. Conversions between bases for integer and rational numbers using the methods: substitution, successive divisions/multiplications.</li> <li>2. Rapid conversions between bases: 2,4,8,16.</li> </ul>	Dialogue, case studies, examples	
<ul> <li>Seminar 3. Exercises - representations</li> <li>1. Representation of signed integers: direct code, inverse code, complementary code, operations.</li> <li>2. Representations of real numbers: fixed-point and floating-point representations.</li> </ul>	Dialogue, case studies, examples	
<ul> <li>Seminar 4. Exercises:</li> <li>1. Using the truth table, decide whether a formula is consistent/ tautology/inconsistent or not. Write all the models/anti-models of a formula.</li> <li>2. Transform a formula into its normal equivalent forms (DNF, CNF) and using these forms decide the validity or inconsistency of a formula.</li> </ul>	Dialogue, debate, case studies, examples, students presentations	
<ul> <li>Seminar 5. Exercises</li> <li>1. Apply the theorem of deduction to prove the syllogism rule, separations of premises rule, reunion of premises rule.</li> <li>2. Using the axiomatic system prove that a propositional formula is a theorem.</li> </ul>	Dialogue, debate, case studies, examples, proofs, students presentations	
<ul> <li>Seminar 6.</li> <li>One hour - midterm exam: written paper with subjects from courses 1-2 and seminars 1-3.</li> <li>Exercises - predicate logic</li> <li>1. Transform natural language sentences into predicate formulas.</li> <li>2. Build models and anti-models for a predicate formula.</li> </ul>	Dialogue, debate, case studies, examples, students presentations	Attendance to the midterm exam is mandatory
<ol> <li>Seminar 7. Exercises - semantic tableaux method (I)</li> <li>Build the semantic tableau of a propositional formula, write all its models and anti-models.</li> <li>Solve the decision problems in propositional logic.</li> </ol>	Dialogue, debate, case studies, examples, students presentations	
<ul> <li>Seminar 8. Exercises - semantic tableaux method (II)</li> <li>1. Using the semantic tableaux method solve the decision problems in predicate logic.</li> </ul>	Dialogue, debate, case studies, examples, students presentations	

Dialogue, debate, case studies, examples, students presentations
Dialogue, debate, case studies, examples, students presentations

# 9. Corroborating the content of the discipline with the expectations of the epistemic community, professional associations and representative employers within the field of the program

- The course respects the IEEE and ACM Curricula Recommendations for Computer Science studies;
- The course exists in the studying program of all major universities in Romania and abroad;
- The content of the course offers a theoretical base for the applicative direction of building automated proof systems useful in mathematics, software engineering, intelligent agents, robotics, natural languages and computer vision.

#### 10. Evaluation

Activity type	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Percentage of final grade	
10.4 Course	<ul> <li>Know the basic principles of the domain;</li> <li>Apply the course concepts, methods and algorithms in problem solving.</li> </ul>	Written paper (regular session) with subjects from courses 3-13.	60%	
	<ul> <li>Know to perform operations and conversions in different numeration bases;</li> <li>Know to represent integer and real numbers.</li> </ul>	Midterm exam - written paper (seminar 6 - one hour) with subjects from courses 1-2 and seminars 1-3.	20%	
10.5 Seminar/laboratory	Solve at home and present during the seminars exercises from an existing benchmark of problems	Seminars' activity: responses and individual presentations of solved exercises.	20%	
	Exercises: modelling reasoning using propositional/predicate logic.	Optional homework (can increase the final grade).	10%	
10.6 Minimum stand	ard of performance			
• At least grade 5 (from a scale of 1 to 10) at written papers and seminars' activity.				

## 11. Labels ODD (Sustainable Development Goals)<sup>2</sup>

Not applicable.

Date:

...

Signature of course coordinator

Signature of seminar coordinator

15.04.2025

Lect. PhD. Mihaiela LUPEA

Lect. PhD. Mihaiela LUPEA

Date of approval:

Signature of the head of department

Assoc. Prof. PhD. Adrian STERCA

<sup>&</sup>lt;sup>2</sup> Keep only the labels that, according to the *Procedure for applying ODD labels in the academic process*, suit the discipline and delete the others, including the general one for *Sustainable Development* – if not applicable. If no label describes the discipline, delete them all and write *"Not applicable."*.
