Nagy Adorján: Liferay

Abstract   Do you know what Liferay Portal is capable of and why is it so popular in the Open Source community?
With its 12 years of history from a CMS it became a Platform with many features and extension points. In this session we will run through some of the major features (Content management, Authentication, Staging, Document Management, Social, Collaboration, and more...) of an Out-of-the-box Liferay Portal to be able to setup it for your purpose, and will have a general overview on how to create new functions.
