

Note on a Korovkin-type theorem

Zoltán Finta

20.11.2014

Abstract

A new Korovkin-type theorem and its converse theorem are established. We compare our direct result with the Korovkin-type theorem given by Wang. As applications we obtain quantitative estimates for q -Bernstein-type operators which preserve the functions $e_0(x) = 1$ and $e_j(x) = x^j$.
