

# SYLLABUS

## *Fundamentals of Machine Learning*

University year **2025-2026**

### 1. Information regarding the programme

|                                    |                                                    |
|------------------------------------|----------------------------------------------------|
| 1.1. Higher education institution  | <i>Babeş-Bolyai University</i>                     |
| 1.2. Faculty                       | <i>Faculty of Mathematics and Computer Science</i> |
| 1.3. Department                    | <i>Department of Computer Science</i>              |
| 1.4. Field of study                | <i>Computer Science</i>                            |
| 1.5. Study cycle                   | <i>Bachelor</i>                                    |
| 1.6. Study programme/Qualification | <i>Computer Science</i>                            |
| 1.7. Form of education             | <i>Full time</i>                                   |

### 2. Information regarding the discipline

|                             |  |   |                                  |  |   |                         |  |                 |                        |         |            |
|-----------------------------|--|---|----------------------------------|--|---|-------------------------|--|-----------------|------------------------|---------|------------|
| 2.1. Name of the discipline |  |   | Fundamentals of Machine Learning |  |   |                         |  | Discipline code |                        | MLE5228 |            |
| 2.2. Course coordinator     |  |   |                                  |  |   | Lect. Dr. Bogdan MURSA  |  |                 |                        |         |            |
| 2.3. Seminar coordinator    |  |   |                                  |  |   | Lect. Dr. Bogdan MURSA  |  |                 |                        |         |            |
| 2.4. Year of study          |  | 2 | 2.5. Semester                    |  | 4 | 2.6. Type of evaluation |  | E               | 2.7. Discipline regime |         | Compulsory |

### 3. Total estimated time (hours/semester of didactic activities)

|                                                                                       |     |                      |    |                                |              |
|---------------------------------------------------------------------------------------|-----|----------------------|----|--------------------------------|--------------|
| 3.1. Hours per week                                                                   | 5   | of which: 3.2 course | 2  | 3.3 seminar/laboratory/project | 2lab         |
| 3.4. Total hours in the curriculum                                                    | 70  | of which: 3.5 course | 28 | 3.6 seminar/laboratory/project | 28           |
| <b>Time allotment for individual study (ID) and self-study activities (SA)</b>        |     |                      |    |                                | <b>hours</b> |
| Learning using manual, course support, bibliography, course notes (SA)                |     |                      |    |                                | 25           |
| Additional documentation (in libraries, on electronic platforms, field documentation) |     |                      |    |                                | 29           |
| Preparation for seminars/labs, homework, papers, portfolios and essays                |     |                      |    |                                | 30           |
| Tutorship                                                                             |     |                      |    |                                | 7            |
| Evaluations                                                                           |     |                      |    |                                | 3            |
| Other activities:                                                                     |     |                      |    |                                | -            |
| <b>3.7. Total individual study hours</b>                                              | 94  |                      |    |                                |              |
| <b>3.8. Total hours per semester</b>                                                  | 150 |                      |    |                                |              |
| <b>3.9. Number of ECTS credits</b>                                                    | 6   |                      |    |                                |              |

### 4. Prerequisites (if necessary)

|                   |                                         |
|-------------------|-----------------------------------------|
| 4.1. curriculum   | Algorithms, data structures, statistics |
| 4.2. competencies | Average programming skills              |

### 5. Conditions (if necessary)

|                                      |                                             |
|--------------------------------------|---------------------------------------------|
| 5.1. for the course                  | Projector                                   |
| 5.2. for the seminar /lab activities | Computers, specific development environment |

### 6.1. Specific competencies acquired <sup>1</sup>

<sup>1</sup> One can choose either competences or learning outcomes, or both. If only one option is chosen, the row related to the other option will be deleted, and the kept one will be numbered 6.

|                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Professional/essential competencies | <p>CE1.1 Description of artificial intelligence concepts and research directions</p> <p>CE1.2 Evaluation of the quality and stability of the obtained solutions and their comparison with the solutions obtained by traditional methods</p> <p>CE1.3 Using artificial intelligence methods, techniques and algorithms to model solutions to classes of problems</p>                                                                                                                               |
| Transversal competencies            | <p><b>CT1.</b> Application of efficient work rules and responsible attitudes towards the scientific domain, for the creative exploitation of one's own potential according to the principles and rules of professional ethics</p> <p><b>CT3.</b> Use of efficient methods and techniques for learning, information, research and development of abilities for knowledge exploitation, for adapting to the needs of a dynamic society and for communication in a widely used foreign language.</p> |

## 6.2. Learning outcomes

|                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Knowledge                    | <ul style="list-style-type: none"> <li>• The graduate knows, understands and applies the basic concepts and the fundamental algorithms of Artificial Intelligence and is able to evaluate them based on metrics.</li> <li>• The graduate knows and understands the concepts and the techniques of knowledge representation and is able to apply them for problem solving.</li> </ul>                                                                                                                                                                               |
| Skills                       | <ul style="list-style-type: none"> <li>• The graduate is able to identify complex issues and examine related issues in order to design several solutions and implement these solutions.</li> <li>• The graduate is able to apply fundamental algorithms of Artificial Intelligence in order to solve real-world problems.</li> <li>• The graduate is able to evaluate, both quantitatively and qualitatively, the performance of intelligent systems.</li> </ul>                                                                                                   |
| Responsibility and autonomy: | <ul style="list-style-type: none"> <li>• The graduate is able to apply architectural templates, design templates and best practices in the field to design highly complex software applications.</li> <li>• The graduate has the necessary skills to apply various methods and tools for analysis and visualizing the results of the used Artificial Intelligence algorithms and techniques.</li> <li>• The graduate has the necessary knowledge to review the literature and use international databases and international digital research libraries.</li> </ul> |

## 7. Objectives of the discipline (outcome of the acquired competencies)

|                                          |                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7.1 General objective of the discipline  | <ul style="list-style-type: none"> <li>• Emphasis the proper machine learning methods and techniques for solving real-world problems</li> </ul>                                                                                                                                                                                                                                                                     |
| 7.2 Specific objective of the discipline | <ul style="list-style-type: none"> <li>• This course is aimed to advance both theoretical and practical aspects of Machine Learning. The course aims to provide an overview of the discipline and its main areas. At the end of the course, students will understand the basic principles of machine learning and associated algorithmic approaches and have knowledge of machine learning applications.</li> </ul> |

## 8. Content

| 8.1 Course                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Teaching methods                                                                                                                                                               | Remarks |

| <p>Each student has to demonstrate that he has reached an acceptable level of knowledge and understanding of the field, that he is able to express the knowledge in a coherent form, that he has the ability to establish certain connections and to use the knowledge in solving some problems.</p> <p>To pass the exam you must:</p> <ul style="list-style-type: none"> <li>• at least 60% of the laboratory assignments are completed</li> <li>• an evaluation average (written exam, seminar, laboratory) to be above 5</li> </ul> |                                                                                                                                                                                                                   |                                                                                    |     |

## 11. Labels ODD (Sustainable Development Goals)<sup>2</sup>

*Not applicable.*

Date:  
**30.04.2025**

Signature of course coordinator  
  
**Lect. Dr. Bogdan MURSA**

Signature of seminar coordinator  
  
**Lect. Dr. Bogdan MURSA**

Date of approval:  
...

Signature of the head of department  
  
Assoc.prof.phd. Adrian STERCA

---

<sup>2</sup> Keep only the labels that, according to the [Procedure for applying ODD labels in the academic process](#), suit the discipline and delete the others, including the general one for *Sustainable Development* – if not applicable. If no label describes the discipline, delete them all and write „*Not applicable.*”.
