

Topics for Bachelor Graduation Examination valid starting with July 2017

Computer science specialization

Part 1. Algorithms and Programming (6 topics)

1. Search (sequential and binary), sorting (selection sort, bubble sort, quicksort). The backtracking method.
2. OOP concepts in programming languages (Python, C++, Java, C#): class and object, members of a class and access modifiers, constructors and destructors.
3. Relationships between classes. Derived classes and the inheritance relationship. Method overriding. Polymorphism. Dynamic binding. Abstract classes and interfaces.
4. Class diagrams and UML interactions among objects: Packages, classes and interfaces. Relations between classes and interfaces. Objects. Messages.
5. Lists. Maps. Specification of typical operations (without implementations)
6. Identify data structures and data types suitable (efficient) for solving problems (only the data structures specified at 5.). The use of existing libraries for these structures (Python, Java, C++, C#).

Part 2. Databases (3 topics)

1. Relational databases. First three normal forms of a relation.
2. Querying databases using relational algebra operators.
3. Querying relational databases using SQL (Select).

Partea 3. Operating systems (3 topics)

1. The structure of UNIX file systems.
2. Unix processes: creation and the fork, exec, wait system calls. Pipe and FIFO communication.
3. Unix Shell programming and basic Unix commands: cat, cp, cut, echo, expr, file, find, grep, less, ls, mkdir, mv, ps, pwd, read, rm, sort, test, wc, who.
