Detailed response to reviewer

First, I would like to thank the anonymous referee for carefully reading my manuscript and for the useful observations.

I revised my initial submission according to reviewer's indications (in blue below), and I have prepared a revised version of my manuscript.

Below please find a detailed response to the reviewer's observations.

Sincerely,

Hesam Mahzoon

I added three examples (see page 2) of the Geometric Function Theory. I denoted them by K_α, f_1 and f_2. The function K_α belongs to the class $S^*(\alpha)$, the function f_1 belongs to the class S_e^* and the function f_2 belongs to the class S_B^*.
